Re: Black Bayou Gas Storage, LLC
Docket No. CP24-___-000
Abbreviated Application for Certificate of Public Convenience and Necessity

Dear Secretary Reese:

Pursuant to Section 7(c) of the Natural Gas Act ("NGA"), 15 U.S.C. § 717f(c), and Parts 157, 284, and 380 of the regulations of the Federal Energy Regulatory Commission ("FERC" or "Commission"), 18 C.F.R. Parts 157, 284, and 380, Black Bayou Gas Storage, LLC ("Black Bayou") hereby submits an abbreviated application for: (1) a certificate of public convenience and necessity authorizing the construction and operation of a new natural gas storage facility in Louisiana, (2) blanket certificates, and (3) approval of market-based rates ("Application"). Black Bayou also requests limited waivers of certain regulations of the Commission, as set forth in the Application.

The enclosed Application consists of the following documents and materials, organized by volume:

- Volume I – Public: this volume consists of this transmittal letter, the Application, and Exhibits A, B, C, D, the public portion of Exhibit F-I (including the public versions of Resource Reports 1 through 12), Exhibit I, Exhibit P, Exhibit Z-1, and Exhibit Z-2.

- Volume II – Privileged: this volume consists of the privileged portion of Exhibit F-I that is non-public information under Section 388.112 of the Commission's regulations, 18 C.F.R. § 388.112.

- Volume III – CEII: this volume consists of the portions of Exhibits F-1, G, G-I, and G-II that contain critical energy infrastructure information that is non-public information under Section 388.113 of the Commission's regulations, 18 C.F.R. § 388.113.

The request for confidential treatment of Volumes II and III is in Section XIII of the Application and all non-public materials are marked in accordance with the Commission's regulations identified above.

Please contact the undersigned with any questions regarding this filing.

Respectfully submitted,

/s/ Emil J. Barth

ABBREVIATED APPLICATION OF BLACK BAYOU GAS STORAGE, LLC FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AUTHORIZING A NATURAL GAS STORAGE FACILITY, BLANKET CERTIFICATES, AND APPROVAL OF MARKET-BASED RATES UNDER SECTION 7 OF THE NATURAL GAS ACT

Pursuant to Section 7(c) of the Natural Gas Act, as amended ("NGA"),[1] and Parts 157, 284, and 380 of the regulations of the Federal Energy Regulatory Commission ("Commission" or "FERC"),[2] Black Bayou Gas Storage, LLC ("Black Bayou") respectfully submits this abbreviated application ("Application") and requests that the Commission grant:

1. A certificate of public convenience and necessity authorizing Black Bayou to construct, own, operate and maintain a salt dome natural gas storage project on the Black Bayou salt dome in Cameron Parish, Louisiana as further described in this Application and the Resource Reports provided as Exhibit F-I ("Project");

2. A blanket certificate pursuant to Subpart G of 18 C.F.R. Part 284 authorizing Black Bayou to provide open-access firm and interruptible interstate natural gas storage and storage-related services on behalf of others with pregranted abandonment for those services;

3. A blanket certificate pursuant to Subpart F of 18 C.F.R. Part 157 authorizing Black Bayou to construct, acquire, operate, and abandon certain facilities, in accordance with the Commission's regulations;

4. Authorization for Black Bayou to charge market-based rates for its proposed interstate storage services and hub services;

[1] 15 U.S.C § 717f(c).
[2] 18 C.F.R. Parts 157, 284, & 380 (2024) (referred to herein as the "Commission's regulations").

5. Approval of the *pro forma* FERC Gas Tariff contained in Exhibit P, pursuant to which Black Bayou will provide open access natural gas storage and hub services consistent with the Commission's policies; and

6. Waiver of the requirements of certain Commission regulations, as specified below, and any other waivers deemed necessary and appropriate by the Commission.

Black Bayou respectfully requests that the Commission grant the requested authorizations and waivers, and any others that may be deemed necessary to approve the Project as proposed here, by June 1, 2025.

I. INTRODUCTION AND BACKGROUND REGARDING THE PRIOR PROJECT

Black Bayou proposes to construct, own, operate, and maintain a high-deliverability salt dome natural gas storage facility on the Black Bayou salt dome in Cameron Parish and Calcasieu Parish, Louisiana. The Project will be located approximately 15 miles west of Hackberry, Louisiana and consist of four (4) salt storage caverns with a total working gas capacity of approximately 34.7 billion cubic feet ("Bcf"), a 44,000 horsepower ("hp") compressor station, two (2) 27.1-mile, 24-inch-diameter, looped bi-directional header pipelines interconnecting the Project's natural gas storage caverns to multiple interstate natural gas pipelines, and related facilities. The construction of the Project's natural gas storage caverns will involve the solution mining of four natural gas storage caverns in the Black Bayou salt dome. To create the natural gas storage caverns, Black Bayou will construct an onsite leaching plant and related facilities.

The Black Bayou salt dome is located seven (7) miles east of the Louisiana/Texas border, 18 miles north of the Gulf of Mexico coastline, and less than 25 miles from the growing industrial demand centers in Lake Charles, Louisiana and Port Arthur, Texas. The area around the Black Bayou salt dome historically has been used for oil and gas production activities, dating back to

1927 when the salt dome was discovered by Shell Oil Company.[3] The Project will utilize the Black Bayou salt dome to provide high turn natural gas storage services, and the Project's header pipelines will be interconnected to 10 interstate natural gas pipelines in the Gulf region, allowing the Project to provide the gas balancing needs of a broad range of customers interconnected to the natural gas grid, including gas-fired electric generation facilities, local distribution companies, LNG liquefaction and export facilities, natural gas producers, natural gas marketers, and others.

As explained in this Application and the Resource Reports attached as Exhibit F-I, authorizing the Project to provide natural gas storage and hub services in interstate commerce as proposed herein will not require any subsidization from existing customers, but instead will serve substantial market demand from new customers. Any potential impacts from the Project will be eliminated or mitigated, and thus any adverse impacts on nearby landowners, the environment, or existing natural gas pipelines or their ratepayers will be minimal. The Project, therefore, meets all of the criteria for approval set forth in the Commission's Certificate Policy Statement.[4]

Many of the Project facilities associated with this application have been before the Commission previously and approved. On July 26, 2006, in Docket No. CP06-396-000, the Commission granted Kaiser-Francis Oil Company ("Kaiser-Francis") an exemption from NGA Section 7(c) certificate requirements in authorizing certain temporary acts and operations for the limited purpose of testing the feasibility of a cavern storage project.[5] Under the terms of the exemption, Kaiser-Francis was authorized to drill a stratigraphic test well on the Black Bayou salt dome to confirm the physical integrity of the salt formation and the technical feasibility of locating

[3] Shell, along with its successors, have drilled for and produced oil and gas since the discovery of the salt dome, and production continues today.
[4] *Certification of New Interstate Nat. Gas Pipeline Facilities*, 88 FERC ¶ 61,227, *corrected*, 89 FERC ¶ 61,040 (1999), *clarified*, 90 FERC ¶ 61,128, *further clarified*, 92 FERC ¶ 61,094 (2000) ("Certificate Policy Statement").

a high-pressure storage facility there.[6] The test well was successfully completed in the fall of 2006, and the physical integrity of the Black Bayou salt dome was subsequently confirmed through geo-mechanical analysis.

On September 25, 2007, Black Bayou Storage, LLC ("Black Bayou Storage"), a subsidiary of Kaiser-Francis, filed an abbreviated certificate application with the Commission for the Black Bayou Storage Project (the "2007 Project") in Docket Nos. CP07-451-000, CP07-452-000, and CP07-453-000. The 2007 Project consisted of 14.9 Bcf of working gas storage in four (4) caverns; 18,940 hp of gas-fired compression; five (5) freshwater wells and associated piping; five (5) brine disposal wells and associated piping; approximately seven (7) miles of natural gas pipelines; and related facilities.

The Commission's Staff issued an Environmental Assessment for the 2007 Project on May 22, 2008, finding that approval of the "Project would not constitute a major federal action significantly affecting the quality of the human environment," and recommending that the Commission adopt a series of mitigation requirements as well as a finding of no significant impact.[7] The Commission adopted this finding on June 19, 2008 in granting a certificate of public convenience and necessity for the 2007 Project.[8] The Commission's certificate order also concluded that "granting authorization under section 7(c) of the NGA for Black Bayou's proposal is required by the public convenience and necessity,"[9] and that approving market-based rates was appropriate because Black Bayou Storage would lack market power.[10] Subsequently, for various

[8] *Black Bayou Storage, LLC*, 123 FERC ¶ 61,277, at P 69 (2008) (finding that "if constructed, replaced, abandoned, or operated in accordance with Black Bayou's application and supplements, and the conditions in Appendix B to this order, approval of this proposal would not constitute a major federal action significantly affecting the quality of the human environment.").
[9] *Id.*, at P 73.
[10] *Black Bayou Storage, LLC*, 123 FERC ¶ 61,277 at P 30 (2008).

market and commercial-related reasons, the 2007 Project was not constructed and the certificate expired in 2014.

In 2022, Kaiser-Francis and its partners sold approximately 2,500 acres, inclusive of the Black Bayou salt dome, to Cameron Prairie Sporting Club, LLC ("Cameron Prairie"). In 2023, Cameron Prairie leased an interest in 2,444 acres to Black Bayou Energy Hub, LLC ("Black Bayou Energy Hub") for the Project storage site. In 2024, Black Bayou Energy Hub leased an interest in the Project storage site to its wholly owned subsidiary, Black Bayou Gas Storage, LLC, which is filing this Application.

Under the lease arrangement, Black Bayou holds the exclusive lease for surface and subsurface rights within 300 feet of the outer edge of the Black Bayou salt dome, which includes 2,444 acres in total and wholly encompasses the storage area plus significant buffer acreage. As part of the lease, drilling for new production or other activities that could affect the Project is prohibited over or within the boundaries of the Black Bayou salt dome.

II. DESCRIPTION OF APPLICANT

The exact legal name of Black Bayou is Black Bayou Gas Storage, LLC. Black Bayou is a Louisiana limited liability company organized under the laws of Louisiana and a wholly owned subsidiary of Black Bayou Energy Hub, a privately held project development company based in Lafayette, Louisiana. Black Bayou's principal office is located at 229 Heymann Blvd., Lafayette, LA 70503.

Neither Black Bayou, nor any affiliate thereof, owns or operates any jurisdictional natural gas facilities or is a "natural gas company" within the meaning of Section 2 (6) of the NGA.

IV. DESCRIPTION OF THE PROPOSED PROJECT

A. Summary

The Project will provide approximately 34.7 billion cubic feet (Bcf) of underground natural gas working storage capacity using facilities to be located in Cameron Parish and Calcasieu Parish, Louisiana. The Project will include the construction and operation of four (4) natural gas storage caverns, one (1) compressor station, one (1) leaching plant, nine (9) freshwater wells, nine (9) saltwater disposal wells, associated piping and valve settings, and other appurtenant facilities. The

[11] Black Bayou respectfully requests waiver of Section 385.210(k)(i) of the Commission's regulations to the extent necessary so that all persons listed below will be placed on the official service list. Each identified person has responsibility for this Application on behalf of Black Bayou.

natural gas storage caverns will be supplied by two (2) 27.1-mile, 24-inch-diameter, looped bi-directional natural gas pipelines, referred to collectively as the "Header Pipelines," that will interconnect with existing and planned third-party interstate natural gas transmission pipelines. Facilities associated with the Header Pipelines include 10 meter stations and five (5) mainline valve sites.

The construction of the Header Pipelines is scheduled to begin in the third quarter of 2025, with the anticipated in-service date occurring in the first quarter of 2026, at which time Black Bayou proposes to commence providing wheeling services. The first two natural gas storage caverns (Cavern 1 and Cavern 2) are scheduled to be placed in service by fourth quarter 2028, with the remaining two natural gas storage caverns (Cavern 3 and Cavern 4) scheduled to be placed in service by fourth quarter 2030.

Facilities for the Project will be constructed and operated in one of two areas: an area referred to as the "Gas Storage Area" and the area associated with the Header Pipelines. The Gas Storage area is located on a site in southwest Louisiana, primarily in the northwest corner of Cameron Parish that is in a sparsely populated area, which is about 15 miles west of Hackberry, Louisiana and about 8 miles southeast of Orange, Texas. The facilities that will be constructed within the Gas Storage Area include:

- four (4) underground salt dome natural gas storage caverns (Cavern 1, Cavern 2, Cavern 3, and Cavern 4);
- an area within the Gas Storage area referred to as the "Central Operations Site" that will be located inside the Gas Storage Area, consisting of:
    - a 44,000-hp compressor station with eight Caterpillar 3616 (or similar) natural gas-driven reciprocating compressor engines at 5,500 hp per unit ("Compressor Station");
    - a brine leaching plant ("Leaching Plant"); and

  - two (2) of the four (4) storage caverns identified above. Cavern 1 and Cavern 2 will be located inside the Central Operations Site, and Cavern 3 and Cavern 4 will be located just outside of the Central Operations Site, but within the larger Gas Storage Area.

- nine (9) freshwater wells each located on its own pad, one of which is within the Central Operations Site;
- nine (9) saltwater disposal wells located on three (3) pads;
- permanent access roads ("PARs");
- associated piping and valve settings;
- an electrical area for electric supply ("Electrical Area");
- and additional auxiliary equipment as required for functionality.

As explained below in Section X, the Gas Storage Area will be constructed in an area that has been previously developed for industrial oil and gas operations over many decades. Black Bayou will utilize existing infrastructure and disturbed areas to the extent practicable, including improving facilities to minimize environmental impact.

The Header Pipelines will extend west and then north from the Gas Storage Area in Cameron Parish into Calcasieu Parish. The facilities that will be constructed in the area associated with the Header Pipelines include:

- the Header Pipelines, which, consist of two (2) 27.1-mile, 24-inch-diameter, looped bi-directional pipelines that will interconnect with existing and planned third-party interstate natural gas transmission pipelines;
- metering and regulation stations;
- mainline valve sites; and
- temporary access roads ("TARs") and PARs.

Approximately 24.1 miles, or 89 percent (89%) of the route of the Header Pipelines will be co-located with other utility corridors, thus minimizing the environmental impact of construction and operations.

A map depicting the location of the Project is provided below:

B. Jurisdictional Facilities

As further identified and described in Resource Report 1, the facilities subject to the Commission's jurisdiction include the following:

1. Gas Storage Area

Storage Cavern and Wells

The Black Bayou salt dome was discovered by the Shell Oil Company in 1927 during oil and gas exploration activities. The salt dome is located in a remote area of Cameron Parish, Louisiana. The Black Bayou salt dome is a virgin dome that has never been mined for brine or

used for storage of any kind. There are no other existing storage operations on the Black Bayou salt dome, so there will be no change or impact to any existing underground storage operations.

The Project will involve the solution mining of four (4) caverns to be used for natural gas storage. Each cavern will be solution mined to a total volume of approximately 12 million barrels. The Project will provide approximately 8.7 billion cubic feet of working gas capacity per cavern for a total of 34.7 Bcf of working gas capacity. Each cavern will require approximately 4.5 Bcf of base gas, also commonly referred to as pad gas or cushion gas, for operational pressure support, or approximately 18 Bcf of base gas in total. Overall, the Project will provide approximately 52.7 Bcf of total gas storage capacity. Because the storage facility will be located in an underground salt dome, there are no existing native gas volumes. The Project will provide up to 1.6 Bcf per day of maximum daily injection quantities at minimum operating cavern pressures, and up to 2.0 Bcf per day of maximum daily withdrawal quantities at maximum operating cavern pressures.

The proposed cavern well pad sites are located within and/or north of the Central Operations Site within the Gas Storage Area. The Cavern 1 well pad lies within the northeast boundary of the Central Operations Site and will be accessed directly from the Central Operations Site. The site for the Cavern 2 well pad lies within the west boundary of the Central Operations Site and will be connected via a 25-foot-wide, 500-foot-long continuation of the existing facility access road. The site for the Cavern 3 well pad lies approximately 790 feet northwest of the Central Operations Site and will be connected via a 25-foot-wide, 1,175-foot-long access road from the Central Operations Site. Finally, the site for the Cavern 4 well pad lies 775 feet north of Cavern 1 and will be connected via a 25-foot-wide, 670-foot-long continuation of the proposed access road to Cavern 3. The area used for drilling within the cavern well pads will be approximately 250-

foot by 360-foot each. Each pad will be surrounded by an earthen berm/dike, resulting in the total drilling footprint occupying an approximately 290-foot by 400-foot area.

The caverns, once created, will be roughly cylindrical, approximately 1,460 feet tall, and approximately 300 feet wide. The top of the caverns will be at an approximate depth of 3,800 feet below surface and 2,100 feet below the top of salt. The total depth of the caverns will be approximately 5,260 feet below the surface.

During natural gas injection and withdrawal operations, natural gas will be carried between each storage cavern and the Compressor Station by a 20-inch-diameter buried pipeline.

Compressor Station

The Compressor Station will house eight (8) natural gas-driven reciprocating units, each rated at 5,500 hp to produce an overall estimated output of 44,000 hp. The units will be Caterpillar G3616 A4 drivers or equivalent with Ariel KBZ compressor frames or equivalent. The Compressor Station will be located on a part of the Gas Storage Area that consists primarily of open ground and a previously disturbed area on which an existing oil processing facility is located. The compressor station will be used to receive and compress gas from the Header Pipelines for injection into the caverns via 20-inch-diameter cavern pipelines and to deliver gas back into the Header Pipelines and third-party pipelines. The facilities inside the Gas Storage Area, including the Compressor Station, will be capable of the following operations: (1) receipt of pipeline gas and compression and injection of that gas into storage; (2) free flow of gas to storage when cavern pressure allows; (3) withdrawal, dehydration, and delivery of cavern gas to the Header Pipelines and third-party pipelines; (4) withdrawal, dehydration, compression, and delivery of cavern gas to the Header Pipelines and third-party pipelines when cavern pressure requires; and (5) receipt of gas from third-party pipelines and redelivery to third-party pipelines (wheeling).

Leaching Plant

The Leaching Plant will be located west of the compressor station within the Central Operations Site. The purpose of the Leaching Plant is to provide raw water to the salt dome caverns at the pressure and flow rate required for solution mining. The Leaching Plant will include storage tanks for raw water and brine to separate suspended solids from brine prior to disposal. Electric motor-driven pumps will be skid mounted and installed in a metal pump house along with a motor control center. The design rate is 7,000 gallons per minute for injection and disposal. Suspended solids will be separated from the returned brine. Brine will be piped to Black Bayou's brine disposal well pads for subsurface disposal through the nine (9) wells described below. A truck loading facility will be included to allow for the removal of the suspended solids from the Leaching Plant and transportation to an off-site disposal facility.

Freshwater Supply Wells

Nine (9) freshwater supply wells are proposed. Each freshwater supply well pad will contain one (1) well and consist of approximately 0.3 acre and will be covered with gravel, limestone, or similar materials. Each freshwater well pad will be located within one (1) mile of the Central Operations Site. The proposed freshwater supply well sites are primarily located on or directly adjacent to former oil and gas well pads or facilities, making use of previously disturbed, industrial areas of upland fill. The freshwater well pads will typically be 100-foot by 100-foot with the freshwater well located near the center of the pad.

The source of water for each freshwater well will be the slightly briny 700-foot Chicot aquifer. Each freshwater supply well will be capable of supplying 1,000 gallons per minute and will be equipped with an electric motor-driven submerged pump with capacity between 75 and 150 hp, a manual block valve, and a check valve. Each freshwater supply well will be drilled to a

total depth of about 1,050 feet or about 50 feet below the base of the withdrawal interval. A 16-inch production casing string will be cemented to approximately 600 feet or just above the Chicot Aquifer withdrawal interval.

Saltwater Disposal Wells

Brine produced by the solution mining process will be disposed of through nine (9) saltwater disposal wells. Three (3) saltwater disposal wells will be located on each of three (3) saltwater disposal well pads. Each of the three (3) saltwater disposal well pads will be gravel covered and accessed directly from existing gravel covered roads. Two (2) of the saltwater disposal well pads (SWD 1 and SWD 2) are located in areas of previous industrial operations. All brine handling equipment will be located at the centrally located Leaching Plant, rather than at the saltwater disposal sites, in order to facilitate 24/7 surveillance during operations.

The saltwater disposal well pads will be approximately 250-foot by 100-foot and will be elevated above the existing ground surface. Each saltwater disposal well will contain a nine and five-eights (9 5/8)-inch casing string cemented to an approximate depth of 7,500 feet. A seven (7)-inch injection tubing string will be set at approximately 2,900 feet or just above the injection interval. Brine injection will take place in Miocene and Frio age sands as shallow as 3,000 feet and as deep as 7,500 feet. The exact injection interval will depend on injection tests that will be run on each well as it is completed.

Freshwater Pipelines

Fresh water from each of the Project's nine (9) freshwater wells will be carried to the Leaching Plant by a network of eight (8)-inch, 12-inch, 16-inch, and 20-inch diameter supply pipelines. The eight (8)-inch-diameter pipelines will be run from each freshwater well location to larger diameter branch pipelines. Branch pipelines will connect fresh water from well locations

and collectively transport fresh water to the leaching plant. The pipelines will be installed aboveground on structural steel supports alongside existing access roads. Where possible, the pipelines will share the same supports as the brine disposal pipeline running from the Leaching Plant to the saltwater disposal wells. Fresh water for solution mining will be carried from the Leaching Plant to each of the storage cavern sites by an aboveground 16-inch-diameter pipeline.

Brine Return and Saltwater Disposal Pipelines

Brine from the solution mining process will be carried to the Leaching Plant from each storage cavern by an aboveground 12-inch-diameter pipeline. Each cavern will have its own dedicated single brine pipeline. Brine from the Leaching Plant will be carried to the saltwater disposal wells through a network of 12-inch-diameter and 20-inch-diameter pipelines. The saltwater disposal pipeline system will be installed aboveground on structural steel supports alongside existing access roads that will be used as PARs for the Project.

Other Facilities within the Gas Storage Area

Other facilities within the Gas Storage Area include pig launcher/receiver assemblies for each of the Header Pipelines; pressure regulator equipment; filter separators; one (1) two (2)-inch-diameter, one (1)-mile aboveground instrument air pipeline system to cavern well locations; dehydration equipment; a backup generator; additional auxiliary equipment as required for functionality; approximately 67.4 acres of PAR; and an office building.

2. Header Pipelines

The two Header Pipelines, referred to as North A and North B respectively, will connect the Gas Storage Area with third-party pipelines, allowing gas to be received from and delivered to the pipeline system. Both of the North A and North B Header Pipelines will be 24-inch-diameter, 27.1-mile-long natural gas pipelines. The Header Pipelines will extend west then north from the Central Operations Site for approximately 27.1 miles to the proposed interconnect location in

Sections 16 and 17, Township 8 South, Range 12 West, Calcasieu Parish, Louisiana. The Header Pipelines will be installed using a five (5)-foot offset from each other with the exception of horizontal directional drill ("HDD") and bore locations, where the offset will be increased to approximately 25 feet to allow for minor drill and bore deviations during installation. As noted above, approximately 24.1 miles, or 89 percent (89%) of the route of the Header Pipelines will be co-located with other utility corridors. The Header Pipelines will have five (5) mainline valves.

The Project will have interconnects with 10 existing and planned interstate pipelines: Port Arthur Pipeline, LLC - Louisiana Connector Project; Kinder Morgan Louisiana Pipeline LLC; Sabine Pipe Line LLC; Florida Gas Transmission Company, LLC; Venture Global CP Express, LLC; Tennessee Gas Pipeline Company, L.L.C.; Golden Pass Pipeline LLC; Texas Eastern Transmission, LP; Transcontinental Gas Pipe Line Company, LLC; and Gulf Run Transmission, LLC. Black Bayou proposes to construct 10 meter stations sites to tie-in to existing third-party pipelines. Each of the metering stations will include automated 24-inch block valves, metering equipment, flow control with pressure override, and pipeline connections.

In addition to the pig launcher/receiver assemblies for each of the Header Pipelines located in the Gas Storage area, a standalone launcher/receiver site will be located at the northern terminus of the Header Pipelines.

C. Non-Jurisdictional Facilities

Electrical Area

A 1.4-acre Electrical Area located at the Central Operations Site within the Gas Storage Area will be constructed abutting the northeast boundary of the Central Operations Site. The Electrical Area will receive electrical supply through a 230 kilovolt (kV) overhead transmission line that will be constructed by the local service provider, Entergy Corporation (Entergy). The Electrical Area will provide a 13.8 kV output, which will be converted to a lower voltage as

necessary for the Central Operations Site. Electricity will be delivered to these facilities through an underground electrical cable.

D. Land Requirements

Construction of the Project will result in a total of approximately 669.6 acres of disturbance. Following construction, a total of 381.7 acres of land will be allowed to revert to previous conditions. The remaining 288.4 acres of land will be retained for aboveground facilities or the permanent pipeline right-of-way.

1. Gas Storage Area

The Gas Storage Area includes three (3) saltwater disposal well pads, four (4) cavern well pads, nine (9) freshwater well pads, the Compressor Station, the Leaching Plant, the Electrical Area, and affiliated access roads encompassing a total of 114.7 acres that will be used for construction. 109.8 acres will be maintained for operation. The permanent operational land requirements reflect the total acreage within the fence line and any adjoining maintained buffer zone of each new facility and, as such, will include open maintained areas as well as the actual footprint of new aboveground structures.

As discussed above, Black Bayou holds the exclusive lease for surface and subsurface rights within 300 feet of the outer edge of the salt dome, which is approximately 2,444 acres in total and wholly encompasses the Gas Storage Area plus additional buffer acreage.

2. Header Pipelines

Construction of the Header Pipelines and associated facilities will impact 554.9 acres, with 178.6 acres being converted for permanent aboveground facilities or maintained within the permanent pipeline right-of-way. Permanent disturbances include the permanently maintained right-of-way centered on the existing and new pipelines, along with the aboveground facilities and permanent driveways. The majority of the permanently maintained right-of-way will be allowed

to revert to pre-construction conditions (primarily agricultural use and wetland) following construction.

The Header Pipelines will be located entirely on and cross only private land. They will cross certain public waterways, including an HDD crossing under the Gulf Intracoastal Waterway, which is maintained by the U.S. Army Corps of Engineers as a federal navigation channel. For private land, Black Bayou will work with property owners to establish necessary easement agreements. For the aboveground facilities, Black Bayou will obtain easement agreements or will purchase the land.

V. ENGINEERING AND CONSTRUCTION

Black Bayou will oversee and manage the design, engineering, and construction of the Project. Black Bayou's parent company, Black Bayou Energy Hub, is a privately held project development company. The management team of Black Bayou has extensive experience in the development and operation of interstate natural gas storage projects. Members of the management team also have been actively participating in development activities on and around the Black Bayou salt dome area for a number of years prior to the formation of Black Bayou and are thoroughly familiar with the location. In addition, Black Bayou has retained Wood Group PLC, WSP Global Inc., and Environmental Resources Management ("ERM") to assist in the design, engineering, and environmental review of the Project, including the preparation of this Application and the attached Resource Reports.

Following Project approval, Black Bayou will retain qualified, experienced contractors to construct the facilities. In accordance with Section 157.14 (a)(10)(vi) of the Commission's regulations. Black Bayou hereby certifies that it will design, install, inspect, test, construct, operate, replace and maintain the facilities for which a certificate is being requested herein in accordance with Federal safety standards and plans for maintenance and inspection. All facilities

will meet or exceed the safety standards required pursuant to the Natural Gas Pipeline Safety Act of 1968, as amended,[12] and the Department of Transportation's pipeline construction and safety standards set forth in *Transportation and Other Gas by Pipeline: Minimum Federal Safety Standards*, 49 C.F.R. Part 192. The Project will also be designed, constructed, tested, operated, and maintained to conform with or exceed the requirements set forth in Section 157.206(d) of the Commission's regulations – *Guidelines to be Followed by Natural Gas Pipeline Companies in the Planning, Clearing, and Maintenance of Rights-of-Way and the Construction of Aboveground Facilities.* Black Bayou will also comply with all applicable requirements of the Louisiana Department of Natural Resources pertaining to the drilling of gas storage injection and withdrawal wells and the operation and periodic confirmation of the integrity of the Project's caverns. In addition, Black Bayou's facilities will comply with all other applicable federal, state, and local regulations and requirements.

In addition to the above-referenced requirements, construction of the Project will be performed in accordance with the Commission's *Upland Erosion Control, Revegetation and Maintenance Plan* ("Plan") and *Wetland and Waterbody Construction and Mitigation Procedures* ("Procedures"). Black Bayou proposes to use the Commission's Plan and Procedures with certain modifications to accommodate Project-specific conditions. These modifications are discussed more fully in Section 1.7.5, Modifications to the Federal Energy Regulatory Commission Plan and Procedures, of Resource Report 1. In addition, Black Bayou will follow the construction requirements set forth in the Project's Spill Prevention, Control, and Countermeasures Plan.

Black Bayou is committed to constructing and operating the Project in a manner that minimizes environmental impacts and complies with applicable permits and approvals. The

[12] 49 U.S.C § 60101, *et seq*.

environmental guidelines and requirements found in federal, state, and local authorizations for the Project, along with the Commission's Plan and Procedures, will be incorporated into specifications and drawings issued with construction bid packages. This measure will provide prospective contractors with an awareness of Project-specific environmental concerns. The construction contractor will be provided with copies of the FERC certificate and notice to proceed, environmental permits, and other pertinent regulatory documents.

VI. PUBLIC CONVENIENCE AND NECESSITY

The Certificate Policy Statement sets forth the standard that the Commission applies in determining whether there is a need for a proposed project and whether the proposed project is in the public interest and will serve the public convenience and necessity. Under the Certificate Policy Statement, the Commission applies the following criteria: (1) whether the applicant is prepared to financially support the project without relying on subsidization from its existing customers, which is a threshold determination; (2) whether the applicant has made efforts to eliminate or minimize any adverse effects the project might have on the applicant's existing customers, existing pipelines in the market and their captive customers, and landowners and communities affected by the route of the new facilities; and (3) if any residual adverse effects on the foregoing groups are identified after efforts have been made to minimize them, the Commission will evaluate the project by balancing the evidence of public benefits to be achieved against any residual adverse effects, which "is essentially an economic test."[13] If the applicant demonstrates that these criteria are satisfied, then the Commission will complete the environmental analysis in which other interests are considered.

[13] *See, e.g.*, *Golden Triangle Storage, LLC*, 186 FERC ¶ 61,037, at PP 7-8 (2024); *LA Storage, LLC*, 180 FERC ¶ 61,188, at PP 17-18 (2022), *order on reh'g*, 182 FERC ¶ 61,026 (2023); *Wash. 10 Storage Corp., S. Romeo Gas Storage Co.*, 175 FERC ¶ 61,051, at PP 9-10 (2021).

With respect to the first criteria, Black Bayou is a newly formed entity which has no existing operations and no existing customers. It follows, therefore, that the Project is not seeking or relying upon subsidization from existing customers.[14] Black Bayou also is seeking market-based rate authorization and, as a result, will bear all of the financial risks of the Project, including with respect to any unsubscribed capacity. As shown in Section VII.A below, the need for the Project is demonstrated by the need in the Gulf Coast natural gas market for the Project's safe, reliable, high-turn natural gas storage capacity, which will enable Black Bayou to provide necessary storage, parking, loaning, and wheeling services to meet the increasing natural gas system balancing needs of power generators, local distribution companies, LNG exporters, natural gas pipelines, natural gas producers, and residential, commercial, and industrial natural gas consumers. As discussed in Section VII.B below, the need for the Project is also demonstrated by the customer demand for services offered during the Project's open season and subsequent ongoing contracting process, including one already-executed binding precedent agreement for eight (8) Bcf of Firm Storage Service with a Foundation Customer.[15] For these reasons, the Project meets the no-subsidy criteria, and there is demonstrated need for the Project.

With respect to the second criteria, Black Bayou demonstrates below in Section X and in the Resource Reports that it has eliminated, mitigated, and minimized any adverse effects from the Project on landowners and nearby communities. The nearest communities to the Black Bayou salt dome are Orange, Texas, which is approximately 8 miles to the northwest, and Hackberry, Louisiana, which is approximately 15 miles to the east. Given these distances, the construction

[14] *See, e.g., Ruby Pipeline, L.L.C.*, 128 FERC ¶ 61,224 at P 19 (2009), *order on reh'g*, 131 FERC ¶ 61,007 (2010), *reh'g denied*, 133 FERC ¶ 61,015 (2010).

[15] *See* Certificate Policy Statement, 88 FERC ¶ 61,227 at p. 61,748 (stating that executed precedent agreements "constitute significant evidence of demand for the project"); *see also LA Storage, LLC*, 180 FERC ¶ 61,188, at P 20 (demonstration of project need shown by an executed precedent agreement for a "substantial amount of the firm storage service made available by the project").

and operation of the Project is expected to have minimal impact on either of these communities. The Project is also located in an area that has long been used for oil and gas production, and the proposed facilities will be constructed in sparsely populated areas. The Gas Storage Area is located on property exclusively leased to Black Bayou. With respect to the Header Pipelines, the right-of-way will substantially follow existing utility corridors. Black Bayou will negotiate with landowners to acquire the necessary property rights for the Header Pipelines prior to construction. Additionally, as discussed in Section IX, Black Bayou has already initiated a public and stakeholder outreach program and will continue to work cooperatively with federal, state, and local officials, as well as landowners and other affected stakeholders to address their concerns and minimize adverse impacts.

Also with respect to the second criteria, the Project has no existing customers, is a new entrant into a competitive market, and will not adversely impact any market-area storage capacity. As shown in the market power analysis discussed below in Section VIII, Black Bayou will be a new entrant in a competitive storage market and will not have the ability to compete unfairly with any existing pipelines or storage providers, many of which have been authorized to charge market-based rates. To the contrary, Black Bayou will provide new incremental capacity and storage services that will increase competitive alternatives available in the market.[16] Thus, Black Bayou submits that its Project will have no adverse impacts on competing pipelines, storage providers, or their customers.

With respect to the third criteria, the demonstrated benefits from constructing and operating a new safe, reliable, high-turn natural gas storage capacity as proposed by Black Bayou

[16] Certificate Policy Statement, 88 FERC ¶ 61,227, at p. 61,748 (finding that the Commission does not need to protect competitors from the effects of competition, provided that such competition is fair); *see also Ruby Pipeline, L.L.C.*, 128 FERC ¶ 61,224, at P 37 (finding that a project meets the Commission's standard if "any adverse impacts of the proposal on competing pipelines and their existing customers will be the result of fair competition").

include: the availability of new, incremental capacity that will serve to help ensure gas and electric market reliability; support for the overall transition to sustainable renewable electric generation growth by serving the balancing needs of peaking facilities that work together with intermittent renewable resources; and provision of needed services to LNG export terminals and liquefaction facilities. These benefits are discussed in Section VII below. The Project will also have a positive socioeconomic benefit in the form of jobs, investment, and tax revenues, as documented in Resource Report 5. Given the substantial efforts to mitigate, minimize, and eliminate environmental impacts as discussed in Section X and the Resource Reports, the demonstrated benefits of the Project outweigh any adverse effects on landowners and the surrounding communities.

For all of these reasons, the Project satisfies the criteria set forth in the Certificate Policy Statement, is in the public interest, and will serve the public convenience and necessity.

VII. PROJECT NEED AND OPEN SEASON

A. Policies Supporting New Storage Capacity and Need for Storage Capabilities

The Commission has long recognized the importance of storage in serving our nation's energy needs. For example, on September 30, 2004, the Commission's Staff issued a report in Docket No. AD04-11-000 entitled *Current State of and Issues Concerning Underground Natural Gas Storage*, which identified storage as a key element in our energy infrastructure and emphasized the need to encourage the development of new storage capacity. This policy has been reiterated by the Commission in subsequent orders approving new storage projects or expansions of existing projects and in additional reports discussed below.[17]

[17] *See, e.g.*, *Texas Gas Transmission, LLC*, 122 FERC ¶ 61,190 P 26 & n. 25 (2008); *El Paso Natural Gas Co.*, 114 FERC ¶ 61,341 at P 6, n. 6 (2006); *Liberty Gas Storage, LLC*, 127 FERC ¶ 61,221 at P 9 & n. 3 (2009), *vacated on other grounds*, 162 FERC ¶ 61,118 (2018).

The need to encourage storage development was specifically recognized by Congress in the Energy Policy Act of 2005, where it authorized the Commission to grant market-based rates for new storage projects even if the sponsors could not show that they lacked market power.[18] The Commission adopted regulations implementing that authority in Order Nos. 678 and 678-A,[19] acknowledging, among other things, the need "to facilitate the development of new natural gas storage capacity to ensure that adequate storage capacity will be available to meet anticipated market demand and to mitigate natural gas price volatility."[20]

The Project is fully consistent with these policy goals, and there is demonstrated need for the Project's services. The Project will provide safe, reliable, high-turn natural gas storage capacity to the Gulf Coast natural gas market. When complete, the Project will provide approximately 34.7 Bcf of working gas storage capacity, with up to 1.6 Bcf of peak daily natural gas injection capability, and up to 2.0 Bcf of peak daily natural gas deliverability. The Project will provide necessary storage, parking, loaning, and wheeling services to meet the increasing natural gas system balancing needs of power generators, local distribution companies, LNG exporters, natural gas pipelines, natural gas producers, and residential, commercial, and industrial natural gas consumers. The Project will provide essential balancing services to customers throughout the Gulf Coast region via interconnections with existing and planned third-party interstate natural gas pipelines.

The Project will provide highly flexible natural gas storage, wheeling and balancing services, with an ability to cycle between injection and withdrawal services on short notice, thereby balancing market dislocations of supply and demand, and helping to reduce natural gas price

[18] Energy Policy Act of 2005, Public Law No. I09-58, § 312 (2005).
[19] *Rate Reg'l. of Certain Nat. Gas Storage Facilities*, Order No. 678, 115 FERC ¶ 61,343, *order on clarification and reh'g*, Order No. 678-A, 117 FERC ¶ 61,190 (2006).
[20] Order No. 678, 115 FERC ¶ 61,343, at P 10.

volatility. The Project's high deliverability will allow customers to safely withdraw gas during periods of high demand or lost supply, such as has been seen in recent winter storms, and deliver that gas to essential human needs markets. Federal, state, and local agencies and legislators have recognized the critical role storage has played in increasing reliability by assisting natural gas pipelines and shippers in meeting their obligations. One factor that contributed to the rolling blackouts that occurred during Winter Storm Uri, which occurred in February 2021, was that natural gas withdrawals from regional natural gas storage facilities were insufficient to meet the surge in natural gas deliverability requirements caused by the simultaneous surge in natural gas heating demand and coincident loss of natural gas production due to freeze-offs at the wellhead. The Commission, the North American Electric Reliability Corporation, and Regional Entity Staff issued a report analyzing the cold weather outages during Winter Storm Uri and recommended, among other measures, additional investments in strategic natural gas storage facilities, recognizing that such additional storage volumes would help to stabilize the natural gas market, and thereby reinforce resiliency on the South Central U.S. bulk electric system, during supply shortfalls.[21] A subsequent report issued after Winter Storm Elliott, which occurred in December 2022, acknowledged the critical role served by natural gas storage, stating gas demand was met by "increasing withdrawals from natural gas storage" and that storage was "instrumental in preventing more adverse outcomes on both the natural gas infrastructure system and the grid."[22] The primary role of natural gas storage is to provide safe and reliable flexibility and optionality to natural gas

[21] Federal Energy Regulatory Commission, North America Electric Reliability Corporation, & Regional Entities, *The February 2021 Cold Weather Outages in Texas and the South-Central United States* (Nov. 2021), at 119-21 & 234-35 *available at*: https://www.ferc.gov/media/february-2021-cold-weather-outages-texas-and-south-central-united-states-ferc-nerc-and.

[22] Federal Energy Regulatory Commission, North America Electric Reliability Corporation, & Regional Entities, *Inquiry into Bulk-Power System Operations During December 2022* (Oct. 2023), at 75-76 & 122 *available at*: https://www.ferc.gov/news-events/news/ferc-nerc-release-final-report-lessons-winter-storm-elliott

producers and consumers to help balance market dislocation, and that is the purpose the Project will provide to the market.

The Project's high-turn working gas capacity will also aid in the overall transition to sustainable renewable electric generation growth by providing seasonal, monthly, daily and intra-day balancing needs to peaking natural gas-fired power generators. The balancing services of natural gas storage are required to support the intermittent nature of the growing renewable generation load and ensure a reliable power generation system. The EIA has stated that natural gas-fired peaking plants are "critical in markets with an increasing concentration of intermittent renewable generation."[23] Peaking natural gas-fired generation requires daily and hourly balancing services, which are provided largely by natural gas storage facilities, and in particular, underground salt dome storage facilities.

The Project will also provide natural gas producers with high-deliverability natural gas storage services to provide supply into market areas when disruptions to upstream production and transportation occur. As discussed above, in Order No. 678, the Commission found that there was a need "to facilitate the development of new natural gas storage capacity to ensure that adequate storage capacity will be available to meet anticipated market demand and to mitigate natural gas price volatility."[24] The Project will do exactly that. Natural gas delivered from natural gas storage can supplement and be substituted for upstream pipeline capacity, and mitigate the adverse effects of upstream power outages, pipeline compressor outages and other temporary capacity constraints that cause grid reliability issues and spikes in natural gas prices.

[23] U.S. Energy Information Admin., 2024. *Use of Natural Gas-Fired Generation Differs in the United States by Technology and Region* (Feb. 22, 2024), *available at*: https://www.eia.gov/todayinenergy/detail.php?id=61444.
[24] Order No. 678, 115 FERC ¶ 61,343, at P 10.

Finally, the Project will provide flexible supply options and mitigate disruptions in natural gas consumption tied to LNG export terminal operations. The Project is within 25 miles of over 30 Bcf/d of existing and planned LNG export terminal operations whose facilities require high rates of injection provided by salt dome storage facilities to optimize and balance LNG terminal operations and functionality. Additional natural gas storage is necessary to support natural gas grid reliability and the growing operational balancing challenges associated with LNG liquefaction facilities. The demand for flexible, high injection and withdraw storage capacity in the Gulf Coast area is only expected to increase substantially over the next 25 years,[25] and the Project is optimally situated to serve the gas supply and balancing needs of those LNG terminals.

B. The Open Season Demonstrates Market Demand for the Project

The need for the Project is demonstrated by the customer demand for services offered during the Project's open season and subsequent contracting process. Black Bayou has executed one binding precedent agreement for eight (8) Bcf of Firm Storage Service with a Foundation Customer. Subsequently, Black Bayou held a non-binding open season for capacity. The open season began on June 6, 2024, and concluded on June 27, 2024. The open season was advertised on the company website and in industry publications, as well as direct marketed to industry participants. The open season solicited non-binding bids for 16 Bcf or more of working gas capacity. In total, Black Bayou received 35 bids for capacity from 32 unique counterparties totaling 69.8 Bcf of working gas capacity, or over four times the capacity offered in the open season. Black Bayou received bids from a wide range of counterparties including integrated oil and gas companies, LNG operators and shippers, regulated natural gas and electric utilities, natural

[25] U.S. Energy Information Admin., *U.S. Natural Gas Production and LNG exports Will Likely Grow through 2050 in AEO2023* (Apr. 27, 2023). *available at:* https://www.eia.gov/todayinenergy/detail.php?id=56320#:~:text=Because%20the%20Haynesville%20Formation%20and,as%20LNG%20demand%20has%20grown.

gas pipeline companies, natural gas producers, natural gas marketers, natural gas end users and other market participants.

The executed binding precedent agreement and the robust results of the open season demonstrate a substantial need for the Project in this geographic area. As a result of the magnitude of the open season bids, Black Bayou increased the size of the Project from two (2) caverns to four (4) caverns to better accommodate market demand. Black Bayou now is in the process of working with the open season participants to allocate capacity and execute additional binding precedent agreements for the Project's available working gas capacity. Because confidential commercial negotiations remain ongoing and the possibility that there may be additional Foundation Customer agreements that could require the exercise of Foundation Shipper rights, Black Bayou is only filing a copy of the open season notice as part of the Application as Exhibit I-I. Black Bayou commits to filing as soon as possible the executed binding Foundation Customer precedent agreement and additional binding precedent agreements once it has concluded the contracting process for the open season.

VIII. REQUEST FOR MARKET-BASED RATE AUTHORIZATION

Black Bayou is requesting authorization to charge market-based rates for its storage and hub services as a new entrant to the market. In support of that request, a market power analysis prepared by Mr. Alexander Kirk of Brown, Williams, Morehead, & Quinn, Inc. ("BWMQ") is attached as Exhibit I. Mr. Kirk's market power analysis is comprised of: Exhibit No. BBGS-0001, which is Mr, Kirk's Prepared Direct Testimony; Exhibit No. BBGS-0002, which is Mr. Kirk's curriculum vitae; and Exhibit No. BBGS-0003, which is the Market Power Study prepared by BWMQ and includes supporting maps, data, and information. This analysis demonstrates that Black Bayou lacks market power in the provision of firm and interruptible storage, storage-

derivative hub services, and wheeling services in the relevant markets and therefore should be granted permission by the Commission to charge market-based rates for these proposed services.

Under the Commission's Alternative Rate Policy Statement,[26] the Commission determines whether the applicant for market-based rates can withhold or restrict services and, as a result, increase price by a significant amount for a significant period of time, or discriminate unduly in price or terms and conditions of service. The Commission's analysis consists of three major steps: (1) determination of whether the applicant has specifically and fully defined the relevant markets to determine which specific products or services are identified and the suppliers of the products and services that provide good alternatives to the applicant's ability to exercise market power, which includes identification of the relevant geographic market, (2) assessment of market share and market concentration, including use of the Herfindahl-Hirschman Index ("HHI") as screens, and (3) evaluation of other relevant factors such as ease of entering the market.

Mr. Kirk's analysis demonstrates that Black Bayou fully meets the criteria for granting authorization for market-based rates. The relevant geographic market was identified conservatively as the Gulf Coast Production Area, which is limited to limited to east Texas, Louisiana, Mississippi, and Alabama, and excludes other neighboring areas such as West Texas and the Midcontinent. With respect to Black Bayou's proposed new storage and storage derivative hub services, Mr. Kirk and the Market Power Study conclude that:

- The proposed new services are in a highly competitive market where numerous alternatives exist.

[26] *Alts. to Traditional Cost-of-Serv. Ratemaking for Nat. Gas Pipelines*, 74 FERC ¶ 61,076, *reh'g denied*, 75 FERC ¶ 61,024 (1996), *petitions for review denied and dismissed sub nom. Burlington Res. Oil & Gas Co. v. FERC*, 172 F.3d 918 (D.C. Cir. 1998) ("Alternative Rate Policy Statement"), *criteria modified*, Order No. 678, 115 FERC ¶ 61,343, *order on clarification and reh'g*, Order No. 678-A, 117 FERC ¶ 61,190.

- In the Gulf Coast Production Area, Black Bayou's working gas capacity and daily deliverability market shares are 0.6 percent and 2.7 percent, respectively, well below levels accepted by the Commission in other market-based rate proceedings. Therefore, Black Bayou cannot exercise market power acting alone.
- In the Gulf Coast Production Area, the market concentration estimates (i.e., HHIs) computed on working gas capacity and daily deliverability are 251 and 523, respectively, well below the Commission's 1800 HHI threshold, indicating that Black Bayou acting together with other competing storage providers cannot exercise market power.
- Other relevant factors pertaining to storage, such as ease of entry, growing natural gas production and Black Bayou is a new entrant into an already competitive market, mitigate any remaining market power concerns.

With respect to Black Bayou's proposed new firm and interruptible wheeling services, Mr. Kirk and the Market Power Study conclude:

- Black Bayou will enter a highly competitive market where numerous wheeling alternatives exist for potential customers.
- Black Bayou has a market share of 5.3 percent for receipt capacity and a market share of 4.9 percent for delivery capacity in the Gulf Coast Production Area, indicating that Black Bayou cannot exercise market power acting alone.
- The HHIs computed on hub receipt capacity and delivery capacity of 1142 and 1102, respectively, are below the Commission's 1800 HHI threshold, indicating that Black Bayou acting together with other competing hub providers cannot exercise market

power in the provision of interruptible wheeling services in the Gulf Coast Production Area.

- The Market Power Study's bingo card analysis demonstrates that there are alternatives for each of Black Bayou's wheeling services. The bingo card is completely "filled-in," and the presence of many alternatives indicate that Black Bayou cannot exercise market power in the provision of wheeling services in the Gulf Coast Production Area.
- Other relevant factors pertaining to wheeling, such as ease of entry, the additional competition from market center operations, and that Black Bayou is a new entrant into an already competitive market, further mitigate any remaining market power concerns.

Based on this analysis, Black Bayou requests that the Commission find that Black Bayou cannot exercise market power in the Gulf Coast Production Area and grant Black Bayou market-based rate authority for its proposed firm and interruptible storage services, storage derivative hub services, and firm and interruptible wheeling services. Consistent with the requirements of Section 284.504 of the Commission's regulations, Black Bayou will separately account for all costs and revenues associated with facilities used to provide the market-based services and notify the Commission within 10 days of acquiring knowledge of significant changes occurring in its market power status.

IX. LANDOWNER NOTIFICATION AND COMMUNITY OUTREACH

In accordance with the requirements of Section 157.6(d) of the Commission's regulations, Black Bayou has identified and will provide notice of the Project to all affected landowners within three (3) business days of the Commission's issuance of a public notice of this Application. The names and mailing addresses of the landowners are listed in Appendix 1.E of Resource Report 1. This information has been designated as Privileged pursuant to Section 388.112 of the

Commission's regulations. In accordance with Section 157.6(d), Black Bayou will also publish a notice of this Application twice in a local newspaper within two weeks of the Application's filing date. In accordance with Section 157.10(c), Black Bayou will make a copy of this Application available to the public at public libraries located within Cameron and Calcasieu Parishes, Louisiana.

With respect to community outreach, Black Bayou has contacted and spoken with all landowners directly affected by the Project as part of pre-application survey efforts. In working with the landowners on survey efforts, Black Bayou has given an overview of the Project and provided preliminary routing and impact descriptions to landowners along the pipeline route. Black Bayou also has contacted all abutting landowners to make them aware of the Project and its potential impact on their property. In addition to the survey outreach, Black Bayou held meetings with each landowner abutting the Gas Storage Area in Cameron Parish to discuss the Project and answer questions regarding impacts from the facilities.

Black Bayou also held two (2) informational meetings in early June which were open to the public and allowed access to the Project team to address any questions about the Project. The meetings were held in Hackberry, Louisiana (Cameron Parish) and were attended by approximately 55 people. Prior to the meetings, Black Bayou mailed Project fact sheets to landowners within 0.25 mile of the Project within Cameron Parish. Attendees generally voiced support for the Project and inquired how local businesses could become involved and benefits to the community. Two additional public informational meetings are planned for the third quarter of 2024 in Starks, Louisiana (Calcasieu Parish).

Black Bayou maintains a Project website (https://blackbayouenergyhub.com) which includes an overview of the Project and contact information. Additionally, Black Bayou has

identified Federal, state, and local agencies; public officials; community and public interest groups; non-governmental organizations; and Tribes. Project stakeholders are identified in Appendix 1F, Stakeholder List, to Resource Report 1, and outreach and consultations undertaken to date are discussed throughout the Resource Reports.

X. ENVIRONMENTAL IMPACT OF PROPOSED FACILITIES

The Environmental Report attached hereto as Exhibit F-I was prepared by ERM, a recognized, highly qualified environmental consulting organization with substantial experience with major projects in the Gulf Coast area. The Report includes all of the Resource Reports required for underground storage projects under Part 380 of the Commission's regulations.

As discussed above in Section I, the Project's Gas Storage Area will be located at a site that has long been used for oil and gas exploration activities and thus is previously disturbed. Several active oil and gas production wells and small processing facilities, together with access roads and other disturbances, still exist today at the site. However, drilling for new production is prohibited over or within the boundaries of the Black Bayou salt dome and will not impact or interfere with the Project.

Existing area infrastructure in the Gas Storage Area relevant to the Project includes approximately eight (8) miles of gravel roads, gravel well pads, parking lots, storage sheds, concrete pads from previously decommissioned equipment, oil and natural gas facilities, a communication tower, a boat launch and accompanying boat slips, barge offloading facilities, canals, and bridges. Black Bayou will utilize existing infrastructure to the extent practicable, including improving existing facilities to minimize environmental impact. Likewise, the Header Pipelines will be primarily co-located (approximately 89%) with existing utilities to maximize the use of already impacted areas and common rights-of-way and minimize environmental impacts.

With that background, the Resource Reports demonstrate that approval of the Black Bayou Project will not be a major Federal action significantly affecting the quality of the human environment. The Project as proposed will meet the project purpose and need of providing new safe, reliable, high-turn natural gas storage capacity to the Gulf Coast natural gas market, while at the same time only resulting in limited environmental impacts that will be eliminated, mitigated, and minimized by the measures identified by Black Bayou in the Resource Reports, which include the construction and operation requirements imposed by the Commission and other agencies. The following is a summary of each Resource Report:

Resource Report 1 describes the Project in detail, including purpose and need, location of the proposed facilities, land requirements, project schedule and workforce, construction procedures and specifications, environmental inspection and compliance requirements, required permits and approvals, landowner notification and stakeholder communications, and analysis of cumulative impacts. It concludes that significant cumulative impacts from the Project when considered together with other projects are not anticipated and that any potential cumulative impacts will be minimized by use of best management practices and adherence to or exceedance of regulatory requirements. It also discusses the socioeconomic contribution of the Project, which is anticipated to have a peak construction workforce of 1,040 and create 13 permanent jobs.

Resource Report 2 describes groundwater, surface water, and wetland resources and explains why the construction and operation of the Project will not adversely impact water quality. Wetland surveys were conducted of the Project area and the proposed facilities will avoid wetlands to the extent practicable. It also identifies the methods that Black Bayou will employ to minimize wetland and waterbody impacts through the use of the FERC Plan and Procedures. It states that

Black Bayou will implement any wetlands mitigation measures required by the U.S. Army Corps of Engineers and the Louisiana Department of Natural Resources.

Resource Report 3 describes fish, wildlife, and vegetation resources. While the Header Pipelines require 21 major waterbody crossings, one of which contains essential fish habit, HDD will be used where feasible to avoid impacts. Resource Report 3 concludes that significant impacts on vegetation, fish, and wildlife are not anticipated, in part because of the abundance of available habitat within the geographic scope and use of minimization measures during construction. It also states that federal and state agency consultations are ongoing regarding listed species.

Resource Report 4 describes the background research and surveys undertaken with respect to cultural resources, as well as how the Project will avoid impacts to known cultural resources. It also identifies the consultations undertaken to date with respect to the Louisiana State Historic Preservation Office and the Alabama Coushatta Tribe of Texas, Alabama-Quassarte Tribal Town, Apache Tribe of Oklahoma, Coushatta Tribe of Louisiana, Jena Band of the Choctaw Indians, Mississippi Band of Choctaw Indians, and Seminole Nation of Florida.

Resource Report 5 discusses socioeconomic impacts, including the peak temporary labor force of about 1,040 workers that will be hired to construct the Project. It states that Black Bayou anticipates hiring a permanent staff of about 13 to handle operation of the Project. An anticipated 50 percent of the total permanent staff will be existing local residents. It also discusses the Project's total estimated construction cost of around $400 million, which includes construction workforce salaries amounting to approximately $120 million plus material and equipment costs, as well as estimated local tax revenues.

Resource Report 5 also addresses environmental justice. Pursuant to Executive Order 12898, *Federal Actions to Address Environmental Justice in Minority and Low-Income*

Populations (1994), the Project will avoid the disproportionate placement of any adverse environmental, economic, social, or health impacts on minority and low-income communities. Overall, there are four designated low-income environmental justice communities within the environmental justice study area; however, it is not expected that any visual, noise, air quality, or traffic issues will affect these communities. As such, environmental justice impacts are not anticipated to result from the Project. The main concerns with respect to potential environmental justice impacts relate to traffic disruptions and construction-related air quality issues. However, traffic and construction issues are expected to be temporary and short in duration, and impacts to air quality are expected to result in minor and short-term impacts. As such, no disproportionately high or adverse impacts are expected with respect to any environmental justice community.

Resource Report 6 contains a detailed description of the Black Bayou salt dome and Project geology. It concludes that the Project will not adversely affect mineral resources or unique geologic features and discusses how Black Bayou will implement best management practices and subsidence monitoring plan to reduce operational impact on geologic features. Additionally, Black Bayou has designed the Project to meet or exceed stringent federal and state guidelines and regulations for safe and prudent cavern operations.

Resource Report 7 discusses soil resources. It concludes that impacts on soils are expected to be minimal due to the nature of the Project activities, which will be limited to a relatively small area. Black Bayou's Erosion Control Plan and Revegetation and Restoration Plan include methods and practices to minimize soil impacts.

Resource Report 8 discusses land use, recreation, and aesthetics. It states that the Gas Storage Area is situated in a remote location with limited road and waterway access, and that the Header Pipelines primarily cross undeveloped and rural portions of Cameron and Calcasieu

Parishes, Louisiana. It also notes that there are no residences within 50 feet of the Project workspaces. Resource Report 8 observes that there are no federally managed public or conservation lands, including national historic landmarks, national forests, national parks, national recreational trails, national wild and scenic rivers, or tribal lands, crossed by or located within 0.25 mile of the Project, and no state-managed lands, including historic sites, natural and scenic rivers, state parks, preservation areas, or other state-recognized public areas, located within 0.25 mile of the Project.

Resource Report 9 addresses potential air quality and noise impacts. It states that noise associated with construction of the Project is not expected to exceed the Commission's sound level requirements. Additionally, due to the temporary, transient nature and geographic spread of construction activities, it explains that emissions generated are not expected to cause or contribute to any significant air quality impacts. With respect to greenhouse gas emissions, it concludes that those emissions are generally minimal. It also discusses the air permitting requirements applicable to the Compressor Station.

Resource Report 10 analyzes alternatives based on project purpose and need. It identifies the no-action alternative, system alternatives, major route alterations and minor route variations with respect to the proposed Header Pipelines, and above-ground facility and cavern alternatives. It concludes that the no-action alternative would not meet the purpose and need of the Project, particularly given that the benefits of additional new natural gas storage capacity will outweigh the anticipated environmental impacts of the Project, as eliminated, mitigated, and minimized by the measures proposed by Black Bayou. It also explains how system alternatives are not adequate, as well as how the Preferred Route for the Header Pipeline and the proposed locations for the

above-ground facilities and caverns have been identified through the application of criteria designed to avoid and minimize environmental impacts compared to alternatives.

Resource Report 11 identifies the measures that Black Bayou will undertake to ensure the reliability and safety of the Project, including the design and construction standards it will apply, how operation and maintenance of the Project will be carried out, and the requirements for the Project's emergency response plan.

Resource Report 12 states that the analysis required for this report is not applicable because the Project does not include the replacement, abandonment by removal, or abandonment in place of pipeline facilities determined to have polychlorinated biphenyls ("PCBs") in excess of 50 parts per million in pipeline liquids or include modifications to compressor station sites that have been determined to have soils contaminated with PCBs.

XI. PROPOSED SERVICES AND TARIFF

Black Bayou proposes to provide open access firm, no-notice, end-use facility no-notice, enhanced, and interruptible storage services; firm, enhanced, and interruptible wheeling services; and enhanced and interruptible hub services, including parking, loaning, wheeling and balancing services, all in a manner which is consistent with the Commission's regulations and its prior decisions regarding numerous jurisdictional storage projects.

Black Bayou's *pro forma* tariff is attached hereto as Exhibit P. It is modeled on tariffs previously approved by the Commission for similar market-based rate storage projects. The *pro forma* rate schedules, service agreements and general terms and conditions included in the tariff set forth the specific terms and conditions for each of Black Bayou's proposed services, *i.e.*, Rate Schedules FSS, NNSS, NNSS-EU, ESS, and ISS for firm, no-notice, end-use facility no-notice, enhanced, and interruptible storage, respectively; Rate Schedules FPS, EPS, and IPS for firm,

enhanced, and interruptible parking, respectively; Rate Schedules FLS, ELS, and ILS for firm, enhanced, and interruptible loaning, respectively; Rate Schedules FWS, EWS and IWS for firm, enhanced, and interruptible wheeling, respectively; and Rate Schedule IBS for interruptible hourly balancing.

XII. REQUESTS FOR WAIVERS

Black Bayou has submitted herewith the information and exhibits required under Part 157 of the Commission's regulations, except for certain information which is not applicable to the Project. Consistent with these regulations, Black Bayou hereby requests the following waivers:

- Since this Application requests authority to charge market-based rates, Black Bayou requests waiver of Sections 157.6(b)(8) and 157.20(c)(3) of the Commission's regulations, which, respectively, require applicants for new projects to submit detailed cost of service data with their applications, and to update that data after its new facilities are placed into service.
- For the same reason, Black Bayou requests waiver of the requirements under Sections 157.14(a)(l4), (15), (17) and (18) of the regulations that it submit Exhibit K (Cost of Facilities), Exhibit L (Financing), Exhibit N (Revenues, Expenses, and Income) and Exhibit O (Depreciation and Depletion), and waiver of the accounting and reporting requirements set forth in Part 201 and Sections 260.1, 260.2, and 260.300 of the Commission's regulations. All of this information and all of these requirements are appropriate for projects with cost-of-service based rates, but not for those with market-based rates.

- Black Bayou requests waiver of the requirement under Section 157.14(a)(l1) of the regulations to submit gas supply data in Exhibit H because, as an open access storage project, it will not have gas supply. Its customers will supply their own gas.
- Black Bayou requests waiver of Sections 284.7(e) and 284.10 of the regulations which concern reservation charges and straight fixed-variable rate design and which are not applicable to market-based rates.
- Black Bayou requests an exemption from the requirement in Order No. 637 that natural gas companies allow shippers to segment their firm capacity paths to the extent operationally feasible.[27] Black Bayou requests this waiver, and has not included provisions in its *pro forma* tariff regarding capacity segmentation, on the basis that the Commission has found that the segmentation requirement does not apply to natural gas companies engaged solely in the business of natural gas storage that do not provide stand-alone transportation services.[28]
- Black Bayou requests a waiver of the Commission's "shipper must hold title" policy with respect to off-system capacity. The Commission has found that prior approval is no longer required to acquire capacity on another pipeline, provided the acquirer of the off-system capacity has filed tariff language specifying that it will only transport for others on off-system capacity pursuant to its tariff provisions and rates.[29] Black Bayou submits that its proposed tariff language in Section 6.27 of the General Terms and Conditions in its *pro forma* tariff is consistent with this requirement for a waiver.

[27] 18 C.F.R. § 284.7(d).
[28] *See, e.g., Pine Prairie Energy Ctr., LLC,* 109 FERC ¶ 61,215, at P 44 (2004); *SG Res. Mississippi, L.L.C.*, 101 FERC ¶ 61,029, at P 28 (2002); *Egan Hub Partners,* L.P., 98 FERC ¶ 61,284, at P 18 (2002).
[29] *See, e.g., Tex. E. Transmission Corp.*, 93 FERC ¶ 61,273 (2000), *reh'g denied*, 94 FERC ¶ 61,139 (2001); *Wash. 10 Storage Corp., S. Romeo Gas Storage Co.*, 175 FERC ¶ 61,051, at P 52.

- As discussed in Section V, Black Bayou requests certain modifications to the Commission's Plan and Procedures to accommodate Project-specific conditions. These modifications are discussed more fully in Section 1.7.5, Modifications to the Federal Energy Regulatory Commission Plan and Procedures, of Resource Report 1.
- Black Bayou requests any additional waivers deemed necessary or appropriate by the Commission.

XIII. REQUEST FOR PRIVILEGED AND CEII TREATMENT

Pursuant to Section 388.112 of the Commission's regulations, Black Bayou requests privileged treatment of Volume II – Privileged of this Application because it contains non-public, commercially sensitive commercial information, information concerning individual landowners that implicate privacy, detailed information concerning cultural resources, and detailed information regarding water supplies that are all exempt from public disclosure. Accordingly, good cause exists for the Commission to grant Black Bayou's request for privileged treatment of the above-referenced information. Petitioners have marked Volume II – Privileged in accordance with the Commission's regulations and instructions. In accordance with Section 388.1112(b)(2)(ii) of the Commission's regulations, Black Bayou has also included a protective agreement as an attachment to this Application.

Pursuant to Section 388.113 of the Commission's regulations, Black Bayou requests critical energy infrastructure information ("CEII") treatment of Volume III – CEII of this Application because it contains specific engineering, vulnerability and detailed design information about the Project and identifies more than the general location of natural gas facilities. Accordingly, good cause exists for the Commission to grant Black Bayou's request for CEII treatment of the above-referenced information. Petitioners have marked Volume III – CEII in

accordance with the Commission's regulations and instructions. Pursuant to Section 157.10(d) of the Commission's regulations, procedures for obtaining access to CEII may be found at 18 CFR § 388.113. Requests for access to CEII should be made to the Commission's CEII Coordinator.

XIV. REQUEST FOR SHORTENED PROCEDURE AND FEDERAL REGISTER NOTICE

Pursuant to Section 157.6(c) of the Commission's regulations, Black Bayou requests the shortened procedure specified in Section 385.802 of the Commission's regulations. A form of notice suitable for publication in the Federal Register summarizing the facts contained in this application is attached as required by Section 157.6(b)(7) of the Commission's regulations.

XV. REQUIRED EXHIBITS

Black Bayou is submitting this abbreviated Application pursuant to Sections 157.7 of the Commission's regulations. Accordingly, Black Bayou has omitted certain material as inapplicable or otherwise unnecessary to disclose fully the nature and extent of the Project proposed herein. A list of the exhibits and other attachments filed with this application, as well as those omitted, together with the reasons for omission, is set forth below. The exhibits are public, unless indicated otherwise.

Exhibit A	Copies of Black Bayou's articles of incorporation and by-laws or other similar documents.
Exhibit B	Copy of authorization for Black Bayou to do business in the State of Louisiana,
Exhibit C	A list of the names and business addresses of Black Bayou's officers and directors.
Exhibit D	A list of Black Bayou's subsidiaries and affiliations.
Exhibit E	Omitted. There are no other pending applications and filings under Sections 1, 3, 4, and 6 of the Natural Gas Act which are pending before the Commission at the time of the filing of this Application and which directly and significantly affect this Application.

Exhibit F	Omitted. Maps showing the location of the proposed storage facility are included as part of Exhibit F-I.
Exhibit F-I	An environmental report as specified in Sections 380.3 and 380.12 of the Commission's regulations, including the Resource Reports. The environmental report is public, except as follows: Appendices 1B (partial), 1E, 2B, and 4A are contained in Volume 2 – Privileged and Appendix 1B (partial) is contained in Volume 2 – CEII.
Exhibit G	Flow diagrams showing Project's daily design capacity. Since there are no existing facilities in operation, that information is omitted. This exhibit is contained in Volume 3 – CEII.
Exhibit G-I	Flow diagrams reflecting the Project's maximum capabilities. This exhibit is contained in Volume 3 – CEII.
Exhibit G-II	Flow diagram data for the Project. This exhibit is contained in Volume 3 – CEII.
Exhibit H	Omitted. Waiver requested in Section XII.
Exhibit I	Market data consisting of the market power prepared by Mr. Alexander Kirk and BWMQ.
Exhibit I-I	Black Bayou's open season notice.
Exhibit J	Omitted. A list of federal and state authorizations required for the Project is addressed in Section 1.11 of Resource Report 1.
Exhibit K	Omitted. Waiver requested in Section XII.
Exhibit L	Omitted. Waiver requested in Section XII.
Exhibit M	Omitted. Required information provided in Section V.
Exhibit N	Omitted. Waiver requested in Section XII.
Exhibit O	Omitted. Waiver requested in Section XII.
Exhibit P	A *pro forma* tariff is included with this filing. A statement concerning the derivation of rates has been omitted, because Black Bayou is requesting market-based rate authorization.
Exhibit Z-1	Protective agreement.
Exhibit Z-2	Form of notice attached for publication in the Federal Register.

XVI. AUTHORIZATIONS REQUESTED AND CONCLUSION

Wherefore, for the reasons set forth herein, Black Bayou respectfully requests that the Commission:

1. Grant a certificate of public convenience and necessity under Section 7(c) of the NGA, authorizing Black Bayou to construct, own and operate a new natural gas storage facility, as specifically described in this Application and the Resource Reports,

2. Grant a blanket certificate of public convenience and necessity under Subpart G of Part 284 of the Commission's regulations which would allow Black Bayou to store natural gas on behalf of others, with pregranted abandonment, on an open access and self-implementing basis, consistent with the Commission's regulations and Black Bayou's tariff,

3. Grant a blanket certificate of public convenience and necessity under Subpart F of Part 157 of the Commission's regulations which would allow Black Bayou to engage in certain self-implementing routine activities,

4. Grant Black Bayou's request for market-based rates,

5. Grant approval of Black Bayou's *pro forma* tariff, and

6. Grant the waivers requested herein and any other waivers deemed necessary and appropriate by the Commission.

This application and the supporting material being submitted herewith demonstrate that Black Bayou is ready, willing and able to perform the acts and the services proposed and to conform to the provisions of the NGA and the requirements, rules and regulations promulgated by the Commission thereunder, and that the proposed services, operation and construction of the Project are required by the present and future public convenience and necessity.

Respectfully submitted,

/s/Emil J. Barth

ONLINE FILING
wkellner@kellnerlawfirm.com

BLACK BAYOU GAS STORAGE, LLC

It has been a pleasure to approve and place on file your articles of organization. The appropriate evidence is attached for your files.

Payment of the filing fee is acknowledged by this letter.

In addition to email and text notifications, business owners now have the option to enroll in our secured business filings (SBF) service. This service is available online, at no charge, by filing a notarized affidavit. Upon enrollment, an amendment cannot be made to your entity without approval using your personal identification number. This is another way to protect your business from fraud and identity theft.

Please note that as of January 1, 2018, business owners in the following parishes will be required to file all available business documents online through geauxBIZ: Ascension, Bossier, Caddo, Calcasieu, East Baton Rouge, Jefferson, Lafayette, Livingston, Orleans, Ouachita, Rapides, St. Tammany, Tangipahoa and Terrebonne.

Online filing options are available if changes are necessary to your registration or if you need to file an annual report. Please visit our website at **GeauxBiz.com** for your future business needs.

Sincerely,

The Commercial Division

OPERATING AGREEMENT OF BLACK BAYOU GAS STORAGE, LLC

This Operating Agreement (the "***Agreement***") of Black Bayou Gas Storage, LLC (the "***Company***"), effective as of July 17, 2024 (the "***Effective Date***"), is entered into by and between the Company and Black Bayou Energy Hub, LLC, as the sole member of the Company (the "***Member***").

WHEREAS, the Company was formed as a limited liability company on December 4, 2023 by the filing its Articles of Organization with the Secretary of State of the State of Louisiana pursuant to and in accordance with La. R.S. 12:1301, *et seq*., as amended from time to time (the "**Act**"); and

WHEREAS, the Member agrees that the membership in and management of the Company shall be governed by the terms set forth herein.

NOW, THEREFORE, the Member agrees as follows:

1. ***Name***. The name of the Company is Black Bayou Gas Storage, LLC.

2. ***Purpose***. The purpose of the Company is to engage in any lawful act or activity for which limited liability companies may be formed under the Act and to engage in any and all activities necessary or incidental thereto.

3. ***Principal Office; Registered Agent***.

(a) *Principal Office*. The location of the principal office of the Company shall be 229 Heymann Blvd., Lafayette, LA 70503, or such other location as the Member may from time to time designate.

(b) *Registered Agent*. The registered agent of the Company for service of process in and the registered office of the Company shall be that person and location reflected in the Articles of Organization.

4. ***Members***.

(a) *Initial Member*. The Member owns 100% of the membership interests in the Company. The name and the business, residence, or mailing address of the Member are as follows:

Name	**Address**
Black Bayou Energy Hub, LLC	229 Heymann Blvd. Lafayette, LA 70503

(b) *Membership Interests; No Certificates*. The Company will not issue any certificates to evidence ownership of the membership interests.

5. ***Management***.

(a) *Authority; Powers and Duties of the Member*. The Member shall have exclusive and complete authority and discretion to manage the operations and affairs of the Company and to make all decisions regarding the business of the Company in accordance with the terms of the Member's operating agreement. Any action taken by the Member shall constitute the act of and serve to bind the Company. Persons dealing with the Company are entitled to rely conclusively on the power and

authority of the Member as set forth in this Agreement. The Member shall have all rights and powers of a manager under the Act, and shall have such authority, rights, and powers in the management of the Company to do any and all other acts and things necessary, proper, convenient, or advisable to effectuate the purposes of this Agreement.

(b) *Election of Officers; Delegation of Authority*. Despite the foregoing, the Member may, from time to time, designate a manager (the "***Manager***") to act in the name of the Company with such authority as may be delegated to such Manager by the Member. Any such Manager shall act pursuant to such delegated authority until such Manager is removed by the Member. Any action taken by a Manager designated by the Member pursuant to authority delegated to such Manager shall constitute the act of and serve to bind the Company. Persons dealing with the Company are entitled to rely conclusively on the power and authority of any Manager set forth in this Agreement and any instrument designating such Manager and the authority delegated to such Manager.

6. ***Liability of Member; Indemnification***.

(a) *Liability of Member*. Except as otherwise required under the Act, the debts, obligations, and liabilities of the Company, whether arising in contract, tort, or otherwise, shall be solely the debts, obligations, and liabilities of the Company, and the Member shall not be obligated personally for any such debt, obligation, or liability of the Company solely by reason of being the Member or participating in the management of the Company.

(b) *Indemnification*. To the fullest extent permitted under the Act, the Member (irrespective of the capacity in which it acts) shall be entitled to indemnification and advancement of expenses from the Company for and against any loss, damage, claim, or expense (including attorneys' fees) whatsoever incurred by the Member relating to or arising out of any act or omission or alleged acts or omissions (whether or not constituting negligence or gross negligence) performed or omitted by the Member on behalf of the Company; provided, however, that any indemnity under this Section 6(b) shall be provided out of and to the extent of Company assets only, and neither the Member nor any other person shall have any personal liability on account thereof.

7. ***Term***. The term of the Company shall be perpetual unless the Company is dissolved and terminated in accordance with Section 11.

8. ***Initial Capital Contributions***. The Member will contribute to the Company such cash, property, or services that the Member, subject to the terms of its operating agreement, deems appropriate.

9. ***Tax Status; Income and Deductions***.

(a) *Tax Status*. As long as the Company has only one member, it is the intention of the Company and the Member that the Company be treated as a disregarded entity for federal and all relevant state tax purposes and neither the Company nor the Member shall take any action or make any election which is inconsistent with such tax treatment. All provisions of this Agreement are to be construed so as to preserve the Company's tax status as a disregarded entity.

(b) *Income and Deductions*. All items of income, gain, loss, deduction, and credit of the Company (including, without limitation, items not subject to federal or state income tax) shall be

Doc ID: 1ddf3669a6bd4198b3baf2f5a00ba7b6069d850b

treated for federal and all relevant state income tax purposes as items of income, gain, loss, deduction, and credit of the Member.

10. ***Distributions***. Distributions shall be made to the Member at the times and in the amounts as determined by the Member.

11. ***Dissolution; Liquidation***.

(a) The Company shall dissolve, and its affairs shall be wound up upon the first to occur of the following: (i) the written consent of the Member; or (ii) any other event or circumstance giving rise to the dissolution of the Company under the Act, unless the Company's existence is continued pursuant to the Act.

(b) Upon dissolution of the Company, the Company shall immediately commence to wind up its affairs and the Member shall promptly liquidate the business of the Company. During the period of the winding up of the affairs of the Company, the rights and obligations of the Member under this Agreement shall continue.

(c) In the event of dissolution, the Company shall conduct only such activities as are necessary to wind up its affairs (including the sale of the assets of the Company in an orderly manner), and the assets of the Company shall be applied as follows: (i) first, to creditors, to the extent otherwise permitted by law, in satisfaction of liabilities of the Company (whether by payment or the making of reasonable provision for payment thereof); (ii) second, to the establishment of and additions to reserves that are determined by the Member to be reasonably necessary for any contingent unforeseen liabilities or obligations of the Company; and (iii) thereafter, to the Member.

12. ***Miscellaneous***.

(a) *Amendments*. Amendments to this Agreement may be made only with the written consent of the Member.

(b) *Governing Law*. This Agreement shall be governed by and construed in accordance with the internal laws of the State of Louisiana without giving effect to any choice or conflict of law provision or rule (whether of the State of Louisiana or any other jurisdiction).

(c) *Severability*. In the event that any provision of this Agreement shall be declared to be invalid, illegal, or unenforceable, such provision shall survive to the extent it is not so declared, and the validity, legality, and enforceability of the other provisions hereof shall not in any way be affected or impaired thereby, unless such action would substantially impair the benefits to any party of the remaining provisions of this Agreement.

[*signature page follows*]

UNITED STATES OF AMERICA

State of Louisiana

R. Kyle Ardoin

SECRETARY OF STATE

As Secretary of State, of the State of Louisiana, I do hereby Certify that

a copy of the Articles of Organization and Initial Report of

BLACK BAYOU GAS STORAGE, LLC

Domiciled at LAFAYETTE, LOUISIANA,

Was filed and recorded in this Office on December 04, 2023,

And all fees having been paid as required by law, the limited liability company is authorized to transact business in this State, subject to the restrictions imposed by law, including the provisions of R.S. Title 12, Chapter 22.

In testimony whereof, I have hereunto set my hand and caused the Seal of my Office to be affixed at the City of Baton Rouge on,

December 4, 2023

Secretary of State

Market Power Analysis of Mr. Alexander Kirk and BWMQ

(follows this cover sheet)

Exhibit No. BBGS-0001

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Black Bayou Gas Storage, LLC) Docket No. CP24-___-000

Summary of Prepared Direct Testimony of
Alexander Kirk
on behalf of Black Bayou Gas Storage, LLC

Mr. Kirk is a Vice President of Brown, Williams, Moorhead & Quinn, Inc. ("BWMQ") and advises and assists energy industry clients on matters relating to natural gas supply and demand, rate design and cost of service modeling, studies to assess market-power, and economic life determinations for natural gas pipelines. The purpose of Mr. Kirk's testimony is to adopt and support the findings of the market power study prepared by BWMQ on behalf of Black Bayou Gas Storage, LLC ("Black Bayou") (the "Market Power Study"), provided as an exhibit to his testimony.

Mr. Kirk's testimony and the Market Power Study support Black Bayou's request to the Federal Energy Regulatory Commission ("Commission") for authorization to charge market-based rates for its proposed firm and interruptible storage services, storage derivative hub services, and wheeling services to be offered by Black Bayou, as Black Bayou will be unable to exercise market power for these services.

Complying with Commission orders pertaining to market-based rates for storage facilities, the Market Power Study defines the relevant product market for its storage service as interstate and intrastate underground natural gas storage facilities as well as local production and the relevant geographic market as the "Gulf Coast Production Area." Within the Gulf Coast Production Area,

described in the Market Power Study, Mr. Kirk finds that Black Bayou's 0.6 percent market share for working gas capacity and 2.7 percent market share for daily deliverability are small, indicating that Black Bayou cannot exercise market power *acting alone*. The corresponding Herfindahl-Hirschman Indexes ("HHI") of 251 and 523 for working gas capacity and daily deliverability, respectively, are also well below the Commission's 1800 HHI threshold, indicating that Black Bayou *acting together* with other storage providers and local gas producers cannot exercise market power. In addition, the other relevant factors presented further reduce any potential market power concerns. Based on these findings, Mr. Kirk concludes that Black Bayou lacks market power in the relevant market and should be granted permission to charge market-based rates for its firm and interruptible storage services and storage derivative hub services provided by Black Bayou.

Complying with Commission orders pertaining to market-based rates for wheeling services, the Market Power Study provides a hub analysis analyzing Black Bayou's market share and the market concentration based on receipt and delivery capacity for hubs located in the Gulf Coast Production Area. Within the Gulf Coast Production Area, Mr. Kirk finds that Black Bayou's 5.3 percent market share for receipt capacity and 4.9 percent market share for delivery capacity are small, indicating that Black Bayou cannot exercise market power *acting alone*. The corresponding HHI within the Gulf Coast Production Area of 1142 and 1102 for receipt and delivery capacity, respectively, are also well below the Commission's 1800 HHI threshold, indicating that Black Bayou *acting together* with other hubs cannot exercise market power. Mr. Kirk also provides a "bingo card" analysis that identifies the pipeline interconnections that are good alternatives to Black Bayou's proposed wheeling services. The bingo card is completely "filled-in," as there will be alternative direct and indirect interconnections to Black Bayou's proposed wheeling service. The other relevant factors presented further reduce any potential

market power concerns. Based on these findings, Mr. Kirk also concludes that Black Bayou lacks market power in the relevant market and should also be granted permission to charge market-based rates for the firm and interruptible wheeling services provided by Black Bayou.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Black Bayou Gas Storage, LLC	)	Docket No. CP24-___-000

PREPARED DIRECT TESTIMONY OF ALEXANDER KIRK

I. Introduction

Q. Please state your name, job title and business address.

A. My name is Alexander J. Kirk, and my business address is P.O. Box 10, Sunderland, MD 20689-0010. I am a Vice President of Brown, Williams, Moorhead & Quinn, Inc. ("BWMQ"), a nationally recognized energy consulting firm based in the Washington D.C. region.

Q. Please briefly state your professional experience and qualifications.

A. I earned a Bachelor of Science degree with majors in Mathematics and Economics from Linfield College in 2005, and a Master of Arts in Economics from the University of Washington in 2008. Between September 2008 to May 2010, I was an instructor for Principles of Microeconomics and Natural Resource Economics courses at the University of Washington. I have been employed by BWMQ since June 2007, where I have assisted clients with analyses of gas supply, natural gas pipeline rate cases, storage and pipeline market-based rate applications, business risk, rate design and both traditional and levelized cost-of-service modeling.

Q. On whose behalf are you submitting your prepared testimony in this proceeding?

A. I am submitting testimony on behalf of Black Bayou Gas Storage, LLC ("Black Bayou").

Q. Have you previously testified before the Federal Energy Regulatory Commission ("Commission" or "FERC")?

A. Yes, a list of the cases in which I have provided testimony is included in my curriculum vitae attached as Exhibit No. BBGS-0002.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to adopt and support the findings of the Market Power Study prepared by BWMQ on behalf of Black Bayou ("Market Power Study"), contained in Exhibit No. BBGS-0003. The Market Power Study demonstrates that Black Bayou lacks market power in the provision of firm and interruptible storage, storage-derivative hub services, and wheeling services in the relevant markets and therefore should be granted permission to charge market-based rates for these proposed services.

Q. How is the Market Power Study, Exhibit No. BBGS-0003, organized?

A. The Market Power Study is organized into six Sections:

Section I	Purpose
Section II	Findings
Section III	Facilities
Section IV	Market-Based Rates for Storage and Storage Derivative Hub Services
Section IV.A	Requirements for Market-Based Rates for Storage and Storage Derivative Services
Section IV.B	Relevant Product Market
Section IV.C	Relevant Geographic Market
Section IV.D	Market-Power Measures for Storage Services
Section IV.E	Other Relevant Factors
Section VI	Market-Based Rates for Wheeling Services
Section VI.A	Requirements for Market-Based Rates for Wheeling Services
Section VI.B	Relevant Product Market
Section VI.C	Relevant Geographic Market
Section VI.D	Evaluation of Market Share and Market Concentration
Section VI.E	Bingo Card Analysis
Section VI.F	Other Relevant Factors
Section VI	Conclusions

The Market Power Study also includes the following Attachments:

Attachment 1	Maps:
	Map 1A: Black Bayou Gas Storage, LLC
	Map 1B: Storage Fields in Operation in the Gulf Coast Production Area
	Map 1C: Storage Fields and Pipelines in Operation in the Gulf Coast Production Area
	Map 1D: Location of Local Producing Wells in the Gulf Coast Production Area
Attachment 2	Storage Fields in Operation and Local Production in the Gulf Coast Production Area: Market Share and HHI
Attachment 3	Certificated Natural Gas Storage Projects Since 2000 in the Gulf Coast Production Area
Attachment 4	Local Production is a Good Alternative to Storage
Attachment 5	Futures Prices in the Gulf Coast Production Area
Attachment 6	Cost-Based Storage Rates in the Gulf Coast Production Area
Attachment 7	Bingo Card Analysis of Alternatives to Black Bayou
Attachment 8	Pipeline Interconnection Capacity used in the Bingo Card
Attachment 9	Certificated Natural Gas Wheeling Projects since 2000 in the Gulf Coast Production Area
Attachment 10	Gulf Coast Production Area Market Centers and Hubs: Receipt and Delivery Capacity, Market Share and HHI

II. Purpose and Findings

Q. Was the Market Power Study as presented in Exhibit No. BBGS-0003 prepared under your supervision and control, including the purpose and findings presented at Section I and II?

A. Yes.

III. Facilities

Q. Please describe Black Bayou's facilities.

A. The Market Power Study describes the proposed Black Bayou facilities in Exhibit No. BBGS-0003 at Section III. Black Bayou's storage facilities will be located in the Black Bayou Salt Dome in Cameron Parish, Louisiana. The storage facility has a proposed working gas capacity of 34,720,000 thousand cubic feet ("Mcf") and a daily deliverability of 2,000,000 thousand cubic feet per day ("Mcf/d"). Black Bayou's header system will begin at the storage facility and extend north through Cameron and Calcasieu Parishes, ultimately terminating five miles northeast of Starks, Louisiana at an interconnect with Transcontinental Gas Pipe Line Company, LLC ("Transco"). The header system will consist of one high and one low pressure line, will be approximately 27 miles in length, and have a total capacity of 2,000,000 Mcf/d. Black Bayou intends to have bidirectional interconnects up to 500,000 Mcf/d with 10 interstate pipelines.

Black Bayou is requesting authorization by the Commission to charge market-based rates for firm and interruptible storage service, storage-derivative services, and wheeling services.

IV. Market-Based Rates for Storage Services

Q. Please describe the Commission's requirements for applicants seeking market-based rates for storage services.

A. The Market Power Study discusses the Commission's requirements in Exhibit No. BBGS-0003 at Section IV.A. Specifically, the study discusses the Commission's requirements included in its *Alternatives to Traditional Cost-of-Service Ratemaking for Natural Gas Pipelines and Regulation of Negotiated Transportation Services of Natural Gas Pipelines*, 74 FERC ¶ 61,076 (1996) ("Policy Statement"), *Rate Regulation of Certain Natural Gas*

Storage Facilities, FERC Stats. and Regs. ¶ 31,220 (2006); *Order on Clarification and Rehearing*, 117 FERC ¶ 61,190 (2006), as well as numerous findings of the Commission in previous orders approving market-based rates for past applicants in the U.S. Gulf Coast as well as in the September 2019 *Order on Remand*, 168 FERC ¶ 61,195 (2019) ("ANRS Order on Remand") in which the Commission approved market-based rates for ANR Storage Company. The Market Power Study discusses the three major steps of the Commission's analytical framework used to show a lack of market power: (1) define the relevant product and geographic markets; (2) measure a firm's market share and market concentration in the relevant markets; and (3) evaluate other relevant factors.

Q. What metric for market concentration does the Commission typically examine?

A. To measure market concentration, the Commission typically examines a Herfindahl-Hirschman Index ("HHI"), calculated by summing the squares of each storage provider's market share, which is then commonly multiplied by 10,000. The Commission uses an HHI threshold of 1800 as an indicator of possible market power concern warranting further analysis. The process of calculating the HHI and its interpretation is described fully in Exhibit No. BBGS-0003 at Section IV.A.

Q. Please describe the relevant product market.

A. The Market Power Study describes the relevant product market in Exhibit No. BBGS-0003 at Section IV.B. Black Bayou seeks authority to offer its proposed firm and interruptible storage services at market-based rates. The product market used for this analysis includes interstate and intrastate underground natural gas storage facilities as well as local production in the Gulf Coast Production Area.

Q. Does the Market Power Study demonstrate local production is a good alternative?

A. Yes. The analytical approach is explained in Exhibit No. BBGS-0003 at Attachment 4. The *quality* of local production is identical to that of storage because both services provide an identical unit of natural gas at the same point in time. Local production in the Market Power Study has been limited to east Texas, Louisiana, and Mississippi. To be conservative, production from neighboring states and areas, such as West Texas and the Midcontinent that would be accessible through pipelines traversing these states as well as the geographic market were excluded from the analysis. Similarly, imported production from more distant basins, such as the Marcellus Shale, were also excluded. To show that local production is *price comparable* to natural gas storage, a peak-price premium has been estimated using the futures price differential between the summer (injection) and winter (withdrawal) seasons for 2024/2025, 2025/2026, and 2026/2027 and compared to the threshold price of storage. These calculations are shown in Exhibit No. BBGS-0003 at Attachment 5 and 6.

Q. How is the quantity of local production estimated?

A. The method used to tabulate local production is described in Exhibit No. BBGS-0003 at Attachment 4 and the quantity, by producer, is shown in Exhibit No. BBGS-0003 at Attachment 2. Local production data was obtained from the Texas Railroad Commission, the Louisiana Department of Natural Resources, and the Mississippi State Oil & Gas Board. The estimated production for a five-month winter period is utilized as a proxy for each company's working gas capacity, and each company's estimated daily production is utilized for daily deliverability. The location of natural gas production in the Gulf Coast Production Area is shown on the map in Exhibit No. BBGS-0003 at Attachment 1, Map 1D.

Q. How have you determined that local production will continue to be available?

A. I reviewed production projections from the EIA in its *Annual Energy Outlook*. Although there is much uncertainty in energy markets over long (multi-decade) time horizons, the EIA's 2023 projections of Gulf Coast natural gas production show continued natural gas production is expected under each of its scenarios.

Q. Is the product market properly defined?

A. Yes.

Q. Please identify and describe the relevant geographic market.

A. The relevant geographic market, referred to as the Gulf Coast Production Area, is described in Exhibit No. BBGS-0003 at Section IV.C. The Gulf Coast Production Area is defined to include east Texas, Louisiana, Mississippi, and Alabama. This geographic market definition is supported by the vast number of interconnected pipelines and the clustering of storage facilities located across the Gulf Coast Production Area. See, for example, the maps shown in Exhibit No. BBGS-0003 at Attachment 1, Map 1B and Map 1C. Furthermore, this geographic market definition has been accepted by the Commission in numerous previous Commission orders approving market-based rates for storage providers, as outlined in Exhibit No. BBGS-0003 at Section IV.C.

Q. Is your geographic market definition conservative?

A. Yes. The Market Power Study excludes storage facilities and local production in other nearby states such as Arkansas, Oklahoma, and the western portion of Texas, that are extremely well interconnected with the Gulf Coast Production Area and could easily been justified as appropriate for inclusion in the relevant geographic market.

Q. Is the geographic market properly defined?

A. Yes.

Q. Does the Market Power Study describe the market share and market concentration metrics for Black Bayou?

A. Yes. The market share and market concentration metrics are described and calculated in the Market Power Study in Exhibit No. BBGS-0003 at Section IV.D and Attachment 2.

Q. For purposes of computing the market shares and HHIs of the storage facilities and local production in the relevant geographic market, are storage facilities and local producers aggregated by corporate owner?

A. Yes. The storage facilities and local producers in Exhibit No. BBGS-0003 at Attachment 2 are aggregated by corporate owner.

Q. Please briefly describe the corporate ownership and affiliates of Black Bayou.

A. The Market Power Study discusses Black Bayou's affiliations in Exhibit No. BBGS-0003 at Section IV.D. Black Bayou is not affiliated with any other natural gas storage in the Gulf Coast Production Area.

Q. What values did the Market Power Study calculate for Black Bayou's market shares and the corresponding HHIs in the Gulf Coast Production Area?

A. The market share for Black Bayou is 0.6 percent for working gas capacity and 2.7 percent for daily deliverability. The corresponding HHI within the Gulf Coast Production Area is 251 for working gas capacity and 523 for daily deliverability. These calculations are shown in Exhibit No. BBGS-0003 at Attachment 2.

Q. What do you conclude from the data?

A. The data demonstrates that, as the Commission has repeatedly found, the Gulf Coast Production area is a competitive market with numerous participants. Black Bayou's working gas and daily deliverability market shares, as well as the HHIs in the relevant

geographic market, are well below any level at which the Commission has expressed a market power concern.

Q. Did the Market Power Study evaluate other relevant factors that provides further evidence that the Gulf Coast Production Area is highly competitive?

A. Yes, the Market Power Study describes other relevant factors in Exhibit No. BBGS-0003 at Section IV.E.

Q. What are these other relevant factors?

A. The Market Power Study describes the following other relevant factors:

Section IV.E.i: Entry into the market is easy: there are no substantial barriers to entry

Section IV.E.ii: The growth of Gulf Coast natural gas production may provide additional competition

Section IV.E.ii: Black Bayou is a new entrant in the provision of its proposed firm and interruptible storage service into an already competitive market

Q. What do you conclude about entry in the Gulf Coast Production Area?

A. Entry into the Gulf Coast Production Area is easy, as evidenced by numerous storage projects that have been proposed since 2000, as well as the existence of 67 total storage facilities owned by many separate corporate storage entities, including Black Bayou, and hundreds of small independent natural gas producers. The size distribution also suggests that small firms can be competitive, and that small size does not preclude entry. The Commission has, as recently as October 2022, found that there are no significant barriers to entry in the Gulf Coast Production Area. *See* Exhibit No. BBGS-0003 at Section IV.E.i.

Q. What do you conclude about the potential growth of Gulf Coast natural gas production?

A. The EIA prepares projections each year in its *Annual Energy Outlook*. Although there is much uncertainty in energy markets over long (multi-decade) time horizons, the EIA's 2023 projections of Gulf Coast natural gas production show increased natural gas production under each of its scenarios. Such evidence suggests that the amount of local production included in the Market Power Study may understate the amount of competition that Black Bayou is likely to face within the next decade, further supporting the findings of the study. *See* Exhibit No. BBGS-0003 at Section IV.E.ii.

Q. What is your last other relevant factor?

A. Black Bayou's proposed firm and interruptible storage services will introduce entirely new capacity into the Gulf Coast Production Area. Black Bayou will have no current firm and interruptible storage customers for its proposed service. To attract new customers, Black Bayou's services must be offered on terms that are comparable to the services of alternative providers that are currently being used. Black Bayou will compete with 66 other storage facilities and hundreds of local producers identified in Exhibit No. BBGS-0003 at Attachment 2, none of which are affiliated with Black Bayou. Furthermore, the Commission has deemed the same product and geographic market as competitive as recently as October 2022. *See* Exhibit No. BBGS-0003 at Section IV.E.iii and Attachment 3.

V. Market-Based Rates for Wheeling Services

Q. Is the Commission's approach to evaluating market power in the provision of wheeling service similar to that of storage service?

A. Yes. As explained in Exhibit No. BBGS-0003 at Section V.A, while the specific markets and alternatives analyzed for storage and wheeling are different, the Commission's

framework for evaluating market power for wheeling is nevertheless similar to that of storage. As explained in Section V.A, there are two analyses typically considered by the Commission to evaluate the market power for wheeling service. One analysis involves measuring the applicant's market shares and the market concentration of receipt and delivery capacity at the hubs located in the relevant geographic market. Similar to the evaluation of market share and market concentration in the storage market, an applicant's market share of receipt and delivery capacity is an indicator of whether an applicant can exercise market power "acting alone". The market concentration metrics, as measured by the HHIs for receipt and delivery capacity, indicate whether an applicant can "act together" with competing providers to exercise market power. The Commission also considers the so-called "bingo card" analysis, which identifies all possible wheeling combinations offered by the applicant's facilities and identifies alternative direct and indirect pipeline paths for each of the applicant's wheels. If the bingo card is able to identify alternative paths for each of its proposed wheeling services, it is completely "filled-in." The Commission has concluded that a filled-in bingo card demonstrates that there are numerous good alternatives to the proposed wheeling service and that shippers can avoid an applicant's wheeling service using alternative routes.

Q. What product and geographic markets are used by the Market Power Study for the hub analysis?

A. The Market Power Study describes the product and geographic markets for the hub analysis in Exhibit No. BBGS-0003 at Section V.B and V.C. The applicant's proposed wheeling services will involve both the firm and interruptible transfer of gas between 10 interconnected pipelines. The hub analysis identifies other hubs across the geographic

market that offer similar services. The Gulf Coast Production Area is also used to analyze Black Bayou's wheeling service. This geographic market is supported by the vast number of interconnected pipelines and the clustering of storage and hub facilities located across the Gulf Coast Production Area. See Exhibit No. BBGS-0003 at Attachment 1, Map 1B and Map 1C. The Commission accepted the same geographic market definition in evaluating many recent market-based rate wheeling proposals in the Gulf Coast Production Area, as outlined in Exhibit No. BBGS-0003 at Section V.C.

Q. Regarding Black Bayou's wheeling service, are the product and geographic markets properly defined?

A. Yes.

Q. What values did the Market Power Study calculate for Black Bayou's market shares and the corresponding HHIs in the Gulf Coast Production Area for hub receipt and delivery capacity?

A. The Market Power Study evaluates Black Bayou's receipt and delivery capacity market shares and the corresponding HHIs among hubs in the Gulf Coast Production Area in Exhibit No. BBGS-0003 at Section V.D. To be conservative, although the Venture Global CP Express LLC and the Port Arthur Pipeline, LLC Louisiana Connector Project are not currently operational, the expected interconnect capacity is included in Black Bayou's market share. The market share for Black Bayou is 5.3 percent for receipt capacity and 4.9 percent for delivery capacity. The HHI for receipt capacity is 1142 and the HHI for delivery capacity is 1102. These calculations are shown in Exhibit No. BBGS-0003 at Attachment 10.

Q. What do you conclude from the data?

A. The data demonstrates that, as the Commission has repeatedly found, hub facilities in the Gulf Coast Production Area are in a competitive market with numerous participants. Black Bayou's receipt and delivery capacity market shares, as well as the HHIs in the relevant geographic market, are well below any level at which the Commission has expressed a market power concern.

Q. Did the Market Power Study provide a bingo card analysis, as you described earlier?

A. Yes, a bingo card analysis is provided and explained in the Market Power Study in Exhibit No. BBGS-0003 at Section V.E. The bingo card is shown in Exhibit No. BBGS-0003 at Attachment 7, with the alternative direct and indirect interconnection capacity tabulated in Exhibit No. BBGS-0003 at Attachment 8. The bingo card identified a total of 101,550,124 Mcf/d of alternative direct and indirect capacity, significantly more than the 2,000,000 Mcf/d proposed wheeling capability of Black Bayou. As the bingo card identified alternative direct and indirect capacity for each of Black Bayou's proposed wheels, the bingo card is completely "filled-in."

Q. What do you conclude from the bingo card analysis?

A. The bingo card demonstrated there are numerous good alternatives to the proposed wheeling service and that shippers can avoid Black Bayou's wheeling service using alternative routes.

Q. Did the Market Power Study evaluate other relevant factors in regard to wheeling service that provides further evidence that the Gulf Coast Production Area is highly competitive?

A. Yes, the Market Power Study describes other relevant factors in regard to wheeling service in Exhibit No. BBGS-0003 at Section V.F.

Q. What are these other relevant factors?

A. The Market Power Study describes the following other relevant factors:

Section V.F.i: Entry into the market is easy: there are no substantial barriers to entry

Section V.F.ii: Black Bayou is a new entrant in the provision of its proposed firm and interruptible wheeling services into an already competitive market

Section V.F.iii: Additional competition from market center operations

Q. What do you conclude about entry into the Gulf Coast Production Area?

A. Entry into the Gulf Coast Production Area is easy. Exhibit No. BBGS-0003 at Attachment 10 identifies 22 hubs owned by at least 12 separate corporate entities (Agua Dulce Hub is not controlled by a single entity, rather it is an amalgamation of pipeline and header systems). The large number of market participants, each with a relatively small market share, is indicative of a market where entry is easy. Many of these hub competitors offer wheeling at market-based rates and have been constructed since 2000. See Exhibit No. BBGS-0003 at Attachment 9 and Attachment 10.

The Commission has also stated that entry is easy in the provision of wheeling services in numerous recent orders approving market-based rates in the U.S. Gulf Coast. The Commission has also previously found that there are no significant barriers to entry in the Gulf Coast Production Area in the provision of wheeling service. *See* Exhibit No. BBGS-0003 at Section V.F.i.

Q. What do you conclude about Black Bayou providing an entirely new wheeling service?

A. Black Bayou's proposed firm and interruptible wheeling service will introduce entirely new capacity into the geographic market, and it will have no current customers for its proposed service. Consequently, it must compete for customers who are currently being served by alternative providers, in a market previously determined to lack concentration, and must do so at an attractive price. The Commission examined a hub analysis in the Gulf Coast Production area as recently as September 2022 and determined that the Gulf Coast Production Area is a "highly competitive area". *LA Storage, LLC*, 180 FERC ¶ 61,188 at P 46 (2022). Black Bayou will compete with 21 other hubs identified in Exhibit No. BBGS-0003 at Attachment 10, none of which are affiliated with Black Bayou. Thus, the alternatives provided in Attachment 10 are good alternatives, and Black Bayou's new capacity will only increase competition in the Gulf Coast Production Area. *See* Exhibit No. BBGS-0003 at Section V.F.ii.

Q. What do you conclude about the additional competition from market center operations?

A. Transactions at market centers and other trading hubs also compete with the transportation services offered by Black Bayou. Traditionally, if a market participant wanted to transfer natural gas from Pipeline A to Pipeline B, for example, the participant would be required to find physical interconnects that link the two pipelines. Following the development of sophisticated market centers and trading hubs, however, shippers are now able to engage in deals that allow them to effectively "transfer" gas from Pipeline A to Pipeline B without the need for physical interconnects. Market centers offer title transfer, hub-to-hub transfer services, and electronic trading which allow shippers to transfer ownership rights not only

directly, by trading gas on Pipeline A for gas on Pipeline B, but also indirectly, by selling gas on Pipeline A while simultaneously purchasing gas on Pipeline B.

Market center operations offer far more services and trading possibilities than are represented by their physical facilities listed in Exhibit No. BBGS-001 at Attachment 10. Numerous trading hubs exist throughout the Gulf Coast Production Area offer locations for trading facilitated by exchanges such as the Intercontinental Exchange and the New York Mercantile Exchange (owned by CME Group). Such trading hubs are often located on pipelines that frequently include a significant amount of interconnection capacity with other nearby pipelines. Given the large number of market centers and trading hubs the competition for wheeling service is far greater than suggested by the physical facilities of competitors listed in Exhibit No. BBGS-001 at Attachment 10.

IX. Conclusions

Q. Do you agree with and sponsor the conclusions of the Market Power Study?

A. Yes, I support the conclusions presented in Exhibit No. BBGS-0003 at Section VI.

With respect to firm and interruptible storage service, Black Bayou's 0.6 percent market share for working gas capacity and 2.7 percent market share for daily deliverability in the Gulf Coast Production Area are small, indicating that Black Bayou cannot exercise market power *acting alone*. The corresponding HHIs in the Gulf Coast Production Area of 251 and 523 for working gas capacity and daily deliverability, respectively, are well below the Commission's 1800 HHI threshold, indicating that Black Bayou *acting together* with other storage providers and local gas producers cannot exercise market power. Additional evidence presented regarding other relevant factors further support the

conclusion that the Gulf Coast Production Area is highly competitive, and that Black Bayou lacks market power.

With respect to Black Bayou's proposed new firm and interruptible wheeling service, the provided hub analysis demonstrates that Black Bayou's 5.3 percent market share for receipt capacity and 4.9 percent market share for delivery capacity in the Gulf Coast Production Area are small, indicating that Black Bayou cannot exercise market power *acting alone*. The corresponding HHIs for hubs in the Gulf Coast Production Area of 1142 and 1102 for receipt and delivery capacity, respectively, are well below the Commission's 1800 HHI threshold, indicating that Black Bayou *acting together* with other hubs cannot exercise market power. Additionally, the bingo card demonstrated there are numerous good alternatives to Black Bayou's proposed wheeling service and that shippers can avoid Black Bayou's proposed wheeling service using alternative routes. Additional evidence presented regarding other relevant factors further support the conclusion that the Gulf Coast Production Area is highly competitive, and that Black Bayou will lack market power in the provision of its proposed new firm and interruptible wheeling service.

Based on these findings, I conclude that Black Bayou cannot exercise market power in the Gulf Coast Production Area and, therefore, Black Bayou can justify market-based rates for its firm and interruptible storage services, storage derivative hub services, and wheeling services provided by Black Bayou.

Q. Does this conclude your Prepared Direct Testimony?

A. Yes, it does.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Black Bayou Gas Storage, LLC	§ § §	Docket No. CP24-___-000

AFFIDAVIT OF
ALEXANDER KIRK

Alexander Kirk, being first duly sworn, on oath states that he is the witness whose testimony appears on the preceding pages entitled "Prepared Direct Testimony of Alexander Kirk" and that, if asked the questions which appear in the text of said testimony, he would give the answers that are therein set forth; and that affiant adopts the aforesaid testimony as Alexander Kirk's sworn testimony in this proceeding.

Alexander Kirk

Subscribed and sworn to before me, a Notary Public in and for _____,

this _____ day of July 2024.

Sunderland, MD 20689-0010

PRESENT POSITION

Vice President

EDUCATION

Master of Arts in Economics: 2008, University of Washington, Seattle, WA - Concentrations: Econometrics and Natural Resources
Bachelor of Science in Economics and Mathematics: 2005, Linfield College, McMinnville, OR

NATURE OF WORK PERFORMED WITH FIRM

Alex Kirk has testified on issues involving natural gas supply and demand, pipeline competition, and cost-of-service levelization for natural gas pipeline rate cases. I have also assisted clients with natural gas storage, pipeline, and electric generator market-based rate applications, economic life determinations, business risk, rate design, cost-of-service modeling, and other issues.

PREVIOUS EMPLOYMENT

September 2006 – May 2010: **University of Washington, Dept. of Economics**
UW Economics, 1100 Campus Parkway, Condon Hall Room 401, Seattle, WA 98195
Title: TA and Independent Instructor
Duties: I assisted a lecturing professor in a Principles of Microeconomics (Econ 200) course by providing additional lecture and instruction to 50 undergraduate students for two credit hours per week. From 2008 to 2010, I was an independent instructor for Principles of Microeconomics and Natural Resource Economics courses.

October 2006 – March 2007: **Greenfield Advisors**
2601 Fourth Ave., Seattle, WA 98121
Title: Research Analyst
Duties: I estimated hedonic models to measure damages to real estate value from environmental contamination. The results were used in testimony of class action lawsuits filed

against polluters. Settlements and litigation resulted in awards in excess of a hundred million dollars.

Summer 2006: **Federal Energy Regulatory Commission**
888 First St. NE, Washington, D.C. 20426
Title: Economist Intern
Duties: As a member of the Competition Analysis Group, I determined market competitiveness and provided analysis for a case involving an oil pipeline which applied for market-based rates. The economic impact of the case was approximately $90 million per year.

June 2004 – December 2005: **Oregon Economic and Community Development Department**
775 Summer St., NE, Suite 200, Salem, Oregon 97301-1280
Title: Research Analyst

TECHNICAL SKILLS

- Computer Applications: MS Office, Stata, Eviews, Matlab, Mathematica, IMPLAN, and various GIS software.
- Econometrics/Regression analysis
- Knowledgeable on Census, BLS, BEA, EIA, and various energy data
- Analysis of industry clusters
- Experience with geo-coded data
- Energy sector analysis
- Competition and regulatory analysis

AWARDS / SCHOLARSHIPS / TAships

- Trustee Scholarship (Linfield College)
- Psychology Competitive Scholarship (Linfield College)
- Dean's List (Linfield College, 4 semesters)
- Senior Economics Aware (Linfield College, Awarded by merit to one graduating senior)
- Steven Langton Teaching Award (University of Washington)

STUDY ABROAD

- Vienna, Austria (Fall 2002)
- Ghana (January 2004)
- Moscow and St. Petersburg, Russia (January 2005)

I. Purpose

Brown, Williams, Moorhead & Quinn, Inc. ("BWMQ") was retained by Black Bayou Gas Storage, LLC ("Black Bayou") to perform a market power study ("Market Power Study") to assess whether Black Bayou lacks market power in the provision of its proposed firm and interruptible storage, storage derivative hub services, and wheeling services in the relevant product and geographic markets and can therefore justify market-based rates for these services. Black Bayou's proposed facilities will be in Cameron and Calcasieu Parishes, Louisiana.

This market power study was conducted using the Commission's guidelines established in its 1996 Policy Statement,[1] the June 2006 Final Rule on *Rate Regulation of Certain Natural Gas Storage Facilities*,[2] its 2015 Opinion No. 538;[3] the 2018 DC Circuit Court Decision in ANR Storage Company;[4] the 2019 ANR Storage *Order on Remand* ("ANRS Order on Remand")[5] and orders issued by the Commission granting market-based rates for storage, hub, and wheeling services.[6]

(footnote continued)

II. Findings

This Market Power Study demonstrates that Black Bayou will not possess market power in the provision of firm and interruptible storage, storage derivative hub services, and wheeling services in the Gulf Coast Production Area (defined herein as eastern Texas, Louisiana, Mississippi and Alabama) utilizing its proposed facilities.

BWMQ has defined the relevant geographic and product markets consistent with the Policy Statement and Order No. 678. BWMQ has determined that the relevant geographic market for Black Bayou's proposed services is the Gulf Coast Production Area, the same narrow geographic market accepted by the Commission in granting authorization to provide storage and wheeling services at market-based rates in numerous other proceedings. BWMQ has determined that the relevant product market for its storage service includes interstate and intrastate underground natural gas storage facilities as well as local production. Based on these determinations, BWMQ concludes that Black Bayou has a very small market share in this region of approximately 0.6 percent for working gas capacity and 2.7 percent for daily deliverability, well below any level of market power concern expressed by the Commission. Further, the market is not concentrated, as evidenced by a Herfindahl-Hirschman Index ("HHI") calculation of 251 for working gas capacity and 523 for daily deliverability, both well below the 1800 HHI used by the Commission as the threshold to indicate a possible market power concern. Thus, based on this analysis, BWMQ concludes that Black Bayou cannot exercise market power acting alone or

---

Docket Nos. PR08-7-000, *et al.* (unpublished delegated letter order issued Apr. 18, 2008); *Monroe Gas Storage Co.*, 121 FERC ¶ 61,285 (2007); *Petal Gas Storage, LLC*, 118 FERC ¶ 61,253 (2007); *Caledonia Energy Partners*, 111 FERC ¶ 61,095 (2005); *Freebird Gas Storage, LLC*, 111 FERC ¶ 61,054 (2005); *Liberty Gas Storage, LLC*, 113 FERC ¶ 61,247 (2005); and *Pine Prairie Energy Center, LLC*, 109 FERC ¶ 61,215 (2004).

acting together with other storage providers in the Gulf Coast Production Area. A review of other relevant factors pertaining to storage, such as ease of entry, growing natural gas production and that Black Bayou is a new entrant into an already competitive market, further mitigate any remaining market power concerns.

Regarding the Black Bayou's proposed wheeling services, BWMQ performed a hub competition analysis and a "bingo card" analysis of alternative pipeline interconnections. Our analysis of the hub market shows that Black Bayou has a combined market share of 5.3 percent for receipt capacity and 4.9 percent for delivery capacity. These market shares indicate that there are numerous good hub alternatives to Black Bayou's wheeling services. The HHI in the geographic market for receipt capacity is 1142 and the HHI for delivery capacity is 1102, both well below the 1800 HHI threshold used by the Commission to indicate a possible market power concern. In addition, the bingo card analysis demonstrates that there are alternative pipeline interconnections for each of Black Bayou's proposed wheeling services and that Black Bayou cannot exercise market power. A review of other relevant factors pertaining to wheeling, such as ease of entry, the additional competition from market center operations, and that Black Bayou is a new entrant into an already competitive market, further mitigate any remaining market power concerns.

BWMQ submits that this Market Power Study conclusively shows that Black Bayou lacks market power, and is therefore eligible for, and entitled to receive, market-based rate authority for its proposed storage, storage derivative hub services, and wheeling services.

III. Facilities

Black Bayou's storage facilities will be located in the Black Bayou Salt Dome in Cameron Parish, Louisiana. The storage facility has a proposed working gas capacity of 34,720,000 thousand cubic feet ("Mcf") and a daily deliverability of 2,000,000 thousand cubic feet per day ("Mcf/d").

Black Bayou's header system will begin at the storage facility and extend north through Cameron and Calcasieu Parishes, ultimately terminating five miles northeast of Starks, Louisiana at an interconnect with Transcontinental Gas Pipe Line Company, LLC ("Transco"). The header system will consist of one high and one low pressure line, will be approximately 27 miles in length, and have a total capacity of 2,000,000 Mcf/d. Black Bayou intends to have bidirectional interconnects up to 500,000 Mcf/d with the following pipelines[7]:

1. Florida Gas Transmission Company, LLC
2. Golden Pass Pipeline LLC
3. Gulf Run Transmission, LLC
4. Kinder Morgan Louisiana Pipeline LLC
5. Port Arthur Pipeline, LLC - Louisiana Connector Project
6. Sabine Pipe Line LLC
7. Tennessee Gas Pipeline Company, L.L.C.
8. Texas Eastern Transmission, LP
9. Transco
10. Venture Global CP Express, LLC

A map of Black Bayou's proposed facilities is shown in Attachment 1, Map 1A.

[7] Venture Global CP Express LLC and the Port Arthur Pipeline, LLC Louisiana Connector Project are not currently operational. See https://ventureglobalLNG.com/cp2-lng/ and https://semprainfrastructure.com/what-we-do/energy-networks/port-arthur-pipeline-louisiana-connector for more information.

IV. Market-Based Rates for Storage and Storage Derivative Hub Services

The Commission examines market power for storage and wheeling services separately, with relevant markets and alternatives separately identified.[8] Market-based rates for Black Bayou's storage and storage derivative hub services is evaluated here in Section IV, and separately evaluated for Black Bayou's wheeling service in Section V.

A. Requirements for Market-Based Rates for Storage and Storage Derivative Hub Services

The Commission requires applicants for market-based rates for storage services to demonstrate that they lack market power. In Order No. 678, the Commission further elaborates on the ways in which the applicant can exercise market power.[9] The Commission identifies two principal aspects of market power: (1) Can the applicant withhold or restrict services and significantly increase price for a significant period of time; and (2) Can the applicant discriminate unduly in terms of price or conditions (in favor of its affiliates).[10] To show a lack of market power, the applicant must show that its customers have sufficient "good alternatives,"[11] or that it can mitigate its market power.[12]

In its 1996 Policy Statement, the Commission explains its analytical framework to show a lack of market power. The framework "includes three major steps: (1) define the relevant

---

[8] See, e.g., *Jefferson Island Storage & Hub LLC and Golden Triangle Storage, Inc.*, 163 FERC ¶ 61,049 at PP 8, 16, 17 (2018) Arcadia Gas Storage, LLC, 155 FERC ¶ 61,161 at PP 8, 11, 17-19 (2016), and *Tres Palacios Gas Storage*, 153 FERC ¶ 61,331 at PP 12, 23 (2015).

[9] The Commission defines market power as the ability of a pipeline to profitably maintain price above competitive levels for a significant period of time. See, *Policy Statement*, 74 FERC ¶ 61,076, 61,230.

[10] *Order No. 678*, 115 FERC ¶ 61,343.

[11] A "good alternative" is an alternative that is available soon enough, has a price that is low enough, and has a quality high enough to permit customers to substitute the alternative for the applicant's service. See, *Policy Statement* at 74 FERC ¶ 61,076, 61,231-32.

[12] *Order No. 678*, 115 FERC ¶ 61,343.

markets; (2) measure a firm's market share and market concentration; and (3) evaluate other relevant factors."[13]

In analyzing whether an applicant can exercise market power *acting alone*, the Commission initially considers the market share of the applicant:

> One of the indicators that has been examined to determine whether a seller could exercise market power acting alone is the seller's market share. A large market share is generally a necessary condition for the exercise of market power. If the seller has a small market share it is unlikely that it can exercise market power. But, a company with a large market share may not be able to exert market power if entry into the market is easy or there are other competitive forces at work.[14]

The Commission has found that applicants cannot exercise market power acting alone when the applicant's market share has been, in some instances, above 20 percent.[15]

To determine whether an applicant can exercise market power *acting together* with other sellers, the Commission initially considers the concentration in the market.[16] To measure market concentration, the Commission conducts an HHI analysis by summing the squares of each storage provider's market share. In *Avoca*, the Commission provides the following example:

> … suppose there are two sellers, one with a share of 75 percent and another one with 25 percent. The HHI will equal (.75)<2> + (.25)<2> = .5625 + .0625 = .6250….[17]

---

[13] *Policy Statement*, 74 FERC ¶ 61,076, 61,231.
[14] *Policy Statement*, 74 FERC ¶ 61,076, 61,234.
[15] *See, e.g., Copiah Storage, LLC*, 121 FERC ¶ 61,272 (2007) (22.7 percent market share for daily deliverability capacity); *ONEOK Gas Storage, L.L.C.*, 90 FERC ¶ 61,283 (2000) (market share of 21.8 percent for daily deliverability capacity);
[16] *Policy Statement*, 74 FERC ¶ 61,076, 61,234.
[17] *Avoca*, 68 FERC ¶ 61,045, 61,151 (1994) ("Avoca"). BWMQ follows the Department of Justice and the Federal Trade Commission's convention of converting the decimal form of the HHI (used for computational purposes) to whole numbers by multiplying the decimal form by 10,000. Thus, in our example above, the HHI of .6250 would be reported in the text as 6250 (= .6250 x 10,000). We think this form is more intuitive. For example, if the seller were a monopolist, the seller's market share would be 100 percent. Squaring the monopolist's market share would yield an HHI of 10000 (= 100 x 100).

If the HHI is small, the Commission will generally conclude that sellers cannot exercise market power acting together. However, if the HHI is high, the Commission will undertake further analysis. The Commission uses an HHI threshold of 1800 as an indicator of possible market power concerns warranting further analysis. Consequently, the level of scrutiny is greater if the HHI exceeds 1800.[18]

In addition to market share and market concentration (*i.e.*, HHI), the Commission will also consider other relevant factors and mitigation that might reduce any market power concerns.

Further, in Order No. 678, the Commission allowed the applicant to include non-storage alternatives in its market share and market concentration analysis. The Commission has identified available gas pipeline capacity, local gas production, LNG, and capacity release as possible "good alternatives" for storage.[19]

A finding that a facility lacks market power in the provision of storage services also applies to the provision of other hub services. With the exception for wheeling, which does not involve the storage of natural gas,[20] the other hub services (e.g., parking, loaning, balancing and imbalance trading) are derivatives of storage service. That is, each of these services is a form of storage service. Thus, if market-based rates can be justified for storage services, market-based

---

[18] *Policy Statement,* 74 FERC ¶ 61,076, 61,235; *Order No. 678,* 115 FERC ¶ 61,343 at P 51.

[19] *Order No. 678,* 115 FERC ¶ 61,343. In *Opinion No. 538,* 153 FERC ¶ 61,052 at P 162, [citing *UGI Storage Co.*, 133 FERC ¶ 61,073 at P 81 (2010)], the Commission ruled that intrastate storage and capacity release were good alternatives. However, the Commission further ruled that intrastate storage and capacity release were not sufficiently good alternatives to constrain ANR's exercise of market power. *Opinion No. 538,* 153 FERC ¶ 61,052, PP 219-20. The Commission's exclusion of intrastate storage and storage capacity subject to capacity release was reversed in *DC Circuit Decision ANRS,* 904 F.3d 1020 at PP 9-10. *See also ANRS Order on Remand,* 168 FERC ¶ 61,195 at P 21. On this basis, we consider both intrastate storage and capacity release to be good alternatives to Black Bayou's proposed new storage service.

[20] Wheeling does not involve the storage of gas; rather, it involves the transfer of gas from one interconnected pipeline to another. In this sense, wheeling is a substitute for pipeline interconnections, not an alternative to storage services.

rates are also justified for storage-derivative hub services. BWMQ's approach is supported by the Commission's decisions in a number of storage market-based rate cases.[21]

B. Relevant Product Market

Black Bayou seeks authority to provide a new storage service at market-based rates. The product market we have examined herein includes interstate and intrastate underground natural gas storage facilities as well as local production. The Commission has accepted a product market consisting of interstate and intrastate underground natural gas storage facilities in evaluating requests for market-based rates for storage services.[22] We also include local production in East Texas, Louisiana and Mississippi as the only non-storage alternative in this analysis.[23]

Local production meets the Commission's three requirements for a good alternative. As explained in Attachment 4, local production that is sold in the relevant geographic market during a peak period can be considered to be *readily available*, both in terms of ease of acquiring physical gas supplies and the ability for a shipper to transport these gas supplies. The *quality* of local production is identical to storage because both services provide an identical unit of natural gas at

[23] Local production was recognized by the Commission as a good alternative for storage in *Opinion No. 538,* 153 FERC ¶ 61,052, *DC Circuit Decision ANRS*, 904 F.3d 1020, *ANRS Order on Remand*, 168 FERC ¶ 61,195. *See also Spire Storage West,* 166 FERC ¶ 62,038 (2019); *UGI Storage Co.,* 133 FERC ¶ 61,073 (2010); *Magnum Gas Storage, LLC,* 134 FERC ¶ 61,197 (2011); and *Steckman Ridge, LP,* 123 FERC ¶ 61,248 (2008).

the same point in time. A map showing the location of natural gas production wells in the Gulf Coast Production Area are shown in Attachment 1, Map 1E.

Attachment 4 describes in detail our analysis showing that local production is *price comparable* to storage service. Local production is a commodity, whereas storage is a service provided over time. In determining whether local production is a good alternative to storage, the "time dimension" implicit in local production (*i.e.*, providing gas at peak rather than at off-peak times) must be analyzed. This analysis is provided in Attachment 4 at pages 1-2, which explains how local production can be tested for price comparability. As set out in Attachment 5, we estimated the price of local natural gas production using recent price data at the Henry Hub (located in Erath in Vermillion Parish, Louisiana, approximately 60 miles from Black Bayou) for future contract prices from CME Group and compared it to the threshold price of storage.[24] We found the price of local production to be less than the threshold price of storage. Thus, local production is price-comparable to storage. This analysis is explained in Attachment 4 at pages 3-6.

The presence of local production in the relevant market as an alternative to storage service limits the ability of storage providers to charge prices above competitive market levels. Given the price, quality, and availability of local production in the geographic market, customers of Black Bayou would be able to readily purchase local production as a good alternative to Black Bayou's proposed storage service if Black Bayou attempted to raise the storage price above a competitive

[24] The threshold price of storage is equal to the price of storage plus ten percent. *Policy Statement*, 74 FERC ¶ 61,076, 61,231. To be price comparable, the price of an alternative must be equal to or less than the threshold price of storage.

level. Our estimate of the quantity of local production that is included in the market is explained in Attachment 4 at pages 6-7. Local production by company is shown in Attachment 2. Local production had been accepted by the Commission as a good alternative to natural gas storage in the Gulf Coast Production Area as recently as October 2022.[25]

To summarize, local natural gas production meets the availability and quality requirements as well as the price comparability requirement of a good alternative. On this basis, we include local production in the relevant product market.[26]

C. Relevant Geographic Market

We have adopted the same narrow geographic market accepted by the Commission in numerous previous market-based rate proceedings: eastern Texas, Louisiana, Mississippi and Alabama, referred to herein as the "Gulf Coast Production Area."[27] This geographic market is supported by the vast amount of interconnected pipelines and the clustering of storage facilities located across the Gulf Coast Production Area. *See* Attachment 1, Map 1B and Map 1C. Our analysis is conservative because we did not include storage facilities in other nearby states, such

---

[25] *Transcontinental Gas Pipe Line Company, LLC*, 181 FERC ¶ 61,079 at P 23 (2022). *See also LA Storage, LLC*, 180 FERC ¶ 61,188 at PP 29-30 (2022), *Jefferson Island Storage & Hub, L.L.C.*, 175 FERC ¶ 61,074 at P 11 (2021); *Tennessee Gas Pipeline Company, L.L.C.*, 171 FERC ¶ 61,085 (2020) at P 17.

[26] This conclusion is consistent with *Opinion No. 538*, where the Commission agreed with ANR Storage and the Initial Decision that the relevant product market included local production in Michigan. *Opinion No. 538*, 153 FERC ¶ 61,052 at PP 65, 211.

as Arkansas, Oklahoma and the western portion of Texas, that are extremely well interconnected with the Gulf Coast Production Area and could easily have been justified as appropriate for inclusion in the relevant geographic market.

D. Market-Power Measures for Storage Services

Before we can properly determine the market share of each storage provider and the corresponding market concentration or HHI for the relevant geographic market, we must consider affiliate relationships for each of the storage providers and local producers in the Gulf Coast Production Area. The Commission's conceptual framework requires that the applicant aggregate its capacity and the capacity of its affiliates into one estimate. The results of this affiliate aggregation are shown in Attachment 2. Black Bayou is not affiliated with any other natural gas storage within the Gulf Coast Production Area.

Based on our review of the data set forth in Attachment 2, we have identified a total of 67 underground natural gas storage facilities when allocated by corporate ownership, including Black Bayou, as well as hundreds of local producers in the Gulf Coast Production Area. The total working gas capacity and deliverability for the storage facilities and local producers in the Gulf Coast Production Area is 5,437,151,582 Mcf and 75,374,352 Mcf/d, respectively. The proposed working gas capacity and daily deliverability of the Black Bayou facilities is 34,720,000 Mcf and 2,000,000 Mcf/d, respectively.[28] See Attachment 2 at page 2-3.

As shown in Attachment 2, Black Bayou has a 0.6 percent market share for working gas capacity and a 2.7 percent market share for daily deliverability in the Gulf Coast Production Area.

[28] Daily deliverability is identical to maximum withdrawal capacity.

The market share of Black Bayou is small and below any level that would raise market power concerns. The corresponding HHIs for the Gulf Coast Production Area are 251 and 523 for working gas capacity and daily deliverability, respectively, well below the 1800 threshold level used by the Commission to indicate possible market power concerns. See Attachment 2 at page 2-3.

This Market Power Study demonstrates that Black Bayou's market share and market concentration metrics are well below the levels in which the Commission has expressed market power concerns and are also consistent with the metrics proposed by other applicants that have been granted market-based rates.[29] Thus, BWMQ concludes that Black Bayou cannot act alone or together with other storage providers to exercise market power.

E. Other Relevant Factors

The purpose of this section is to provide the Commission with additional evidence that the Gulf Coast Production Area is highly competitive, and that Black Bayou should be granted market-based rate authority for its proposed storage service. We have considered a number of other relevant factors:

i. Entry into the market is easy: there are no substantial barriers to entry

The Commission considers ease of entry into the market (or the absence of significant barriers to entry) to be a factor that limits market power.[30] The low barriers to entry is demonstrated by the 63 underground natural gas storage projects in the Gulf Coast Production Area that have been certificated by the Commission since 2000 (*see* Attachment 3), and the

---

[29] *See* footnote 15.
[30] *Policy Statement*, 74 FERC ¶ 61,076, 61,235.

existence of 67 storage facilities allocated to numerous corporate owners in the Gulf Coast Production Area and hundreds of local producers (*See* Attachment 2). The Commission has found as recently as October 2022 that barriers to entry are likely to be low in the Gulf Coast Production Area.[31] BWMQ agrees with the previous Commission findings that entry into the Gulf Coast Production Area is relatively easy.

ii. The growth of Gulf Coast natural gas production may provide additional competition

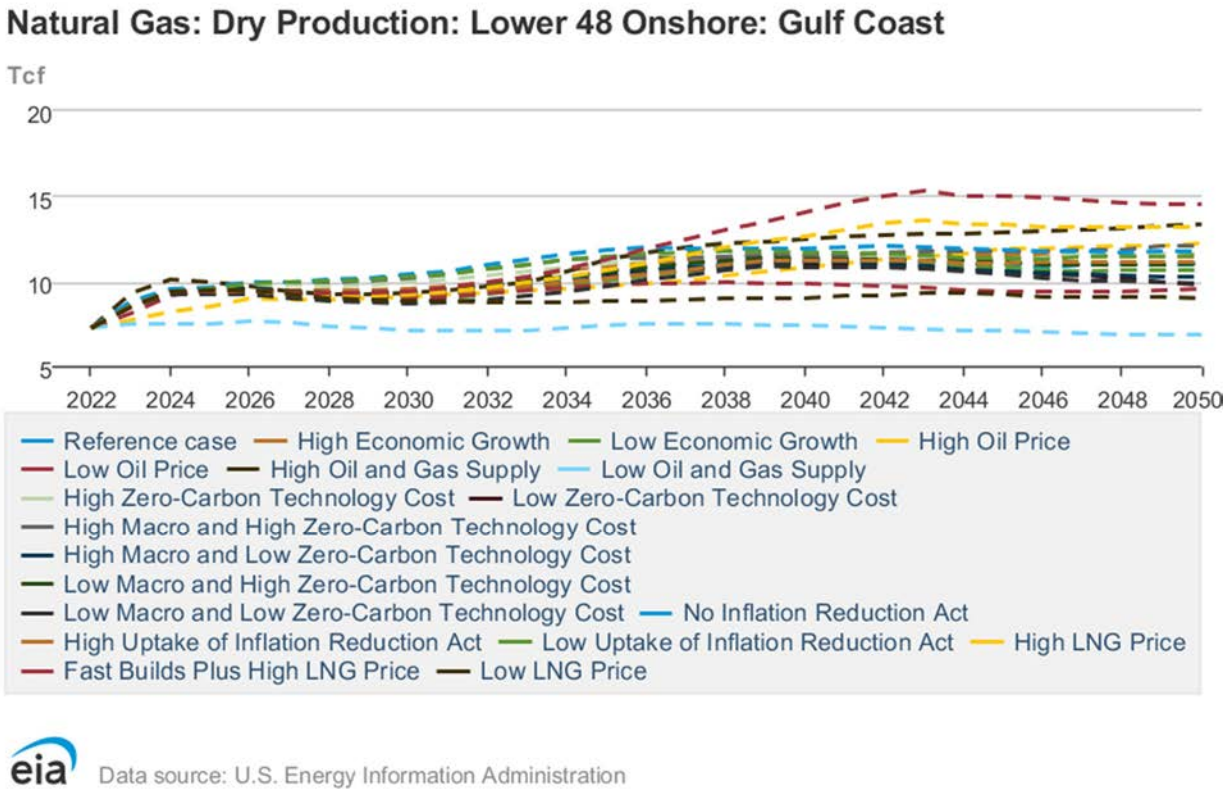

As natural gas production has increased in the United States from shale production, natural gas prices and price volatility have decreased. Where local producers increase production, the increase in good alternatives are likely to further decrease Black Bayou's market share and the market concentration measures (HHIs). Another way to view increased production is through its impact on the value of storage, which is a function of both seasonal movements of natural gas prices as well as shorter-term natural gas price volatility. When natural gas markets are susceptible to a high degree of price volatility (for seasonal storage, volatility can mean large price changes between peak and off-peak periods), market participants value storage as a method to hedge price risk. As production increases and volatility decreases, the value of storage will also decrease (all things being equal). Indeed, the EIA has recognized that increased natural gas production is displacing storage.[32]

[32] EIA, *Natural Gas Storage Dashboard* (January 24, 2020), https://www.eia.gov/naturalgas/storage/dashboard/commentary/20200124 (last visited February 2024).

The EIA prepares projections each year in its *Annual Energy Outlook*. Although there is much uncertainty in energy markets over long (multi-decade) time horizons, the EIA's 2023 projections of Gulf Coast natural gas production show increased natural gas production under all but one of its scenarios.

To the extent that such production comes to fruition, such increased production will provide additional competition to Black Bayou's proposed new storage service.

iii. Black Bayou is a new entrant in the provision of its proposed firm and interruptible storage service into an already competitive market

Black Bayou's proposed firm and interruptible storage services will introduce entirely new capacity into the Gulf Coast Production Area. Black Bayou will have no current firm and interruptible storage customers for its proposed services. To attract new customers, Black

Bayou's services must be offered on terms that are comparable to the services of alternative providers that are currently being used. Black Bayou will compete with 66 other storage facilities and hundreds of local producers identified in Attachment 2, none of which are owned by Black Bayou. Furthermore, the Commission has deemed the same product and geographic market as competitive as recently as October 2022.[33]

V. Market-Based Rates for Wheeling Services

Black Bayou is requesting authority from the Commission to provide firm and interruptible wheeling services at market-based rates.

A. Requirements for Market-Based Rates for Wheeling Service

While the specific markets and alternatives analyzed for storage and wheeling are different, the Commission's framework for evaluating market power for wheeling is similar to what is outlined in Section IV.A for storage. One analysis the Commission considers when evaluating the market power for a wheeling service is the applicant's market share and the market concentration of the hubs in the relevant geographic market.[34] An applicant's market share is an indicator of whether an applicant can exercise market power "acting alone," whereas the HHI indicates whether an applicant can "act together" with competing providers to exercise market power. The hub analysis includes the receipt and delivery capacity at alternative hubs and market centers in the relevant geographic market.[35] The Commission concludes that "if a seller has a small market share, it is unlikely that it can exercise market power."[36]

---

[33] *Transcontinental Gas Pipe Line Company, LLC*, 181 FERC ¶ 61,079 (2022).
[34] *See, e.g., Keystone Gas Storage, LLC*, 106 FERC ¶ 61,033 at P 27 (2004); *Atmos Pipeline and Storage, LLC*, 127 FERC ¶ 61,260 at P 33 (2009).
[35] *See, e.g., Atmos Pipeline and Storage, LLC*, 127 FERC ¶ 61,260 at P 33 (2009).
[36] *Policy Statement*, 74 FERC ¶ 61,076, 61,234.

In addition to the hub analysis, the Commission also uses the so-called "bingo card" analysis to assess "whether shippers can avoid the pipeline interconnections provided by the applicant by utilizing alternative interconnections available between the pipelines that are directly or indirectly connected to the applicant."[37] If shippers can avoid the facilities of the applicant, the applicant will be unable to exercise market power for wheeling services.

The bingo card is a matrix which identifies all possible pipeline interconnections attached to a hub. If the bingo card is completely filled-in, the Commission concludes that there are numerous good alternatives to the proposed wheeling service and that shippers can avoid an applicant's wheeling service using alternative routes.[38] As the Commission stated in approving firm and interruptible market-based wheeling services for Worsham-Steed, L.P. since "Worsham-Steed has several interconnections with pipeline alternatives and lacks market power, the rates it will be able to charge for its firm and interruptible transportations services will not be in excess of rates interstate pipelines and storage providers could charge for similar services."[39]

[37] *Golden Triangle Storage, Inc.*, 152 FERC ¶ 61,158 at P 14 (2015).
[38] *See, e.g.*, *Arlington Storage Company, LLC*, 125 FERC ¶ 61,306 at P 57 (2008); and *Enstor Houston Hub Storage and Transportation, LP*, 123 FERC ¶ 61,019 at P 34 (2008).
[39] *See Worsham-Steed, L.P.*, Docket No. PR08-23 (delegated letter order issued Sep. 25, 2008) ("Worsham-Steed"). The Commission also approved market-based rates for both firm and interruptible wheeling using a similar analysis in *Golden Triangle Storage, Inc.*, 152 FERC ¶ 61,158 (2015), *Tres Palacios Gas Storage LLC*, 153 FERC ¶ 61,331 at P 17 (2015), *Jefferson Island Storage & Hub LLC and Golden Triangle Storage, Inc.*, 163 FERC ¶ 61,049 (2018), and *Arlington Storage Company, LLC*, 163 FERC ¶ 61,077 (2018).

B. Relevant Product Market Definition

Wheeling involves the transfer of gas from one interconnected pipeline to another. In this sense, wheeling is a substitute for pipeline interconnections.[40] The market power analysis for a wheeling service first considers how a provider of wheeling service could use its interconnections with pipelines to transfer gas between these pipelines. The analysis then identifies good alternatives to each of the applicant's wheeling services.

Black Bayou proposes to offer firm and interruptible wheeling services at market-based rates. Black Bayou's facilities will have bi-directional interconnections with the ten interstate pipelines listed in Section III: Facilities, which include eight operational pipelines and two proposed pipeline projects that are not yet operational.

C. Relevant Geographic Market Definition

As the Commission has suggested, we define a narrow geographic market by starting with the location of Black Bayou, which is situated in a major natural gas production area, the Gulf Coast region. We have identified the relevant geographic market for Black Bayou as being comprised of Louisiana, where Black Bayou is located, and the neighboring states and regions of east Texas, Mississippi and Alabama. We define this relevant geographic market as the "Gulf Coast Production Area." This geographic market is supported by the vast amount of interconnected pipelines and the clustering of storage and hub facilities located across the Gulf Coast Production Area. *See* Attachment 1, Map 1B and Map 1C. The Commission accepted the

[40] The Commission requires two analyses to demonstrate that an applicant lacks market power in the provision of wheeling service: (1) the "bingo card analysis," and (2) a market share and market concentration analysis. *Southeast Gas Storage, LLC*, 125 FERC ¶ 61,307 at P 27, n. 22 (2008).

same geographic market definition in evaluating many recent market-based rate wheeling proposals in the Gulf Coast Production Area.[41] This geographic market definition is conservative since the geographic market was not expanded to include market centers or hubs in western Texas.

D. Evaluation of Market Share and Market Concentration

To evaluate the competitive effect of market centers or hubs on the ability of Black Bayou to exercise market power in the provision of firm and interruptible wheeling service, we analyzed the structure of the Gulf Coast Production Area based on the competition among the hubs in the market.

Attachment 16 lists the 22 hubs located within the Gulf Coast Production Area that offer transportation (or "wheeling") between 3 or more pipelines, including the proposed Black Bayou facilities. The total receipt and delivery capacity for the 22 hubs is 94,084 million cubic feet per day ("MMcf/d") and 101,760 MMcf/d, respectively. To be conservative, BWMQ included the expected interconnect capacity for both the operational and proposed, but not yet operational, pipelines in Black Bayou's market share.[42] Black Bayou has a market share of 5.3 percent of receipt capacity and 4.9 percent of delivery capacity. Such small market shares indicate that there are numerous good hub alternatives to Black Bayou's wheeling service. The alternative hub capacity is sufficient to replace Black Bayou's receipt and delivery capacity at least 18 times over.

---

[41] *LA Storage, LLC*, 180 FERC ¶ 61,188 (2022); *Jefferson Island Storage & Hub, L.L.C.*, 175 FERC ¶ 61,074 (2021); *Jefferson Island Storage & Hub LLC and Golden Triangle Storage, Inc.*, 163 FERC ¶ 61,049 (2018), *Arcadia Gas Storage, LLC*, 155 FERC ¶ 61,161 (2016), *Tres Palacios Gas Storage*, 153 FERC ¶ 61,331 (2015), Golden Triangle Storage, Inc, 152 FERC ¶ 61,158 (2015), and *Pine Prairie Energy Center, LLC*, 135 FERC ¶ 61,168 (2011) and *PetroLogistics Natural Gas Storage, LLC*, 139 FERC ¶ 61,225 (2012).

[42] As explained in Section III: Facilities, Venture Global CP Express LLC and the Port Arthur Pipeline, LLC Louisiana Connector Project are not currently operational. See https://ventureglobalLNG.com/cp2-lng/ and https://semprainfrastructure.com/what-we-do/energy-networks/port-arthur-pipeline-louisiana-connector for more information.

As a result, BWMQ concludes that the competition from hubs is sufficient to prevent Black Bayou from exercising market power *acting alone*.

To evaluate whether Black Bayou could *act together* with competing hubs to exercise market power, we computed and analyzed the HHI for market centers and hubs in the Gulf Coast Production Area. The HHI for receipt capacity is 1142 and the HHI for delivery capacity is 1102. These HHIs are well below the 1800 HHI threshold used by the Commission to indicate a possible market power concern. Thus, BWMQ concludes that Black Bayou cannot exercise market power *acting together* with competing hubs in the Gulf Coast Production Area.

E. Bingo Card Analysis

To demonstrate that there are pipeline interconnection alternatives to Black Bayou's proposed wheeling services available to its prospective customers, we performed a "bingo card" analysis. The first step in the bingo card analysis is to identify the wheeling services that Black Bayou proposes to offer. The firm and interruptible wheeling service options that Black Bayou proposes to offer are represented in Attachment 6. Excluding the two proposed pipelines that are not yet operation, the eight pipelines from which Black Bayou can receive natural gas are listed in the first column as "delivering pipelines" (or "receipts" from the hub's perspective), and the eight pipelines to which Black Bayou can deliver natural gas are listed in the first row as receiving pipelines (or "deliveries" from the hub's perspective).

The next step in the bingo card analysis is to identify the pipeline interconnections that are good alternatives to Black Bayou's wheeling service. Since Black Bayou is not yet in service, all prospective shippers are currently using alternative services. Once both Black Bayou commences service, there continue to be both direct and indirect pipeline interconnections

available to shippers. Thus, we included both direct and indirect alternative pipeline interconnections.[43] Direct pipeline interconnections are connections that involve only the pipelines that connect to Black Bayou. Indirect pipeline interconnections include pipeline paths that contain a connecting pipeline with a receipt point on an inbound pipeline to Black Bayou and a delivery point on an outbound pipeline to Black Bayou. For each of the proposed firm and interruptible wheeling services, the direct and indirect pipeline interconnections and their corresponding capacities are reported in Attachment 7.

The "bingo card" is a matrix that: (1) identifies all possible pipeline interconnects attached to Black Bayou's proposed header pipeline, and (2) indicates where good alternatives exist. Since there are 8 inbound and 8 outbound interconnects anticipated to connect with Black Bayou, the bingo card is a 8 x 8 matrix, showing the maximum number of proposed wheels. The number of proposed wheeling services is 56 (= 64 minus the 8 wheeling options that must be excluded because gas would to be wheeled both to and from the same pipeline). *See* Attachment 6.

Each alternative pipeline interconnection and its corresponding capacity are listed in Attachment 7.[44] The bingo card shows that at least one alternative pipeline path exists for each proposed wheel. Thus, the bingo card is completely "filled-in." Shippers can therefore avoid Black Bayou's proposed firm and interruptible wheeling services by using alternative pipelines that are directly or indirectly connected to Black Bayou's facilities. In *Worsham-Steed*, a 60-

---

[43] The Commission allows both direct and indirect pipeline interconnections in the bingo card analysis. *See, e.g., Cadeville Gas Storage, LLC*, 132 FERC ¶ 61,115 at P 33 (2010); *BCR Holdings, Inc*., 132 FERC ¶ 61,085 at P 31 (2010); *Arlington Storage Company, LLC*, 125 FERC ¶ 61,306 at P 57 (2008); *Unocal Keystone Gas Storage, LLC*, 106 FERC ¶ 61,033 at P 18 (2004).

[44] The direct and indirect pipeline interconnections that comprise each alternative shown in Attachment 6 are listed in Attachment 7.

mile bi-directional header pipeline, the Commission found that Worsham-Steed's bingo card analysis showed that there were alternative transportation routes that enabled its customers to obtain transportation service without relying on Worsham-Steed's services. The Commission concluded:

> Since Worsham-Steed has several pipeline interconnections with pipeline alternatives and lacks market power, the rates that it will be able to charge for its firm and interruptible transportation services will not be in excess of the rate interstate pipelines and storage providers could charge for similar services.[45]

Based on the bingo card analysis for Black Bayou, BWMQ concludes that Black Bayou cannot exercise market power in the provision of its proposed firm and interruptible wheeling service. If Black Bayou were to attempt to raise the price of its proposed wheeling service above the competitive level, its customers could avoid the price increase by switching to one of the alternative pipeline paths.

In addition, the replacement capacity of the alternative pipeline interconnections (shown in Attachment 7) is quite substantial compared to the wheeling capacity of Black Bayou. The total daily deliverability of the identified alternative pipeline interconnections is 101,550,124 Mcf/d (Attachment 6 and 7), is significantly more than Black Bayou's proposed maximum header capacity of 2,000,000 Mcf/d.

F. Other Relevant Factors

The purpose of this section is to provide the Commission with additional evidence that the Gulf Coast Production Area is highly competitive, and that Black Bayou should be granted

---

[45] *Worsham-Steed*, Docket No. PR08-23 *at* 2.

market-based rate authority for its proposed wheeling service. We have considered a number of other relevant factors:

1. Entry into the market is easy: there are no substantial barriers to entry

Entry into the Gulf Coast Production Area is easy. Attachment 10 identifies 22 hubs owned by at least 12 separate corporate entities (Agua Dulce Hub is not controlled by a single entity, rather it is an amalgamation of pipeline and header systems). The large number of market participants, each with a relatively small market-share, is indicative of a market where entry is easy. Many of these hub competitors offer wheeling at market-based rates and have been constructed since 2000. *See* Attachment 9. The Commission has also agreed that entry is easy in the provision of wheeling services in numerous orders approving market-based rates in the U.S. Gulf Coast.[46]

2. Black Bayou is a new entrant in the provision of its proposed firm and interruptible wheeling service into an already competitive market

Black Bayou's proposed firm and interruptible wheeling services will introduce entirely new capacity and it will have no current customers for these proposed services. Consequently, it must compete for customers who are currently being served by alternative providers, in a market previously determined to lack concentration, and must do so at an attractive price.[47] Black Bayou will compete with 21 other hubs identified in Attachment 10. For these reasons, the alternatives to Black Bayou's proposed interruptible and firm wheeling service, which currently serve the

---

[46] *Jefferson Island Storage & Hub LLC and Golden Triangle Storage, Inc.*, 163 FERC ¶ 61,049 (2018) at PP 7, 17-18. See also *Arcadia Gas Storage, LLC,* 155 FERC ¶ 61,161 (2016) at P 18 and *Tres Palacios Gas Storage,* 153 FERC ¶ 61,331 (2015) at PP 22-23.

[47] The Commission examined a hub analysis in the Gulf Coast Production area and determined that the area "lacked market concentration." *Banquete Hub LLC,* 166 FERC ¶ 61,101 at P19 (2019).

Gulf Coast Production Area, represent good alternatives to Black Bayou's proposed services. This reasoning was accepted by the United States Court of Appeals in the *Mobil Pipeline Co. v. FERC*, 676 F.3d 1098 (D. C. Cir. 2012) ("*Mobil Pipeline Company*"). The Court reasoned that before the applicant proposed its new service, the market was competitive; prior to the applicant's proposed new service, the alternatives were available to the potential customers of the applicant. The court concluded that "[i]t is difficult to believe that these alternatives… are no longer viable or competitive…"[48] Thus, the alternatives provided in Attachment 10 are good alternatives, and Black Bayou's new capacity will only increase competition in the Gulf Coast Production Area.

3. Additional competition from market center operations

Transactions at market centers and other trading hubs also compete with the transportation services offered by Black Bayou. Traditionally, if a market participant wanted to transfer natural gas from Pipeline A to Pipeline B, for example, the participant would be required to find physical interconnects that link the two pipelines. Following the development of sophisticated market centers and trading hubs, however, shippers are now able to engage in deals that allow them to effectively "transfer" gas from Pipeline A to Pipeline B without the need for physical interconnects. Market centers offer title transfer, hub-to-hub transfer services, and electronic trading which allow shippers to transfer ownership rights not only directly, by trading gas on Pipeline A for gas on Pipeline B, but also indirectly, by selling gas on Pipeline A while simultaneously purchasing gas on Pipeline B.

[48] *Mobil Pipeline Co. v. FERC*, 676 F.3d 1098 at 1102.

Market center operations offer far more services and trading possibilities than are represented by their physical facilities listed in Attachment 10. Numerous trading hubs exist throughout the Gulf Coast Production Area offer locations for trading facilitated by exchanges such as the Intercontinental Exchange and the New York Mercantile Exchange (owned by CME Group).[49] Such trading hubs are often located on pipelines that frequently include a significant amount of interconnection capacity with other nearby pipelines. Given the large number of market centers and trading hubs the competition for wheeling service is far greater than suggested by the physical facilities of competitors listed in Attachment 10.

VI. Conclusions

The major conclusions of our Market Power Study in support of market-based rates for Black Bayou's proposed new storage and storage derivative hub services are the following:

1. The proposed new services are in a highly competitive market where numerous alternatives exist.

2. In the Gulf Coast Production Area, Black Bayou's working gas capacity and daily deliverability market shares are 0.6 percent and 2.7 percent, respectively, well below levels accepted by the Commission in other market-based rate proceedings. Therefore, Black Bayou cannot exercise market power *acting alone*.

3. In the Gulf Coast Production Area, the market concentration estimates (*i.e.*, HHIs) computed on working gas capacity and daily deliverability are 251 and 523, respectively, well below the Commission's 1800 HHI threshold, indicating that Black Bayou acting *together* with other competing storage providers cannot exercise market power.

4. Other relevant factors pertaining to storage, such as ease of entry, growing natural gas production and Black Bayou is a new entrant into an already competitive market, mitigate any remaining market power concerns.

---

[49] *See e.g.*, https://www.theice.com/publicdocs/NA_Phys_Gas_hubs.pdf.

The major conclusions of our market power study in support of market-based rates for Black Bayou's proposed new firm and interruptible wheeling services are the following:

1. Black Bayou is in a highly competitive market where numerous wheeling alternatives exist for potential customers.

2. Black Bayou has a market share of 5.3 percent for receipt capacity and a market share of 4.9 percent for delivery capacity in the Gulf Coast Production Area, indicating that Black Bayou cannot exercise market power acting alone.

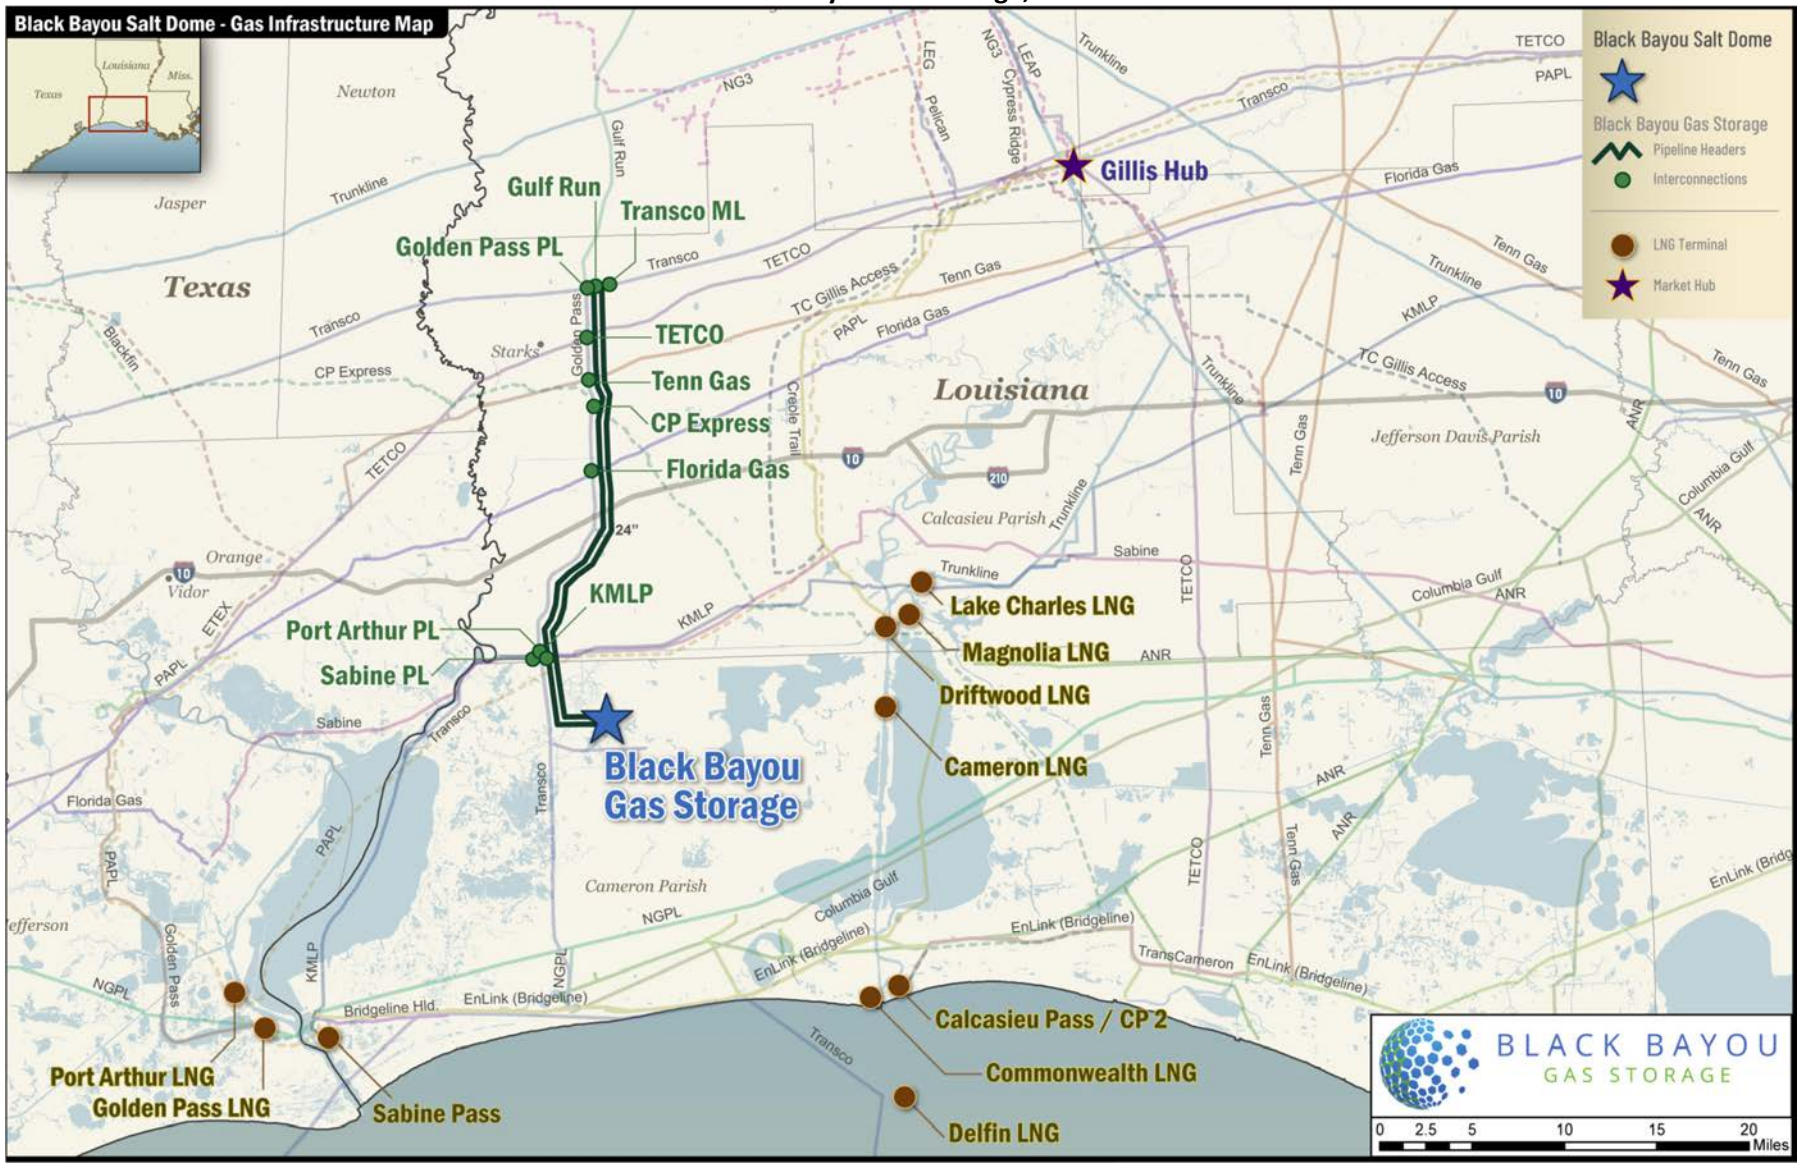

3. The HHIs computed on hub receipt capacity and delivery capacity of 1142 and 1102, respectively, are below the Commission's 1800 HHI threshold, indicating that Black Bayou acting together with other competing hub providers cannot exercise market power in the provision of interruptible wheeling services in the Gulf Coast Production Area.

4. Our bingo card analysis demonstrates that there are alternatives for each of Black Bayou's wheeling services. The bingo card is completely "filled-in." The presence of many alternatives indicate that Black Bayou cannot exercise market power in the provision of wheeling services in the Gulf Coast Production Area.

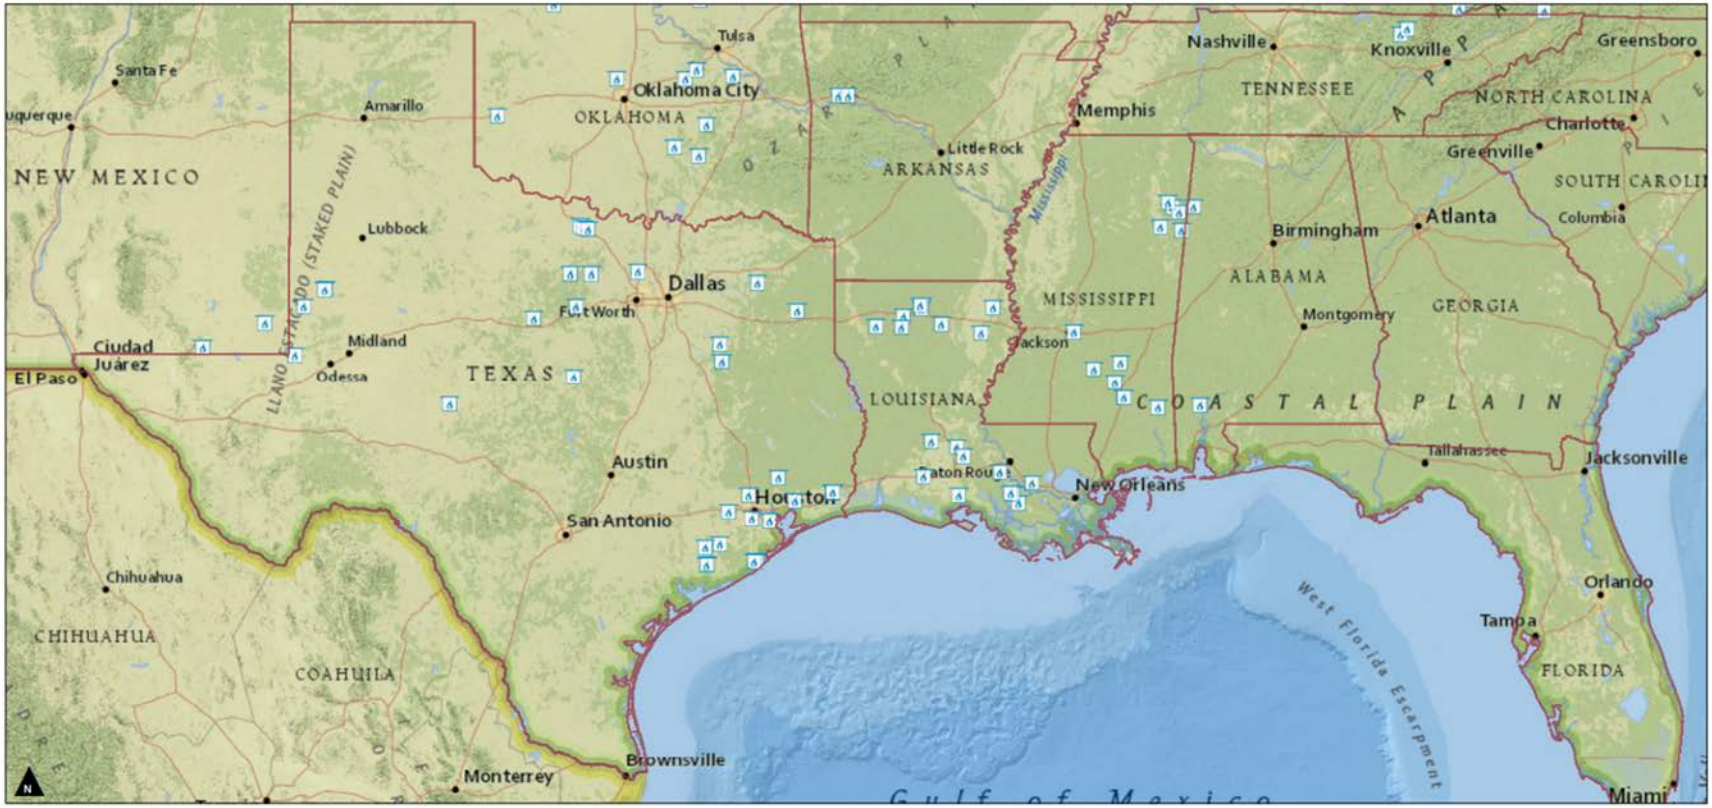

5. Other relevant factors pertaining to wheeling, such as ease of entry, the additional competition from market center operations, and that Black Bayou is a new entrant into an already competitive market, further mitigate any remaining market power concerns.

Based on these findings, BWMQ concludes that Black Bayou cannot exercise market power in the Gulf Coast Production Area and, therefore, Black Bayou should be granted market-based rate authority for its proposed firm and interruptible storage services, storage derivative hub services, and firm and interruptible wheeling services to be provided by Black Bayou.

Data Source:

Storage data: Energy Information Administration, 2023 Form EIA-191A.

Local production data: Texas Railroad Commission, Louisiana Department of Natural Resources, Mississippi State Oil & Gas Board.

Attachment 2 - Natural Gas Storage Fields in Operation and Local Production in the Gulf Coast Production Area: Market Share and HHI

State	Owner	Operator	Gas Storage Field	Working Gas Capacity (Mcf)	Market Share	HHI	Daily Deliverability (Mcf/d)	Market Share	HHI
(a)	(b)	(c)	(d)	(e)	(f)	(g)	(h)	(i)	(j)

Storage Notes:

[1] Natural Gas Pipeline Company is owned 37.5% by Kinder Morgan, 25% by Brookfield Infrastructure Group, and 37.5% by ArcLight Capital Partners LLC.

[2] Centana Intrastate Pipeline, LLC is owned by DCP Midstream. DCP Midstream is 13.2% owned by Enbridge (U.S.) Inc. and 86.8% owned by Phillips 66.

[3] Freebird Gas Storage, LLC (Enstor Gas, LLC) owns 87% and Northwest Alabama Gas District owns 13% of working gas at the East Detroit gas storage field.

[4] Southern Natural Gas is owned 50% by Kinder Morgan and 50% by the Southern Company.

[5] Bear Creek Storage Company is owned 75% by Kinder Morgan and 25% by Southern Company.

[6] Trinity Gas Storage, LLC is projected to be in-service in 2024. See https://trinitygasstorage.com/. Working gas and daily deliverability figures from Case OG-23-00012908 and OG-23-00012909 from the Railroad Commission of Texas.

[7] GEP Haynesville II, LLC is owned 30% by Williams.

Attachment 3 - Certificated Natural Gas Storage Projects Since 2000

**Attachment 4 -- Local Production is a Good Alternative to Storage:
Gulf Coast Production Area**

I. Local Production is a Good Alternative: Theory

Local production meets all three of the Commission's requirements for a good alternative. The Commission has found that, in order to be a good alternative, the alternative must be comparable in terms of availability, quality, and price.[1] As discussed in Section II.B below, local production that is sold in the relevant geographic market during a peak period can be considered *readily available*, both in terms of ease of acquiring physical gas supplies and the ability for Black Bayou customers to transport these gas supplies. The *quality* of local production is *identical* to storage because both services provide an identical unit of natural gas at the same point in time.

Price comparability of local production and storage cannot be established without further explanation. Since we are interested in showing that local production is a good alternative to storage during the winter season, the price we examine is the gas price for peak period consumption in a given geographic market. To make a meaningful price comparison, we must first unbundle the components of price paid by end-use customers for choosing natural gas either withdrawn from storage or supplied directly from local production. Local producers will sell their gas at the prevailing price[2] in the geographic

1 *Alternatives to Traditional Cost of Service Ratemaking for Natural Gas Pipelines and Regulation of Negotiated Transportation Services of Natural Gas Pipelines*, 74 FERC ¶ 61,076 (1996) ("Policy Statement").

2 The prevailing price of gas includes any transportation costs associated with sources of gas located outside of the geographic market (such as potential supplies produced in the Marcellus Shale and transported to the Gulf Coast). Since a storage customer of Black Bayou must already have transportation capacity on pipelines within the geographic market from the origin and to its ultimate destination, there are no additional transportation costs associated with local production. Thus, within the geographic market, transportation costs are assumed to be zero. The prevailing price of gas in the geographic market is the same regardless of its source of supply. The intuition is that all sellers will

market in both the off-peak and peak periods. The prevailing price for natural gas in the peak period is higher than that of the off-peak period. The price at which end-use customers can purchase gas offered by local producers during peak periods is therefore equal to (1) the prevailing price of gas during the off-peak period plus (2) a *peak-price premium*. In contrast, the price for end-use customers utilizing storage for peak consumption consists of (1) the prevailing price of gas during the off-peak period plus (2) the price of storage.

Thus, the price to the end-use customer for either utilizing local production or storage for peak consumption has a common price component, the prevailing price of gas during the off-peak period. If this common cost component is subtracted from the price of each alternative, the price to the end-use customer during the peak period from utilizing local production reduces to the peak-price premium, and the price from utilizing storage reduces to the price of storage. If the peak-price premium for local production is less than or equal to the price of storage plus ten percent, local production meets the price comparability requirement for a good alternative.[3]

To summarize, local gas production meets the availability and quality requirements for a good alternative. As we will show in the Section II.A. below, local production also meets the price comparability requirement of a good alternative. In Section II.B., we

---

flock to the highest market price, driving the price down; and all buyers will flock to the lowest market price, driving it up. In an efficient market, the convergence on one price is instant. Thus, the prices of local and imported production delivered to the geographic market are identical. This concept is sometimes referred to as the Law of One Price.

3 The Commission uses a ten percent threshold price increase to identify good alternatives. *Policy Statement*, 74 FERC ¶ 61,076, 61,231.

estimate the total amount of local production of natural gas that is available to the market. On this basis, we include local gas production in the relevant product market.

II. Local Production is a Good Alternative: Evidence

A. The price comparability of local production

To compare the price of local production to storage, the *peak-price premium*[4] for local production must be calculated. One method to calculate this peak-price premium is to use the futures price differential for the relevant geographic market.[5] A futures contract is an agreement to buy or sell an asset, traded on an exchange, at a specified future time. Futures prices of natural gas are available from CME Group for the Henry Hub. The futures contracts at Henry Hub, located in Erath, Louisiana, is regarded as the most liquid trading location for natural gas and is located only approximately 60 miles from Black Bayou.

A price differential is calculated between the summer (injection) and winter (withdrawal) seasons[6] between 2024/2025, 2025/2026 and 2026/2027. These calculations are shown in Attachment 5. The resulting price differential varies from $0.6516/Mcf to 0.8618/Mcf. The average price differential across all three seasons, $0.7268/Mcf, is used for this analysis. If local production is to be price comparable to storage, the threshold price for storage must be equal to or greater than the peak-price premium of $0.7268/Mcf

4 The peak-price premium and all futures prices are per MMBtu (or equivalently, per Mcf).

5 This method uses the same methodology suggested by the Commission in *Koch Gateway Pipeline Company*, 85 FERC ¶ 61,013 (1998) ("*Koch*"). In *Koch*, the price differential involved measuring prices between two locations at a given point in time, whereas, in this case, the price differential involves measuring prices at two points in time at a given location.

6 The differential is calculated using the average monthly prices for the shoulder months (August through October) and the winter months (November through March).

The next step is to determine the threshold price for storage. This proxy storage price should represent the long-run marginal cost of storage.[7] Since cost-based storage rates determined by the Commission are meant to represent the long-run marginal cost of providing storage,[8] we examine six FERC jurisdictional cost-based storage rates for providers in the Gulf Coast Production Area. See Attachment 6.

Cost-based storage rates typically involve four components: (1) a deliverability charge (sometimes called a "reservation" charge), (2) a capacity charge (sometimes called a "space" charge), (3) an injection charge, and (4) a withdrawal charge. Firm storage customers typically contract on an annual basis. Generally, the total deliverability charge on a unit of gas can be calculated by multiplying a storage facility's deliverability rate by 12 months and dividing by the days of service (the number of withdrawal days). Since working gas capacity in the storage facility is required to be contracted for annually, the total capacity charge is equal to the monthly capacity rate times 12 months. An injection and withdrawal charge are both charged once for each unit of gas stored in the facility. The deliverability, capacity, injection, and withdrawal charges for each of the seven storage companies are identified and the total unit storage cost for each company is calculated and presented in Attachment 6. Since each storage facility's total storage charge is based on its own specific days of service (the days to withdraw the full stored quantity), a comparable storage charge based on the Black Bayou's estimated 27-day of service (*e.g.*,

7 *See Koch*, 85 FERC ¶ 61,013, 61,045-46.

8 In *Mobil Pipeline Company*, 133 FERC ¶ 61,192 at P 22 (2010), the Commission determined that the pipeline's cost-based tariff was an appropriate estimate of the long-run competitive price. *See also Koch*, 85 FERC ¶ 61,013, 61,045-46.

Black Bayou's working gas capacity can be fully withdrawn in 27 days), is also presented in Attachment 6. This comparable storage charge ensures an "apples-to-apples" comparison between storage facilities that offer a different level of deliverability. The total storage charges range from a low of $0.9998/Mcf to a high of $2.6820/Mcf. We use the average total charge across all seven storage rates of $1.6414/Mcf. To account for the threshold price increase, we increase this total storage charge by 10 percent, which yields a threshold price of $1.8056/Mcf. Thus, for local production to be price comparable to storage, the peak-price premium must be equal to or less than $1.8056/Mcf on average.

The last step is to compare the peak-price premium to the threshold price for storage. Since the peak-price premium of $0.7268/Mcf is less than the $1.8056/Mcf average threshold price for storage, we find that local production is price comparable to storage.

There are many reasons why our finding that local production is price comparable to storage based on the $1.6414/Mcf average storage rate is a conservative one. Economic theory suggests that the price of the marginal supplier (at a price that recovers both marginal costs and fixed costs with a reasonable rate of return) can be representative of the long-run competitive price in the market. The price of the marginal supplier can be estimated as either the marginal cost of the highest price provider in the market, or the price to build additional capacity in the market. The highest cost-based storage rates (*i.e.*, the marginal supplier) in our sample has a threshold price of $2.9502/Mcf ($2.6820/Mcf + 10%). Since we used the the average storage cost of the cost-based storage rates in the geographic market, the actual long-run competitive price of storage is under-estimated.

Lastly, even if the lowest cost-based storage rate is used to estimate the threshold price of storage, local production is still price comparable. Thus, our estimate of price comparability is conservative, and our evidence presents a strong finding.

B. The quantity of local production

Local production should be considered readily available. The natural gas commodity market is extremely liquid, with quantities of natural gas available at the prevailing market price in each region or trading location. Local production in the Gulf Coast Production Area is readily available to potential customers of Black Bayou. Since numerous interstate and intrastate pipelines traverse the Gulf Coast Production Area, as shown in Attachment 1, Map 1D, production is readily accessible to customers of Black Bayou. The amount of production available during an estimated 151-day winter period is utilized as a proxy for working gas capacity, and daily production is used to estimate daily deliverability.

Attachment 2 shows the estimated amount of natural gas that is available in the Gulf Coast Production Area by company based on publicly available production data from the Texas Railroad Commission,[9] the Louisiana Department of Natural Resources, and the Mississippi State Oil & Gas Board. Where monthly production data was available (*i.e.*, for East Texas and Mississippi) winter availability was estimated by summing production from November 2022 to March 2023 and daily deliverability is estimated by dividing winter production by 151 days. Where only annual production data was available (*i.e.*, for Louisiana) 2022 annual production was divided by 365 days to estimate daily deliverability

[9] East Texas production includes Texas Railroad Commission District 1, 2, 3, 4, 5, 6, 6E, 7B and 9.

and that amount was multiplied by 151 days to estimate winter availability. As shown in Attachment 2 the estimated winter production (i.e., the proxy for working gas capacity) is 4,176,478,126 Mcf. The estimate for daily deliverability for local production is 27,658,796 Mcf/d.

Source: Capacities listed are Operational Capacity from publicly available Informational Postings websites of the delivering and receiving pipelines.

* Maximum deliverability for each path is limited by the smallest total capacity between any two pipelines in the path. Direct connections are aggregated. Total alternative capacity for each wheeling option equals the sum of the direct and indirect paths.

** Via backhaul.

Black Bayou Gas Storage, LLC

FERC Docket No. CP24-___-000

Exhibit I-I

Open Season Notice

(follows this cover sheet)

June 6, 2024

BLACK BAYOU GAS STORAGE: NOTICE OF NON-BINDING OPEN SEASON FOR FIRM STORAGE SERVICE FROM CAVERNS 1 AND 2

OVERVIEW

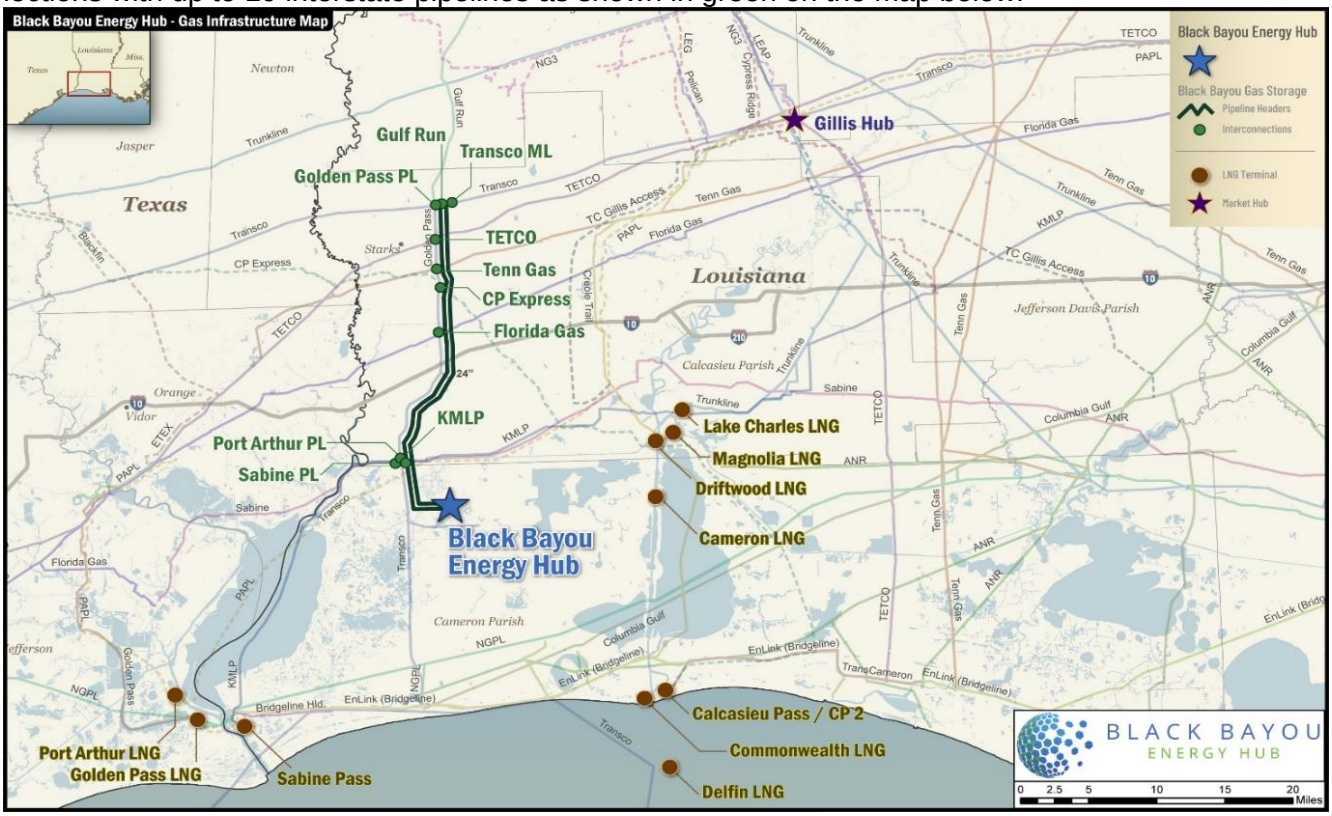

Black Bayou Gas Storage LLC ("Black Bayou") is developing a FERC-regulated, interstate natural gas storage project in Southwest Louisiana (the "Project"). To support development of the Project, Black Bayou is soliciting non-binding bids for Firm Storage Service ("FSS Service") through this Open Season for natural gas storage capacity, with a contemplated working gas capacity of up to 16 BCF in two underground natural gas salt dome storage caverns ("Cavern 1" and "Cavern 2"). Cavern 1 and Cavern 2 are expected to be available for Firm Storage Service on a phased basis commencing in April 2028 and July 2028, respectively.

Black Bayou may expand the project design to include incremental caverns to support market interest received in this Open Season. Such additional caverns would be available for FSS Service in 2030 or later. The anticipated in-service date of each cavern would be subject to change based on final project design and the receipt of necessary regulatory approvals for the Black Bayou project.

Interested bidders should fill in the Bid Form in this notice and email it to DCraig@BlackBayouEnergyHub.com by 7:00 PM, Central Daylight Time (CDT), on **Thursday, June 27, 2024**.

PROJECT DESCRIPTION

Black Bayou is developing a highly interconnected, high-turn interstate natural gas storage facility in the Black Bayou Salt Dome in Cameron and Calcasieu Parishes in Louisiana. Located near the Texas / Louisiana border in the heart of "LNG Alley" between growing upstream supply basins and downstream demand centers, Black Bayou will provide critical, flexible, and reliable balancing services to natural gas producers and consumers throughout the U.S. Gulf Coast. The Project will provide essential storage services to customers via connections with up to 10 interstate pipelines as shown in green on the map below.

BLACK BAYOU
GAS STORAGE

OPEN SEASON PROCESS

This non-binding Open Season for FSS Service will commence on Thursday June 6, 2024 and conclude at 7:00 PM CDT **Thursday, June 27, 2024** (the "Bid Period"). As further detailed below, Black Bayou is soliciting non-binding bids for up to 16 BCF of Firm Storage Service to be provided under Rate Schedule FSS in the proposed Black Bayou FERC Gas Tariff.

After the close of this Open Season, Black Bayou will contact selected bidders to execute a confidentiality agreement and negotiate a binding Precedent Agreement ("PA") in connection with its determination of steps with respect to the development and construction of the Project. Black Bayou anticipates finalizing PAs by August 31, 2024.

OPEN SEASON REQUIREMENTS

- **Primary Term ("Term")**: Bids must have a minimum Term of at least 5 years. Unless otherwise noted in the bidder's Bid Form, all bids will be assumed to be for capacity that may be served by both Cavern 1 and Cavern 2 on a phased basis, with partial service commencing on the Cavern 1 in-service date and increasing on the Cavern 2 in-service date.
- **Maximum Storage Quantity ("MSQ")**: Black Bayou is soliciting non-binding bids for FSS Service, with a contemplated working gas capacity of up to 16 BCF of MSQ, with FSS Service beginning with the Commencement of Service from Cavern 1 and Cavern 2 anticipated for April 2028 and July 2028, respectively. Minimum bids of at least 0.5 BCF of MSQ are required. Maximum bids of 8.0 BCF of MSQ will be accepted.
- **Maximum Daily Injection Quantity ("MDIQ")**: Bidders are requested to submit bids using an MDIQ ratio of 25,000 Dth/d per 1 BCF of MSQ
    - Non-conforming MDIQ ratio bids will be accepted and considered. Bidders wishing to bid for a non-conforming MDIQ ratio must detail such request in the notes section of the Bid Form.
- **Maximum Daily Withdrawal Quantity ("MDWQ")**: Bidders are requested to submit bids using an MDWQ ratio of 35,000 Dth/d per 1 BCF of MSQ.
    - Non-conforming MDWQ ratio bids will be accepted and evaluated. Bidders wishing to bid for a non-conforming MDWQ ratio must detail such request in the notes section of the Bid Form.
- **Primary Receipt Point(s) and Primary Delivery Point(s)**: Bidders must specify desired Primary Receipt Point(s) and Primary Delivery Point(s) among the options specified in the Bid Form and must submit requested allocation of Maximum Daily Receipt Quantity ("MDRQ") and Maximum Daily Delivery Quantity ("MDDQ") rights among the desired Primary Receipt Point(s) and Primary Delivery Point(s). Bidders are requested to submit bids which do not allocate more than 40% of total MDRQ to any single Primary Receipt Point or more than 40% of total MDDQ to any single Primary Delivery Point.
- **Storage Reservation Charge ("Rate")**: Bids must include a Rate in U.S. Dollars per Dth of MSQ per Month. Tiered or alternative pricing structures will be accepted and evaluated. Bidders should clearly define any non-conforming pricing mechanisms in the notes section of the Bid Form.
- **Ratchets, Fuel Reimbursement, and Storage Injection and Storage Withdrawal Charges**: Bidders are requested to submit bids that include the specified Ratchets, Fuel Reimbursement percentage, Storage Injection Charge, and Storage Withdrawal Charge listed in the Bid Form. Bidders wishing to bid for non-conforming Ratchets, Fuel Reimbursement percentages, Storage Injection Charges, or Storage Withdrawal Charges must detail those parameters in the notes section of the Bid Form.
- **Creditworthiness**: Bidders will be required to demonstrate creditworthiness or provide a credit alternative acceptable to Black Bayou. Bidders must be willing to provide additional credit information or evidence of creditworthiness requested by Black Bayou.

FOUNDATION CUSTOMER STATUS

A customer will be defined as a Foundation Customer if that customer participates in the Open Season and executes a binding PA with Black Bayou for FSS Service that: (A) has an MSQ of at least 4 BCF, (B) has a minimum primary term of at least ten (10) years, (C) includes that FSS Service may be provided by both Caverns 1 and 2 on a phased basis, with partial service commencing on the Cavern 1 in-service date and increasing on the Cavern 2 in-service date, and (D) has a Rate that is acceptable to Black Bayou for the economic viability and development of the Project. One Foundation Customer has executed a binding PA prior to this Open Season for 8 BCF of FSS Service for a 10-year term.

Foundation Customer benefits will include certain rights such as: term extension rights; exclusion from capacity allocation, except within the Foundation Customer class; most favored nation rate status with respect to certain qualifying non-Foundation Customer agreements; and the right to request that Black Bayou make additional storage capacity available in future caverns on a not unduly discriminatory basis.

BID EVALUATION PROCEDURES

Upon completion of the Open Season, Black Bayou will determine the order of priority among bids based on the highest economic value of each bid to Black Bayou and enter into negotiations to execute binding PAs with customers whose bids provided the highest economic value to Black Bayou.

Priority will be given first to bidders whose bids qualify for Foundation Customer status. Black Bayou will then determine the order of priority of remaining, non-Foundation Customer bids based on the highest economic value of each non-Foundation Customer bid, with the bids producing the highest economic value having the highest priority. Subject in all cases to the execution of binding PAs, capacity will be allocated first to Foundation Customers, with capacity among Foundation Customers being allocated on a pro rata basis and any remaining capacity will be allocated to other customers on a highest economic value basis. As part of the bid evaluation process, Black Bayou may expand the project design to include incremental caverns to support market interest received in this Open Season.

Black Bayou reserves the right to reject any requests for service on the project on a not unduly discriminatory basis. Black Bayou reserves the right to reject and remove from consideration non-conforming bids, or bids that do not conform to the phased basis of capacity availability as provided above, do not meet Black Bayou's creditworthiness requirements, or that include other contingencies unacceptable to Black Bayou, including bids that require a contract with a partial-year term, or bids that fail to meet the minimum terms set forth above with regard to contract term, MSQ, or any other economic criteria which could adversely affect the economics or operational viability of the project. Black Bayou reserves the right to define and maintain the economic viability of the Project in its sole discretion.

Bidders wishing to revise or withdraw their bids during the Open Season may do up until the close of the Open Season. Black Bayou reserves the right, but not the obligation, to request that bidders clarify bids containing ambiguous terms or terms that appear in error.

ADDITIONAL INFORMATION AND CONTACT INFORMATION

This non-binding Open Season is posted on the Black Bayou's website at www.blackbayouenergyhub.com and will conclude at **7:00 PM CDT on Thursday, June 27, 2024**. Black Bayou reserves the right in its sole discretion to extend, modify, cancel or terminate this Open Season, or waive any provision of the Open Season, during the Open Season by notice on its website.

Thank you for your interest in Black Bayou! Please do not hesitate to reach out to Dan Craig at DCraig@BlackBayouEnergyHub.com with any questions regarding Black Bayou's project, services offered or this Open Season.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Black Bayou Gas Storage, LLC) Docket No. CP24-___-000

PROTECTIVE AGREEMENT

This Protective Agreement is made and entered into effective as of the ___ day of _____, ("Effective Date") by and between Black Bayou Gas Storage, LLC, herein called "Black Bayou" and_____, herein called "Participant" (collectively Black Bayou and Participant are referred to herein as the "Parties").

WHEREAS, Black Bayou filed on July 17, 2024 an application for a certificate of public convenience and necessity to construct, own, and operate a new natural gas storage facility as further described in the application (referred to herein as the "Project"), and such filing requested privileged treatment for certain information pursuant to the regulations of the Federal Energy Regulatory Commission ("Commission" or "FERC"); and

WHEREAS, Participant has requested access to the Protected Materials solely for purposes of its review of the Project and for no other reason;

WHEREAS Participant desires to obtain access to the Protected Materials and has attached hereto the explanation and documentation as required by 18 C.F.R. § 388.112(b)(2)(iii) (2023) of the Commission's regulations; and

NOW, THEREFORE, in consideration of the mutual covenants and agreements contained herein, Black Bayou and Participant agree as follows:

1. This Protective Agreement shall govern the use of all Protected Materials produced by, or on behalf of, Black Bayou, in the above-captioned docket. Notwithstanding any order terminating this proceeding, this Protective Agreement shall remain in effect until the earlier of:

   (a) termination by mutual agreement of the Parties;
   (b) the effective date of a new Protective Order issued by a Presiding Administrative Law Judge ("Presiding Judge") (which includes the Chief Administrative Law Judge) or the Commission in trial-type hearing or settlement procedures in connection with adjudication of Black Bayou's July 17, 2024 filing, as set forth in 18 C.F.R. § 388.112(b)(2)(v) (2023); or
   (c) the effective date of a specific order of the Commission terminating this Protective Agreement.

   To the extent there is a conflict between the terms of this Protective Agreement and a subsequent Protective Order as set forth in Section 1(b) above, the terms of the subsequent Protective Order shall control.

2. This Protective Agreement applies to the following two categories of materials:

(a) Materials which customarily are treated by Black Bayou as sensitive or proprietary, which are not available to the public, and which, if disclosed freely, would subject Black Bayou or its customers to risk of competitive disadvantage or other business injury; and

(b) Materials which contain critical energy infrastructure information, as defined in 18 C.F.R. § 388.113(c)(2) (2023) ("Critical Energy Infrastructure Information" or "CEII").

3. Definitions – For purposes of this Protective Agreement:

(a) The term "**Protected Materials**" means:

(i) materials submitted to the Commission with Black Bayou's application for a certificate of public convenience and necessity for the Project in the above-captioned docket for which Black Bayou has requested privileged treatment pursuant to the Commission's regulations and any subsequent submissions by Black Bayou to the Commission in the above-captioned docket for which Black Bayou requests privileged treatment pursuant to the Commission's regulations;

(ii) materials designated by Black Bayou or Participant as protected;

(iii) any information contained in or obtained from such designated materials;

(iv) any other materials which are made subject to this Protective Agreement by the Commission, by any court or other body having appropriate authority, or by mutual written agreement of the Participants;

(v) copies of Protected Materials; and

(vi) any information or document contained in the files of the Commission that has been designated as Critical Energy Infrastructure Information.

The term "Protected Materials" shall not include (A) any information or document that has been filed with and accepted into the public files of the Commission, or contained in the public files of any other federal or state agency, or any federal or state court, unless the information or document has been determined to be protected by such agency or court, or (B) information that is public knowledge, or which becomes public knowledge, other than through disclosure in violation of this Protective Agreement; provided, however, notwithstanding anything else to the contrary in this Protective Agreement, a precedent agreement or any other agreement, term sheet, or other tangible record filed by Black Bayou in the above-captioned proceeding for which the requests privileged treatment pursuant to the Commission's regulations shall not be deemed to be contained in the public files of the Commission or any other federal or state agency, or to be public knowledge, solely because one or more precedent agreements (or portion thereof) or other agreements, term sheets, or other tangible records containing substantially similar terms or provisions between Black Bayou and one or more third parties have been disclosed publicly, including but not limited to, in the context of responding to data requests from the Commission in conjunction with its review of the Project and whether or not such disclosure occurred wrongfully.

Black Bayou or Participant, as applicable, producing the Protected Materials shall physically mark them on each page in accordance with 18 C.F.R. § 388.112(b) (2020), including labeling each page as "**CUI//PRIV- PRIVILEGED AND CONFIDENTIAL INFORMATION - DO NOT RELEASE**." If the Protected Materials contain CEII, Black Bayou or Participant, as applicable, producing such information shall mark on each page containing such information the words "**CUI//CEII- CRITICAL ENERGY INFRASTRUCTURE INFORMATION - DO NOT RELEASE**."

(b) The term "Notes of Protected Materials" means memoranda, handwritten notes, or any other form of information (including electronic form) which copies or discloses Protected Materials. Notes of Protected Materials are subject to the same restrictions as Protected Materials, except as specifically provided in this Protective Agreement.

(c) The terms "Non-Disclosure Certificate" and "Non-Disclosure Certificate for Protected Material Including Protected Material Marked as Not Available to Competitive Duty Personnel" shall mean the certificates annexed hereto which, once signed by a Reviewing Representative of Participant, will allow for access to Protected Materials and certifies Reviewing Representative's understanding that such access to Protected Materials is provided pursuant to the terms and restrictions of this Protective Agreement applicable to such materials, and that such Reviewing Representative has read the Protective Agreement and agrees to be bound by it.

(d) The term "**Reviewing Representative**" shall mean a person who has signed a Non-Disclosure Certificate and who is:

(i) an attorney who is listed as a representative for Participant on the intervention filed by or on behalf of Participant in this proceeding;
(ii) attorneys, paralegals, and other employees associated for purposes of this case with an attorney described in Paragraph 3(d)(i) above;
(iii) an expert or an employee of an expert retained by Participant for the purpose of advising, preparing for or testifying in this proceeding;
(iv) a person designated as a Reviewing Representative by order of the Commission; or
(v) employees or other representatives of Participant in this proceeding with significant responsibility for this docket, who are not otherwise disqualified to receive Protected Materials under the terms of this Protective Agreement.

4. Protected Materials shall be made available under the terms of this Protective Agreement only to Participant and only through its Reviewing Representative(s) as provided in Paragraphs 6-10.

5. Protected Materials shall remain available to Participant until the later of the date that an order terminating this proceeding becomes no longer subject to judicial review, or the date that any other Commission proceeding relating to the Protected Materials is concluded and no longer subject to judicial review. If requested to do so in writing after that date,

Participant shall, within fifteen days of such request, return the Protected Materials (excluding Notes of Protected Materials) to Black Bayou, or shall destroy the materials, except that copies of filings, official transcripts and exhibits in this proceeding that contain Protected Materials, and Notes of Protected Materials may be retained, if they are maintained in accordance with Paragraph 6 below. Within such time period, Participant, if requested to do so, shall also submit to Black Bayou an affidavit stating that, to the best of its knowledge, all Protected Materials and all Notes of Protected Materials have been returned or have been destroyed or will be maintained in accordance with Paragraph 6. To the extent Protected Materials are not returned or destroyed, they shall remain subject to the Protective Agreement and may not be used in any other proceeding, tribunal or case outside of the above-captioned docket.

6. All Protected Materials shall be maintained by Participant in a secure place. Access to those materials shall be limited to those Reviewing Representatives specifically authorized pursuant to Paragraphs 9-10. The Secretary shall place any Protected Materials filed with the Commission in a non-public file. By placing such documents in a non-public file, the Commission is not making a determination of any claim of privilege. The Commission retains the right to make determinations regarding any claim of privilege and the discretion to release information necessary to carry out its jurisdictional responsibilities. For documents submitted to Commission Trial Staff ("Staff"), Staff shall follow the notification procedures of 18 C.F.R. § 388.112 (2023) before making any Protected Materials public.

7. Protected Materials shall be treated as confidential by Participant and by its Reviewing Representative(s) in accordance with the Non-Disclosure Certificate(s) executed pursuant to Paragraph 9. Protected Materials shall not be used except as necessary for the conduct of this proceeding, nor shall they be disclosed in any manner to any person except a Reviewing Representative who is engaged in the conduct of this proceeding and who needs to know the information in order to carry out that person's responsibilities in this proceeding. Reviewing Representatives may make copies of Protected Materials, but such copies shall also become Protected Materials. Reviewing Representatives may make notes of Protected Materials, which shall be treated as Notes of Protected Materials if they disclose the contents of Protected Materials. Any personnel or representative of Participant who has reason to believe that any Reviewing Representative or other person has potentially violated the terms of the Protective Agreement shall immediately notify Black Bayou of any such potential violation in writing.

8. (a) If a Reviewing Representative's scope of employment includes: (i) the marketing, sale, or purchase of natural gas, natural gas transportation services, or natural gas storage services; (ii) the direct supervision of any employee or employees whose duties include the marketing, sale, or purchase of natural gas, natural gas transportation services, or natural gas storage services; (iii) the provision of consulting services to any person whose duties include the marketing, sale, or purchase of natural gas, natural gas transportation services, or natural gas storage services; or (iv) the provision of consulting services to any person whose duties include the direct supervision of any employee or employees whose duties include the marketing, sale, or purchase of natural gas, natural gas transportation services, or natural gas storage services; such Reviewing Representative may not use information contained in any Protected Materials obtained through this proceeding

to give Participant, Participant's affiliates, or any competitor of Black Bayou a commercial advantage.

(b) Subject to Paragraph 22 regarding access to Protected Materials that are marked as Not Available to Competitive Duty Personnel, in the event that Participant wishes to designate as a Reviewing Representative a person not described in Paragraph 3(d) above, the Participant shall seek agreement from Black Bayou. If an agreement is reached, that person shall be a Reviewing Representative pursuant to Paragraph 3(d) above with respect to those materials. If no agreement is reached, Participant may submit the disputed designation to the Commission for resolution.

9. (a) A Reviewing Representative shall not be permitted to inspect, participate in discussions regarding, or otherwise be permitted access to Protected Materials pursuant to this Protective Agreement unless that Reviewing Representative has first executed the appropriate Non-Disclosure Certificate; provided, that if an attorney qualified as a Reviewing Representative has executed such a certificate, the paralegals, secretarial and clerical personnel under the attorney's instruction, supervision or control need not do so. A copy of each Non-Disclosure Certificate shall be provided to counsel for Black Bayou prior to disclosure of any Protected Material to that Reviewing Representative.

(b) Attorneys qualified as Reviewing Representatives are responsible for ensuring that persons under their supervision or control comply with this Protective Agreement.

10. Any Reviewing Representative may disclose Protected Materials to any other Reviewing Representative as long as the disclosing Reviewing Representative and the receiving Reviewing Representative both have executed the appropriate Non-Disclosure Certificate and provided the Certificate to counsel for Black Bayou. In the event that any Reviewing Representative to whom the Protected Materials are disclosed ceases to be engaged in these proceedings, or is employed or retained for a position whose occupant is not qualified to be a Reviewing Representative under Paragraph 3(d), access to Protected Materials by that person shall be terminated. Even if no longer engaged in this proceeding, every person who has executed a Non-Disclosure Certificate shall continue to be bound by the provisions of this Protective Agreement and the certification.

11. Subject to Paragraphs 14-18, the Commission shall resolve any disputes arising under this Protective Agreement. Prior to presenting any dispute under this Protective Agreement to the Commission, Participants shall use their best efforts to resolve the dispute. If Participant contests Black Bayou's designation of materials as privileged, it shall notify Black Bayou in writing and specify the materials the designation of which is contested.

12. All documents reflecting Protected Materials, including the portion of any application, contract, pleading, exhibits, transcripts, briefs and other documents which contain or refer to Protected Materials, to the extent they will be filed with the Commission, shall be filed either (i) by hand in sealed envelopes or other appropriate containers endorsed to the effect that they are sealed pursuant to this Protective Agreement; or (ii) electronically on the Commission's website in accordance with the procedures for electronic filing of privileged material or CEII. Such documents shall be marked "**CUI//PRIV- PRIVILEGED AND CONFIDENTIAL INFORMATION - DO NOT RELEASE**" and shall be filed and

served in accordance with Commission regulations. Such documents containing Critical Energy Infrastructure Information shall be additionally marked "**CUI//CEII- CONTAINS CRITICAL ENERGY INFRASTRUCTURE INFORMATION - DO NOT RELEASE**." For anything filed by hand or electronically, redacted versions or, where an entire document is protected, a letter indicating such, will also be filed with the Commission and served in accordance with Commission regulations. Participant shall take all reasonable precautions necessary to assure that Protected Materials are not distributed to unauthorized persons.

13. Except in cases where release is ordered sooner by the Commission, Protected Materials that have been requested pursuant to this Protective Agreement will be provided within five days of receipt of the request satisfying 18 C.F.R. § 388.112(b)(2)(iii) (2023); provided, however, that if Black Bayou files an objection to such request with the Commission, Black Bayou is under no obligation to disclose the requested Protected Materials until ordered by the Commission or a decisional authority.

14. Nothing in this Protective Agreement shall be construed as precluding Black Bayou or Participant from objecting to the use of Protected Materials on any legal grounds.

15. Nothing in this Protective Agreement shall preclude Participant from requesting that the Commission, or any other body having appropriate authority, find that this Protective Agreement should not apply to all or any materials previously designated as Protected Materials pursuant to this Protective Agreement. The Commission may alter or amend this Protective Agreement as circumstances warrant at any time during the course of this proceeding. Participants may amend this Protective Agreement at any time by written mutual agreement without seeking Commission approval, unless such amendment is otherwise specifically prohibited by law.

16. Both Black Bayou and Participant have the right to seek changes in this Protective Agreement as appropriate from the Commission.

17. If the Commission finds at any time in the course of this proceeding that all or part of the Protected Materials need not be protected, those materials shall nevertheless, be subject to the protection afforded by this Protective Agreement until the date the Commission orders the materials be produced. Black Bayou reserves its rights to seek additional administrative or judicial remedies after the Commission's decision respecting Protected Materials or Reviewing Representatives, or the Commission's denial of any appeal thereof. The provisions of 18 C.F.R. §§ 388.112 and 388.113 (2023) shall apply to any requests under the Freedom of Information Act, 5 U.S.C. § 552, for Protected Materials in the files of the Commission.

18. Nothing in this Protective Agreement shall be deemed to preclude any Participant from independently seeking through discovery in any other administrative or judicial proceeding information or materials produced in this proceeding under this Protective Agreement,

19. Neither Black Bayou nor Participant waives the right to pursue any other legal or equitable remedies that may be available in the event of actual or anticipated disclosure of Protected Materials.

20. The contents of Protected Materials or any other form of information that copies or discloses Protected Materials shall not be disclosed to anyone other than in accordance with this Protective Agreement and shall be used only in connection with this (these) proceeding(s).

21. Black Bayou shall physically mark with the words "Not Available to Competitive Duty Personnel," any Protected Materials that Black Bayou believes in good faith would, if freely disclosed, subject Black Bayou, or third party, to risk of competitive disadvantage or other concrete business injury if provided to all Reviewing Representatives. Such information may include, but is not limited to (a) non-public business development, acquisition, or marketing data, plans or activities, (b) non-public strategic business or financial plans or activities, or (c) negotiations of services, prices and rates, the public disclosure of which such Participant in good faith believes would competitively harm the disclosing Participant or third party (hereafter "Competitively Sensitive Information"). Competitively Sensitive Information should customarily be treated as sensitive or proprietary and not be available to the public. Any challenge to such a designation may be made as provided in this Protective Agreement for challenges to designations of Protected Materials.

22. Solely with respect to Protected Materials that have been marked "Not Available to Competitive Duty Personnel" and information derived therefrom, a Reviewing Representative may not be any employee or agent of Participant whose duties include, on a consistent and regular basis, (1) the marketing, trading, sale, or purchase of natural gas, natural gas transportation services, or natural gas storage services (i) on Black Bayou or (ii) on a natural gas pipeline or storage facility in any region in which Black Bayou operates or (iii) for a shipper or prospective shipper on a natural gas pipeline or storage facility in any region in which Black Bayou operates; (2) management responsibility regarding, or the supervision of any employee whose duties include or may include, the marketing, trading, sale, or purchase of natural gas, natural gas transportation services, or natural gas storage services (i) on Black Bayou or (ii) on a natural gas pipeline or storage facility in any region in which Black Bayou operates or (iii) for a shipper or prospective shipper on any pipeline or storage facility in any region in which Black Bayou operates; (3) the provision of consulting services regarding the marketing, trading, sale, or purchase of natural gas, natural gas transportation services, or natural gas storage services for a pipeline or storage facility in any region in which Black Bayou operates or for a shipper or prospective shipper on Black Bayou or any pipeline or storage facility in any region in which Black Bayou operates; or (4) management responsibility regarding other strategic business activities in which use of Competitively Sensitive Information could be reasonably expected to cause competitive harm to Black Bayou or third party (collectively, "Competitive Duties").

Notwithstanding the above, in-house and/or outside counsel for Participant may serve as a Reviewing Representative; provided, however, that in-house and/or outside counsel shall not disclose any Competitively Sensitive Information to Competitive Duty Personnel. In the event that (a) any person who has been a Reviewing Representative subsequently is assigned to perform any Competitive Duties, or (b) previously available Protected Materials are changed to "Not Available to Competitive Duty Personnel," a Reviewing Representative involved in Competitive Duties shall have no access to Black Bayou's Protected Materials that are marked "Not Available to Competitive Duty Personnel" or information derived therefrom. Such Reviewing Representative shall immediately dispose of Black Bayou's Protected Materials in his/her possession that are marked "Not Available to Competitive

Duty Personnel" and information derived therefrom and shall continue to comply with the requirements of the Non-Disclosure Certificate Concerning Protected Material, Including Protected Material Marked As Not Available to Competitive Duty Personnel, and this Protective Agreement with respect to any Protected Materials to which such person previously had access.

Notwithstanding the foregoing, with respect to Protected Materials that have been marked "Not Available to Competitive Duty Personnel" and information derived therefrom, a Reviewing Representative may not be an employee of a FERC-regulated natural gas pipeline or storage facility in any region in which Black Bayou operates. Reviewing Representatives of such a pipeline or storage facility, with respect to Protected Materials that have been marked "Not Available to Competitive Duty Personnel", shall be limited to outside counsel and/or consultants, provided such individuals are not engaged in Competitive Duties, as defined above, on behalf of such pipeline or storage facility. Notwithstanding the foregoing, a person who otherwise would be disqualified as Competitive Duty Personnel may serve as a Reviewing Representative upon agreement of Black Bayou or, in the absence of such agreement, upon entry of an order of the Commission authorizing such person to serve as a Reviewing Representative. Any request for an agreement or order under the preceding sentence shall be subject to the following conditions: (i) Participant must certify in writing to Black Bayou that Participant's ability to participate effectively in this proceeding would be prejudiced if it was unable to rely on the assistance of the particular Reviewing Representative; (ii) Participant must identify by name and job title the particular Reviewing Representative required and must describe the person's duties and responsibilities; (iii) the Participant claiming such prejudice must acknowledge in writing to Black Bayou that access to the Protected Materials which are marked as Not Available to Competitive Duty Personnel shall be restricted only to such access necessary for the adjudication of this proceeding, absent prior written consent of Black Bayou or authorization of the Commission with opportunity for Black Bayou to seek review of such decision as provided in this order; (iv) Participant must acknowledge in writing that any other use of Protected Materials which are Not Available to Competitive Duty Personnel shall constitute a violation of this Protective Agreement; and (v) prior to having access to any Protected Materials which are marked as Not Available to Competitive Duty Personnel, the Competitive Duty Personnel who is authorized to act as a Reviewing Representative must execute and deliver to Black Bayou a Non-Disclosure Certificate Concerning Protected Material, Including Protected Material Marked As Not Available to Competitive Duty Personnel acknowledging his or her familiarity with the contents of this Protective Agreement and the particular restrictions set forth in this paragraph regarding such Protected Materials. Such agreement by Black Bayou shall not be unreasonably withheld, delayed or conditioned. Materials marked as "Not Available to Competitive Duty Personnel" shall be returned or destroyed at the conclusion of this proceeding as otherwise provided in this Protective Agreement.

23. If Black Bayou believes that Protected Materials that it previously disclosed to Reviewing Representative(s) contain Competitively Sensitive Information, public disclosure of which would competitively harm Black Bayou, and should be treated as if such Protected Materials had been labeled "Not Available to Competitive Duty Personnel," Black Bayou must notify Participant. Such notice must specifically identify the Protected Materials that contain such Competitively Sensitive Information, make an informal showing of why such information should be subject to the restrictions applicable to Protected Materials labeled

"Not Available to Competitive Duty Personnel," and must seek Participant's consent to treatment of the subject materials as "Not Available to Competitive Duty Personnel." Such consent shall not be unreasonably withheld, delayed or conditioned. If no agreement is reached concerning the designation of previously distributed Protected Material as "Not Available to Competitive Duty Personnel," Black Bayou may submit the dispute to the Commission. In the event that Black Bayou's previously distributed Protected Material is subsequently designated as "Not Available to Competitive Duty Personnel," it will be the responsibility of Participant to ensure compliance with this Protective Agreement after the additional designation; Black Bayou will not be responsible for redistributing or relabeling the affected Protected Materials.

FERC Docket No. CP24-___-000

Exhibit Z-2

Form of Federal Register Notice

(follows this cover sheet)

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Black Bayou Gas Storage, LLC **Docket No. CP24-___-000**

NOTICE OF APPLICATION FOR CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

( )

Take notice that on July [ ], 2024, Black Bayou Gas Storage, LLC ("Black Bayou"), 229 Heymann Blvd., Lafayette, LA 70503, filed with the Federal Energy Regulatory Commission ("Commission") an abbreviated application under Section 7 of the Natural Gas Act for a certificate of public convenience and necessity to construct and operate a new natural gas storage facility and appurtenant facilities (the "Project"). The Project will be located in Cameron and Calcasieu Parishes, Louisiana and consist of four (4) salt dome storage caverns, header pipelines, compression, and other facilities capable of providing high-deliverability natural gas storage capacity to customers in the Gulf Coast region. Black Bayou has requested that the Commission approve market-based rates for the Project. Black Bayou also has requested blanket certificates and certain limited waivers of the Commission's regulations.

The name, address, and telephone number of Black Bayou's authorized contact person is as follows: Tad Lalande; Black Bayou Gas Storage, LLC, 229 Heymann Blvd., Lafayette, LA 70503; (337) 541-1200.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at http://www.ferc.gov. Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426.

This filing is accessible on-line at http://www.ferc.gov, using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington,

DC. There is an "eSubscription" link on the web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email FERCOnlineSupport@ferc.gov, or call (866) 208-3676 (toll free). For TTY, call (202) 502-8659.

Comment Date: 5:00 pm Eastern Time on (insert date).

Debbie-Anne A. Reese,
Secretary.
